

FEATURES

- Wide Operating Current Range
60 μ A to 150mA
- Low Dynamic Output Impedance
0.25 Ω Typ.
- Low Temperature Coefficient
 ≤ 40 ppm/ $^{\circ}$ C
- Trimmed Bandgap Design $\pm 0.25\%$
- Direct Replacement for TL431

APPLICATIONS

- Linear Regulators
- Adjustable Supplies
- Switching Power Supplies
- Battery Operated Computers
- Instrumentation
- Computer Disk Drives

DESCRIPTION

The SC431 is a three terminal adjustable shunt regulator. The SC431's thermal stability is guaranteed over the temperature range. The output voltage may be adjusted to any value between Vref and 36 volts with two external resistors. The SC431 has a typical dynamic output impedance of 0.25 Ω . Active output circuitry provides a very sharp turn on characteristic, making the SC431 an excellent replacement for Zener diodes.

ORDERING INFORMATION

SOT Package Marking Information

Since the SOT packages can only have 3 characters for marking, a code must be used for the part identification and specifications. Three fields are defined below to explain the various combinations of product markings.

Field 1

E = Adj. Reference
D = Diode Reference
T = Low Tempco Diode Ref.

Field 2

A = 1.25 volts
B = 2.5 volts
C = 3.3 volts
D = 2.55 volts
E = 5 volts
F = 10 volts

Field 3

0 = $\pm 0.25\%$
1 = $\pm 0.5\%$
2 = $\pm 1.0\%$
3 = $\pm 2.0\%$
4 = $\pm 3.0\%$
5 = $\pm 5.0\%$

Example: adjustable voltage reference @ 2.5 volts and $\pm 0.5\%$ initial tolerance is represented by the 3 character (field) marking scheme "E|B|1."
