

AN1084, AN1084S

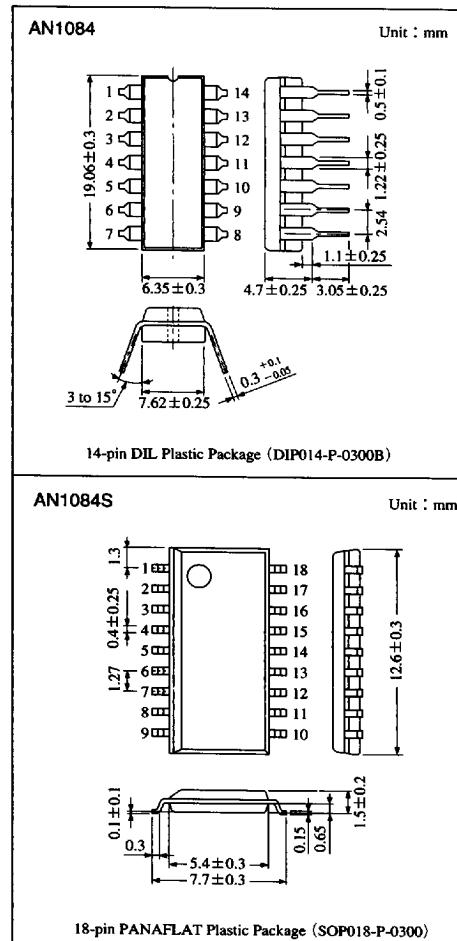

Quadruple J-FET Input Operational Amplifiers

■ Overview

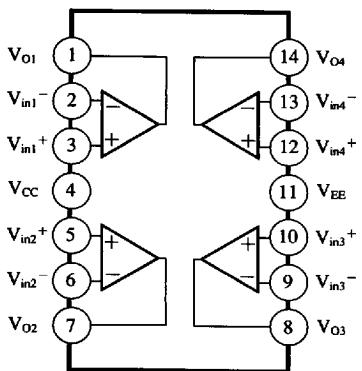

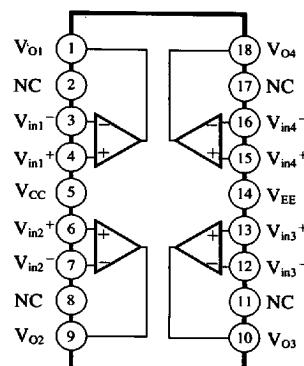

The AN1084 and the AN1084S are quadruple operational amplifiers with input stages consisting of P-ch J-FET adopting the ion implantation process, realizing high speed response, high input impedance and low input bias current. Therefore, they can be applied widely to general control equipment and medical equipment such as integrators, sample & hold circuits and high input impedance buffers.

■ Features

- High slew rate : SR = 11V/ μ s typ.
- Low input bias current : I_{bias} = 30pA typ.
- Low offset current : I_O = 5pA typ.
- High impedance : 10¹² Ω
- High voltage gain : G_V = 106dB typ.
- Wide range of supply voltage : $\pm 5V$ to $\pm 18V$
- Phase compensation circuit built-in
