

AN6477FBP

Speech Network IC Incorporating Cross-Point Switch

■ Overview

The AN6477FBP is a speech network IC which includes a transmitter/receiver noise reducing function and is suitable for quality cordless telephones. It incorporates a cross-point switch controlled by serial input. It allows speech path switching and mixing, and provides for three- or four-person communication and other sophisticated functions. It also incorporates REC/PLAY amplifiers with VOX circuits.

■ Features

- The speech block can operate on line voltage, with no external power supply, and is operational even during a commercial power failure.
- Incorporates a transmitter/receiver noise reducing function to improve the handset's howling margin (transmitter noise reduction can be turned ON and OFF from outside).
- Incorporates auto. PAD, dial mute, DC voltage regulation, and other basic speech functions.
- The cross-point switch can be operated independently.
- Each output of the cross-point switch can correspond to multiple inputs, allowing three- or four-person communication.
- The REC/PLAY amplifiers incorporate ALC and VOX circuits.
- Receiver volume can be increased by 6dB or 9dB.

■ Pin Descriptions

Pin No.	Pin name	Pin No.	Pin name
1	Ground	33	RF2 link output
2	Line power (+) input	34	RF1 link output
3	Side-tone adjustment	35	Intercom link output
4	Line voltage control (1)	36	VOX detection control
5	Int. ref. voltage output (2)	37	VOX amp. input
6	Int. ref. voltage output (1)	38	Time stamp link output
7	Trans. preamp. output	39	Recording link output
8	Noise reduction detection output	40	ALC input
9	Noise reduction detection input	41	ALC detection control
10	Noise reduction amp. output	42	Loudspeaker link input
11	Auto. PAD control	43	Recording input
12	Rec. preamp. input	44	Recording inverting input
13	Rec. preamp. output	45	Recording preamp. output
14	Rec. amp. input	46	Recording bias current control
15	Rec. amp. output (1)	47	To recording head
16	Rec. amp. output (2)	48	EQ amp. inverse input
17	BT signal input	49	EQ amp. output
18	DTMF preamp. output	50	REC/PLAY int. ref. voltage output
19	DTMF signal input	51	Ground
20	MIC preamp. output	52	MIX preamp. output
21	MIC preamp. input (1)	53	MIX link input
22	MIC preamp. input (2)	54	AUX preamp. output
23	Dial mute control	55	AUX link input
24	Line voltage control	56	Intercom link input
25	Trans. noise reduction control	57	RF1 link input
26	Strobe signal input	58	RF2 link input
27	Clock signal input	59	Power-ON reset control
28	Data input	60	External supply voltage input
29	Ground	61	Internal supply voltage output
30	Logic power supply input	62	Circuit voltage control (2)
31	VOX detector output	63	Line current bypass (2)
32	SP link output	64	Line current bypass (1)

■ Absolute Maximum Ratings ($T_a=25^\circ\text{C}$)

Parameter	Symbol	Rating	Unit
Supply voltage (1)	V_{CC}	7.0	V
Supply current (1)	I_L	12.0	V
Supply voltage (2)	I_{CC}	50	mA
Supply current (2)	I_L	135	mA
Power dissipation ^{Note}	P_D	619	mW
Operating ambient temperature	T_{opr}	-20 to +75	°C
Storage temperature	T_{stg}	-55 to +150	°C

Note) In a free-air condition with $T_a = 75^\circ\text{C}$.

DC voltage control Low level voltage	V_{DCC-L}		-0.2	—	0.4	V
DC voltage control Low level control current	I_{DCC-L}	$V-DCC=0V$	-2	-0.1	—	μA
Trans. noise reduction High level voltage	V_{NLT-H}		2	—	$V_{cc}+0.2$	V
Trans. noise reduction High level control current	I_{NLT-H}	$V-NLT=5V$	10	25	50	μA
Trans. noise reduction Low level voltage	V_{NLT-L}		-0.2	—	0.4	V
Trans. noise reduction Low level control current	I_{NLT-L}	$V-NLT=0V$	-2	-0.1	—	μA

Note) Unless otherwise specified, external supply voltage $V_{cc}=5V$, line current $I_L=0mA$, input signal frequency $f_{in}=1kHz$, control voltage $V-DCC=High$, and control voltage $V-DMC=High$.

