## Application Information

A  $1\mu F$  (or larger) capacitor is recommended between  $V_{OUT}$  and GND for stability. The part may oscillate without the capacitor. Any type of capacitor can be used, but not Aluminum electrolytes when operating below  $-25^\circ C$ . The capacitance may be increased without limit.

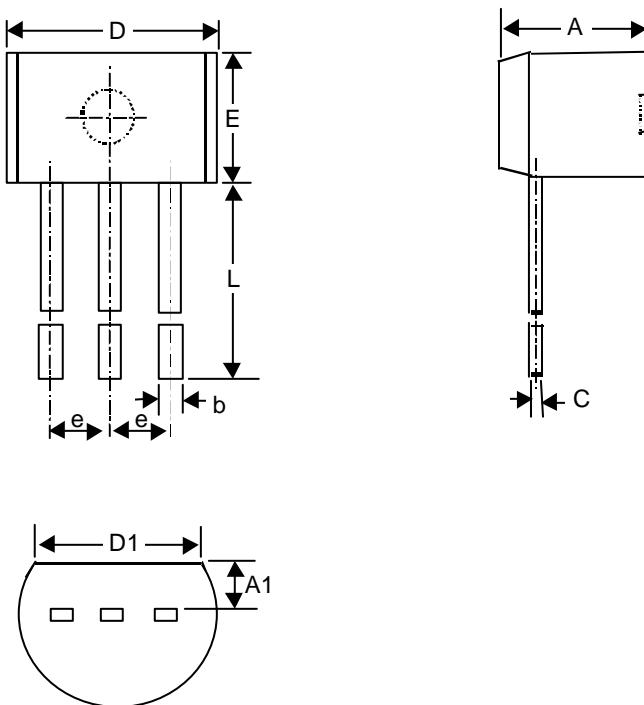

A  $1\mu F$  capacitor (or larger) should be placed between  $V_{IN}$  to GND.
