

# Am2946/Am2947

Octal Three-State Bidirectional Bus Transceivers

## DISTINCTIVE CHARACTERISTICS

- 8-bit bidirectional data flow reduces system package count
- 3-state inputs/outputs for interfacing with bus-oriented systems; PNP inputs reduce input loading
- $V_{CC} - 1.15V_{OH}$  interfaces with TTL, MOS and CMOS
- 48mA, 300pF bus drive capability; Low power – 8mA per bidirectional bit
- Am2946 inverting transceivers; Am2947 noninverting transceivers; Transmit/Receive and Chip Disable simplify control logic
- Bus port stays in hi-impedance state during power up/down

## GENERAL DESCRIPTION

The Am2946 and Am2947 are 8-bit state Schottky transceivers. They provide bidirectional drive for bus-oriented microprocessor and digital communications systems. Straight through bidirectional transceivers are featured, with 24mA drive capability on the A ports and 48mA bus drive capability on the B ports. PNP inputs are incorporated to reduce input loading.

One input, Transmit/Receive, determines the direction of logic signals through the bidirectional transceiver. The Chip Disable input disables both A and B ports by placing them in a 3-state condition. Chip Disable is functionally the same as an active LOW chip select.

The output high voltage ( $V_{OH}$ ) is specified at  $V_{CC} - 1.15V$  minimum to allow interfacing with MOS, CMOS, TTL, ROM, RAM, or microprocessors.

## ORDERING INFORMATION

AMD products are available in several packages and operating ranges. The order number is formed by a combination of the following: Device number, speed option (if applicable), package type, operating range and screening option (if desired).

Am2946/2947

D

C

B

Screening Option  
Blank - Standard processing  
B - Burn-in

Temperature (See Operating Range)  
C - Commercial (0°C to +70°C)  
M - Military (-55°C to +125°C)

Package  
D - 20-pin CERDIP  
X - Dice

Device type  
Bidirectional Bus Transceivers

### Valid Combinations

Am2946  
Am2947

PC  
DC, DCB, DM,  
DMB  
XC

### Valid Combinations

Consult the AMD sales office in your area to determine if a device is currently available in the combination you wish.

## PIN DESCRIPTION

| Pin No. | Name                           | I/O | Description                                                                                                                                                                                                           |
|---------|--------------------------------|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|         | A <sub>0</sub> -A <sub>7</sub> | I/O | A port inputs/outputs are receiver output drivers when T/R is LOW and are transmit inputs when T/R is HIGH.                                                                                                           |
|         | B <sub>0</sub> -B <sub>7</sub> | I/O | B port inputs/outputs are transmit output drivers when T/R is HIGH and receiver inputs when T/R is LOW.                                                                                                               |
| 9       | CD                             | I   | Chip Disable forces all output drivers into 3-state when HIGH (same function as active LOW chip select, CS).                                                                                                          |
| 11      | T/R                            | I   | Transmit/Receive direction control determines whether A port or B port drivers are in 3-state. With T/R HIGH A port is the input and B port is the output. With T/R LOW A port is the output and B port is the input. |

## FUNCTION TABLE

| Inputs           | Conditions |     |      |
|------------------|------------|-----|------|
| Chip Disable     | L          | L   | H    |
| Transmit/Receive | L          | H   | X    |
| A Port           | Out        | In  | Hi-Z |
| B Port           | In         | Out | Hi-Z |

**ABSOLUTE MAXIMUM RATINGS**

Storage Temperature ..... -65°C to +150°C  
 Supply Voltage ..... 7.0V  
 Input Voltage ..... 5.5V  
 Output Voltage ..... 5.5V  
 Lead Temperature (Solder, 10 seconds) ..... 300°C

*Stresses above those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent device failure. Functionality at or above these limits is not implied. Exposure to absolute maximum ratings for extended periods may affect device reliability.*

**OPERATING RANGES**

Commercial (C) Devices

Temperature ..... 0°C to +70°C

Supply Voltage ..... +4.75V to +5.25V

Military (M) Devices

Temperature ..... -55°C to +125°C

Supply Voltage ..... +4.5V to +5.5V

*Operating ranges define those limits over which the functionality of the device is guaranteed.*

**DC CHARACTERISTICS** over operating range unless otherwise specified