Note 2) Each amp. gain is measured from MIC OUT or R PRE OUT to its output.

■ Electrical Characteristics (cont.) ($T_a = 25 \pm 2^\circ C$)

Parameter	Symbol	Condition	min	typ	max	Unit
Controls (cont.)						
Data input high level voltage	V_{DIN-H}		2	—	$V_{CC} + 0.2$	V
Data input high level control current	I_{DIN-H}	$V - DIN = 5V$	70	160	250	μA
Data input low level voltage	V_{DIN-L}		-0.2	—	0.3	V
Data input low level control current	I_{DIN-L}	$V - DIN = 0V$	-1	-0.1	—	μA
Power supply block						
AC impedance (I)	Z_{AC-I}	$I_L = 80mA, V_{CC} = 0V$ $V_{in} = 200mVRms, f_{in} = 1kHz$	450	570	750	Ω
AC impedance (E)	Z_{AC-E}	$I_L = 80mA, V_{CC} = 5V$ $V_{in} = 200mVRms, f_{in} = 1kHz$	450	580	750	Ω
Input impedance						
BT amp. input impedance	Z_{in-BT}	Pin ⑯ input	8.7	9.7	10.7	$k\Omega$
ALC amp. input impedance	Z_{in-ALC}	Pin ⑩ input	8.5	9.5	10.5	$k\Omega$
Intercom preamp. input impedance	Z_{in-DH}	Pin ⑬ input	8.5	9.5	10.5	$k\Omega$
RF1 preamp. input impedance	Z_{in-RF1}	Pin ⑭ input	8.5	9.5	10.5	$k\Omega$
RF2 preamp. input impedance	Z_{in-RF2}	Pin ⑮ input	8.5	9.5	10.5	$k\Omega$

■ Electrical Characteristics (Design Values for Reference) ($T_a = 25 \pm 2^\circ C$)

The following are design values for reference, and not guaranteed values.

Parameter	Symbol	Condition	min	typ	max	Unit
Speech block						
Rec. output noise voltage (I)	V_{n-IR}	$I_L = 30mA, V_{CC} = 0V$ DIN/AUDIO	—	0.3	—	mVRms
Rec. output noise voltage (E)	V_{n-ER}	$I_L = 30mA, V_{CC} = 5V$ DIN/AUDIO	—	0.3	—	mVRms
Trans. output noise voltage (I)	V_{n-IT}	$I_L = 30mA, V_{CC} = 0V$ DIN/AUDIO	—	0.3	—	mVRms
Trans. output noise voltage (E)	V_{n-ET}	$I_L = 30mA, V_{CC} = 5V$ DIN/AUDIO	—	0.3	—	mVRms
Dial mute trans. amp. mute attenuation	M_{-TDM}	$I_L = 30mA, V_{CC} = 5V$ $V_{in} = -30dBm, V - DBM = H/L$	—	75	—	dB
Trans. preamp. mute attenuation	M_{-TM}	$I_L = 30mA, V_{in} = -30dBm,$ $V_{CC} = 5V, L_{SW} (h3f) = OFF/ON$	—	70	—	dB
Rec. output mute attenuation	M_{-RO}	$I_L = 30mA, V_{in} = -30dBm,$ $V_{CC} = 5V, L_{SW} (h27) = OFF/ON$	—	50	—	dB
Rec. preamp. input impedance	Z_{in-R}	Pin ⑫ input	—	500	—	$k\Omega$
MIC preamp. input impedance	Z_{in-M}	Pin ⑯ and ⑰ input	—	500	—	$k\Omega$
REC/PLAY block						
ALC amp. ALC width	W_{-ALC}	$I_L = 0mA, V_{CC} = 5V$ and ALC output distortion $\leq 2\%$	—	40	—	dB
ALC amp. ALC effect	Δ_{ALC}	$I_L = 0mA, V_{CC} = 5V$ $V_{in} = -45dBm$ to $-20dBm$	—	1	—	dB
Rec. amp. mute attenuation	M_{-REC}	$V_{CC} = 5V, V_{in} = -10dBm$ $I_L = 0mA, L_{SW} (h07) = ON/OFF$	—	80	—	dB

