

AN3932S

FM Signal Processor IC for VCR FM Audio

Overview

The AN3932S is an IC developed as a Hi-Fi VCR FM audio signal processor. This IC has high-frequency signal processing functions including FM modulation and demodulation. In combination with the noise reduction IC AM3972FC, it performs all the FM audio signal processings for Hi-Fi VCR.

Features

- Operating supply voltage : 5V (typ.) .
- Current consumption : 27mA at Rec, 45mA at PB.
- Built-in low drift VCO circuit.
- Built-in Rec and RFLPF (14th order) .
- Built-in dropout detector.
- Built-in high-performance auto linear switching circuit.
- Built-in hold circuit.
