# OMRON Subminiature Basic Switch

## Economical, Subminiature Basic Switch Offers Long Life (30 x 10<sup>6</sup> Operations)

- Incorporating simple and stable two split springs which ensures a long service life (30,000,000 operations).
- A variety of models with low operating force to high operating force are available.
- Solder, quick-connect (#110) and PCB terminals are available.
- Models with a switching current of 10.1 A incorporate special contacts made of silver alloy that are tough and highly conductive.

Note: 1. Inductive load has a power factor of 0.4 min. (AC) and a time constant of 7 ms max. (DC).

2. Lamp load has an inrush current of 10 times the steady-state current.

3. Motor load has an inrush current of 6 times the steady-state current.

4. Data in parentheses apply to the SS-10 series only.

5. If the switch is used in a DC circuit and is subjected to a surge, connect a surge suppressor across the switch.

Note: Values in brackets are possible when the switch is mounted so that the weight of the lever will not be imposed on the plunger.

# Precautions

#### Mounting

Use two M2.3 mounting screws with spring washers to mount the switch. Tighten the screws to a torque of 0.23 to 0.27 N  $\cdot$  m (2.3 to 2.7 kgf  $\cdot$  cm).

#### **Mounting Holes**

#### Actuating

For the secure operation, 60% to 90% of rated overtravel should be maintained.

#### Spacing

Switch does not have a ground terminal. The minimum thickness of insulation according to IEC1058-1 is 1.1 mm, and the minimum clearance between live terminals and mounting plate is 1.6 mm. If the proper insulation for the terminator cannot be obtained, add insulation such as a separator or insulation cover on the switch.

#### Soldering

When soldering switch terminals, apply a soldering iron rated at 60 W max. and finish soldering quickly within 5 seconds. During soldering and 1 minute after soldering, do not apply external force to the terminals. Solder terminals are provided with a hole for the mechanical mounting of a conductor.

Conductors for the soldering terminal should be flexible and its cross-section should be 0.5 to 0.75 mm<sup>2</sup> for the SS-5 series and 0.75 mm<sup>2</sup> for the SS-10 series.

#### Others

If a surge current or inrush current is involved in a DC circuit, it is recommended to use a cancellation circuit.

ALL DIMENSIONS SHOWN ARE IN MILLIMETERS. To convert millimeters into inches, multiply by 0.03937. To convert grams into ounces, multiply by 0.03527.