■ Electrical Characteristics (Design Values for Reference) (cont.) ($T_a = 25 \pm 2^\circ\text{C}$)

The following are design values for reference, and not guaranteed values.

Parameter	Symbol	Condition	min	typ	max	Unit
EQ amp. mute attenuation	M_{-EQ}	$V_{CC} = 5\text{V}$, $V_{in} = -30\text{dBm}$ $I_L = 0\text{mA}$, LSW (h0F) = ON/OFF	—	80	—	dB
Rec. preamp. input impedance	Z_{in-REC}	Pin ④ input	—	10	—	$\text{k}\Omega$
EQ amp. input impedance	Z_{in-EQ}	Pin ⑦ and ⑧ input	—	500	—	$\text{k}\Omega$
VOX amp. input impedance	Z_{in-VOX}	Pin ⑨ input	—	500	—	Ω
Link switch						
Link SW mute attenuation	M_{-LS}	$V_{CC} = 5\text{V}$, $I_L = 30\text{mA}$, AC output measured at link ON/OFF,	—	75	—	dB
MIX preamp. input impedance	Z_{in-MIX}	Pin ⑩ input	—	500	—	$\text{k}\Omega$
AUX preamp. input impedance	Z_{in-AUX}	Pin ⑪ input	—	500	—	$\text{k}\Omega$
CPC output impedance	$Z_{out-CPC}$	Pin ⑫ input	—	100	—	$\text{k}\Omega$
Noise reduction amp. input impedance	Z_{in-NL}	Pin ⑬ input	—	45	—	Ω

Time Charts (assuming the address h26 latch is to be set)

1. Data is read into the shift register in synchronization with a rising edge of the clock, with the higher data being shifted sequentially on a first-come highest-bit basis.
2. When the strobe is low, data is shifted sequentially on the shift register in synchronization with the clock. Data on the latch circuit will not change.
3. When the strobe goes high, the latched data whose address is represented by the highest six bits of the shift register is updated. Latched data is set when the least significant bit is 1, and reset when the bit is 0.
4. Referring to 3 above, if the address is h00 (the highest six bits of the shift register are all 0s), the latch circuit is cleared (all reset) regardless of the data content.
5. At power-on (V_{CC} ON), the latch circuit is cleared (by power-ON reset).

■ Logic Circuits Address Specifications

1. Cross-point switch

Output Input	Handset rec.	Line output	Loudspeaker	Intercom	RF1	RF2	Recording	Time stamp
Loudspeaker			02					
Microphone		09	0A	0B	0C	0D	0E	
Receiver	10		12		14	15	16	
Intercom	18		1A		1C	1D	1E	
RF1	20	21		23		25	26	
RF2	28	29		2B	2C		2E	
MIX	30	31	32	33	34	35		37
AUX	38	39	3A	3B	3C	3D	3E	

Note) Empty space means "not applicable." Address is in hexadecimal.

2. Other control switches

Address	Description
00	Cross-point SW all reset
07	Recording amp. ON
0F	Playing amp. ON
17	Receiver volume 6 dB up
1F	Receiver volume 9 dB up
27	Handset receiver amp. mute
2F	SP output amp. gain 12 dB down
3F	MIC preamp. mute
09, 21, 29	Receiver noise reduction is enabled.

Note) Address is in hexadecimal.
