

OPTi Notebook Frequency Generator

General Description

The AV9154-06 is a low cost frequency generator designed for general purpose PC and disk drive applications. Its CPU clocks provide all necessary frequencies for 286, 386 and 486 systems, including support for the latest speeds of processors. The standard devices use a 14.318 MHz crystal to generate the CPU and peripheral clocks for integrated desktop and notebook motherboards.

The AV9154-06 is specifically designed for use with OPTi core logic chip sets. The only noticeable difference between the two parts is in their CPU clock selection tables as shown on page three.

The AV9154-06 can operate at $5.0V \pm 10\%$ or $3.3V \pm 10\%$, but the CPU frequencies are limited (see the asterisks on the selection tables on page three) during 3.3V operation. The parts have two power-down pins. One shuts off the CPU clock to a low state when the power-down pin is taken high, and the other turns off the 14.318 MHz output in the same manner.

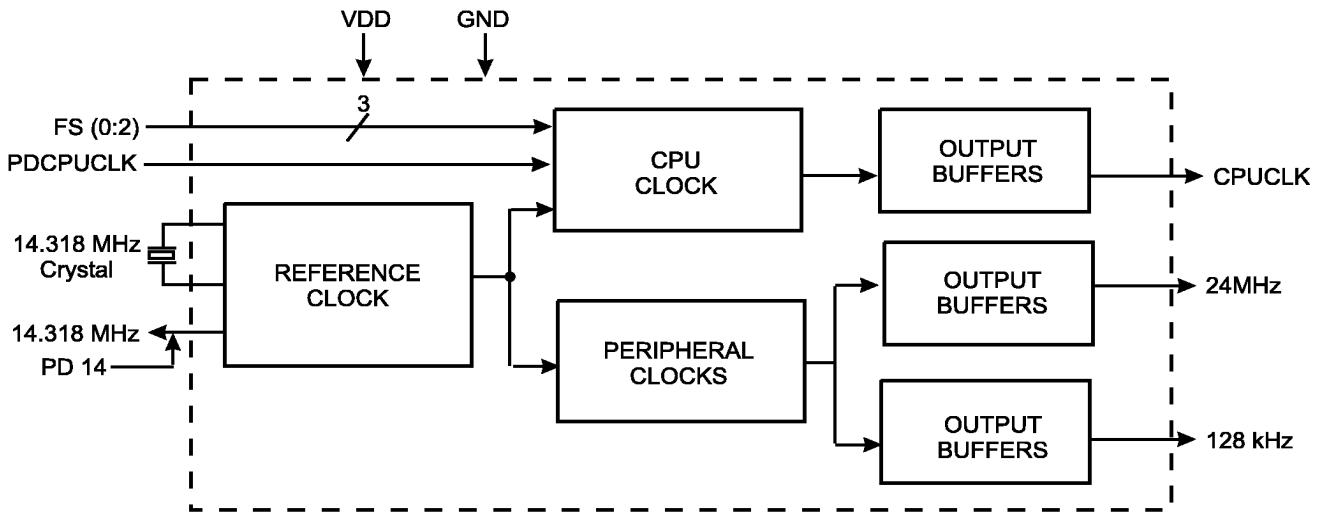

Features

- Compatible with 286, 386, and 486 CPUs
- Up to 66.6 MHz (-60) or 80 MHz (-06) CPU clocks
- All loop filter components internal
- 3V and 5V operation
- 16-pin 150-mil SOIC
- Power-down control of CPU clock

Applications

Computer Motherboards: The AV9154-06 replaces crystals and oscillators, saving board space, component cost, part count and inventory costs. It produces switchable CPU clock and up to four fixed clocks to drive floppy disk, communications, super I/O, bus and/or keyboard devices. The small package and 3V operation is perfect for handheld computers.

Pin Descriptions

PIN NUMBER	PIN NAME	TYPE	DESCRIPTION
1	FS0	I	Frequency Select 0 for CPUCLK.
2	X2	O	Crystal out. Connect a 14.318 MHz crystal to this pin.
3	X1	I	Crystal in. Connect a 14.318 MHz crystal to this pin.
4	VDD	P	Digital Power (+3.3V or +5V).
5	GND	P	Digital Ground.
6	24 MHz	O	24 MHz clock output.
7	128 kHz	O	128 kHz clock output.
8	AGND	P	Analog Ground.
9	PD14	I	Power-down 14.318 MHz output (active high).
10	PDCPUCLK	I	Power-down CPU clock (active high).
11	14.318 MHz	O	14.318 MHz reference clock output.
12	GND	P	Digital Ground.
13	VDD	P	Digital Power (+3.3V or +5V).
14	CPUCLK	O	CPU Clock output determined by status of FS0 - FS2.
15	FS2	I	Frequency Select 2 for CPUCLK.
16	FS1	I	Frequency Select 1 for CPUCLK.

Note: No internal pull-ups on any Inputs.

Absolute Maximum Ratings

VDD referenced to GND	7V
Operating temperature under bias.....	0°C to +70°C
Storage temperature	-40°C to +150°C
Voltage on I/O pins referenced to GND.....	GND -0.5V to VDD +0.5V
Power dissipation	0.5 Watts

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.
