ALTERNISTOR TRIACS

(15 - 40 AMPS)

GENERAL DESCRIPTION

Teccor offers bidirectional alternistors with current ratings from 15 to 40 amperes with voltages from 200 to 800 volts as part of Teccor's broad line of thyristors. Teccor's alternistor has been specifically designed for applications which are required to switch highly inductive loads. To accomplish this, a special chip has been designed which effectively offers the same performance as two thyristors (SCRs) wired inverse parallel (back-to-back); hence, the alternistor has better turn-off behavior than a standard triac. An alternistor may be triggered from a blocking to conduction state for either polarity of applied AC voltage with operating modes in Quadrants I, II, and III.

This new chip construction provides two electrically separate SCR structures, providing enhanced dv/dt characteristics while retaining the advantages of a single chip device.

All alternistors have glass-passivated junctions to ensure long term reliability and parameter stability. Teccor's glass offers a reliable barrier against junction contamination.

These alternistors are offered in three basic package configurations: TO-218X, TO-218AC, and TO-220AB. Teccor's

TO-218X package has been designed for heavy, steady power-handling capability. The TO-218X features large eyelet terminals for ease of soldering heavy gauge hook-up wire. All the isolated packages have a standard isolation voltage rating of 2500V_{RMS}.

Variations of devices covered in this data sheet are available for custom design applications. Please consult factory for further information.

Features

- High Surge Current Capability
- Glass-Passivated Junctions
- 2500VAC Isolation for "L," "J,"and "K" Packages
- High Commutating dv/dt
- High Static dv/dt

GENERAL NOTES

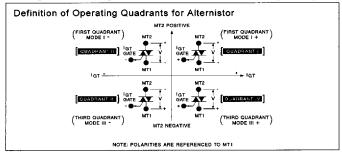

- All measurements are made at 60Hz with a resistive load at an ambient temperature of +25°C unless specified otherwise.
- Operating temperature range (T_J) is -40°C to +125°C except 0°C to +125°C for FastPaks.
- Storage temperature range (T_S) is -40°C to +125°C except -20°C to +125°C for FastPaks.
- Lead solder temperature is a maximum of 230°C for 10 seconds maximum ≥ 1/16" (1.59mm) from case.
- The case temperature (TC) is measured as shown on the dimensional outline drawings. See "Package Dimensions" section of this catalog on Page 96.

GATE CHARACTERISTICS

Teccor alternistors may be gated with in-phase signals (using standard AC line) in which Quadrants I & III are used, or by applying unipolar pulses (gate always positive or negative), where if a negative pulse is applied, Quadrants II & III are used. In all cases, if maximum surge capability is required, pulses should be a minimum of one magnitude above minimum $I_{\rm GT}$ rating with a steep rising waveform (1µs rise time.)

ELECTRICAL ISOLATION

Teccor isolated Alternistor packages will withstand a minimum high potential test of 2500 VAC (RMS) from leads to mounting tab, over the operating temperature range of the device. See isolation table for standard and optional isolation ratings.

NOTES TO ELECTRICAL SPECIFICATIONS

- 1. For either polarity of MT2 with reference to MT1 terminal.
- For either polarity of gate voltage (V_{GT}) with reference to MT1 terminal.
- See Definition of Quadrants.
- See Figures 1A and 1B for current rating at specific operating temperature.
- See Figure 3 for I_T and V_T.
- 8. See Figure 5 for V_{GT} vs T_{C} .
- 7. See Figure 4 for I_{GT} vs T_{C} .
- 8. See Figure 6 for IH vs Tc.
- See Figure 7 for for surge rating with specific durations.

- 10. See Figure 8 for tgt vs IGT.
- 11. See package outlines for lead form configurations. When ordering special lead forming, add type number as suffix to part number.
- 12. Initial on-state current = 400 mA(DC).
- See Figures 1(A and B) for maximum allowable case temperature at maximum rated current.
- 14. Pulse width ≤ 10μs.
- 15. $R_L = 30\Omega$.
- 16. 40 Amp pin terminal leads on K & M packages can run 100°C to 125°C.
- 17. Alternistor does not turn on in Quadrant IV.
- 18. T_C = T_J for test conditions in off-state
