

## RA003-Series Power Modules: 8.0 Vdc to 16.5 Vdc Inputs; 3 W

### Features

- Small size: 1.75 in. x 0.43 in. x 0.81 in.
- Low output noise
- Constant frequency
- High efficiency: 77% to 83% typical
- UL recognized

### Options

- Right angle leads

### Applications

- Distributed power architectures
- Telecommunications

The RA003-Series Power Modules use advanced, surface-mount technology and deliver high-quality, compact, dc-dc conversion at an economical price.

### Description

The RA003A, B, C, BK, and CL Power Modules are dc-dc converters that operate over an input-voltage range of 8.0 Vdc to 16.5 Vdc and provide precisely regulated 5 V, 12 V, 15 V,  $\pm 12$  V, and  $\pm 15$  V outputs respectively. The outputs are isolated from the inputs, allowing versatile polarity configurations and grounding connections. The modules have maximum power ratings of 3 W at a typical full-load efficiency of 77% to 83%.

The RA003-Series is available with standard straight terminals or with a 90° bend in the terminals for lower profile mounting. This right angle lead form option is shown in the Outline Diagram and the part numbers are listed in the Ordering Information section at the end of this data sheet.

The modules are PC board mountable and encapsulated in nonconductive cases. The modules are rated to full load at 50 °C case temperature with no external filtering.

## Absolute Maximum Ratings

Stresses in excess of the Absolute Maximum Ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operations sections of the data sheet. Exposure to Absolute Maximum Ratings for extended periods can adversely affect device reliability.

| Parameter                  | Symbol    | Min | Max | Unit |
|----------------------------|-----------|-----|-----|------|
| Input Voltage Continuous   | $V_i$     | —   | 25  | V    |
| I/O Isolation Voltage      | —         | —   | 500 | V    |
| Operating Case Temperature | $T_c$     | -10 | 50  | °C   |
| Storage Temperature        | $T_{stg}$ | -30 | 80  | °C   |

## Electrical Specifications

Unless otherwise indicated, specifications apply over all operating input voltage, resistive load, and temperature conditions.

**Table 1. Input Specifications**

| Parameter   | Symbol       | Min | Typ | Max  | Unit             |
|---|--------------|-----|-----|------|------------------|
| Operating Input Voltage   | $V_i$        | 8.0 | 12  | 16.5 | Vdc              |
| Maximum Input Current<br>( $V_i = 0$ V to 16.5 V; $I_o = I_{o, max.}$ )   | $I_{i, max}$ | —   | —   | 0.35 | A                |
| Inrush Transient  | $i^2t$       | —   | —   | TBD  | A <sup>2</sup> s |
| Input Reflected-ripple Current, Peak-to-peak<br>(5 Hz to 20 MHz, 12 $\mu$ H source impedance;<br>$T_c = 25$ °C) | —            | —   | TBD | —    | mA p-p           |
| Input Ripple Rejection (120 Hz)   | —            | —   | TBD | —    | dB               |

## Fusing Considerations

**CAUTION: This power module is not internally fused. An input line fuse must always be used.**

This encapsulated power module can be used in a wide variety of applications, ranging from simple stand-alone operation to an integrated part of a sophisticated power architecture. To preserve maximum flexibility, internal fusing is not included; however, to achieve maximum safety and system protection, always use an input line fuse. The *Underwriters Laboratories Conditions of Acceptability* requires a normal-blow, dc fuse with a maximum rating of 1 A in series with the input. Based on the information provided in this data sheet on inrush energy and maximum dc input current, the same type of fuse with a lower rating can be used. Refer to the fuse manufacturer's data for further information.

**Electrical Specifications** (continued)

**Table 2. Output Specifications**

| Parameter  | Device    | Symbol              | Min    | Typ    | Max    | Unit   |
|--|-----------|---------------------|--------|--------|--------|--------|
| Output Voltage<br>(Over all operating input voltage, resistive load, and temperature conditions until end of life.)  | RA003A    | $V_o$               | 4.75   | —      | 5.25   | Vdc    |

| Weight  | —   | —   | TBD | oz.(g) |

## Test Configurations

Note: Input reflected-ripple current is measured with a simulated source impedance of 12 µH. Capacitor Cs offsets possible battery impedance. Current is measured at the input of the module.

**Figure 1. Input Reflected-Ripple Test Setup**

Note: All measurements are taken at the module terminals. When socketing, place Kelvin connections at module terminals to avoid measurement errors due to socket contact resistance.

$$\eta = \left( \frac{[V_o(+)] - [V_o(-)]}{[V_i(+)] - [V_i(-)]} \right) \times 100$$

**Figure 2. Output Voltage and Efficiency Measurement Test Setup**

## Design Considerations

### Input Source Impedance

The power module should be connected to a low ac-impedance input source. Highly inductive source impedances can affect the stability of the power module.

## Feature Descriptions

### Current Limit

To provide protection in a fault (output overload) condition, the unit is equipped with internal current-limiting circuitry and can endure current limiting for an unlimited duration. At the point of current-limit inception, the unit shifts from voltage control to current control. If the output voltage is pulled very low during a severe fault, the current-limit circuit exhibits foldback characteristics (output-current decreases). The unit operates normally once the output current is brought back into its specified range.

# RA003-Series Power Modules: 8.0 Vdc to 16.5 Vdc Inputs; 3 W

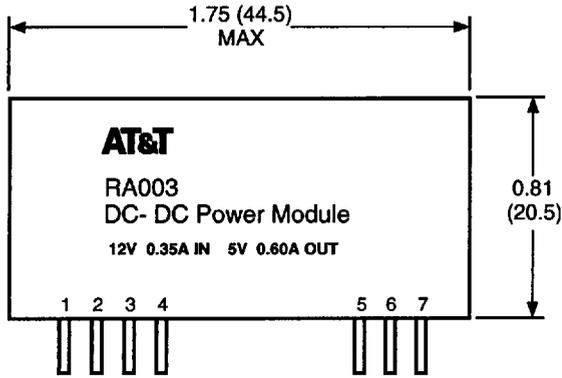

## Outline Diagram

Dimensions are in inches and (millimeters).

Copper paths must not be routed beneath the power module standoffs.

Tolerances: x.xx ± 0.02 in. (0.5 mm), x.xxx ± 0.010 in. (0.25 mm)
