

Am2147/Am21L47

4096x1 Static RAM

DISTINCTIVE CHARACTERISTICS

- High speed — access times down to 35 ns maximum
- Automatic power-down when deselected
- Low power dissipation
- High output drive
- TTL compatible interface levels
- No power-on current surge

GENERAL DESCRIPTION

The Am2147/Am21L47 Series are high-performance, 4096 x 1-bit, static, read/write, random-access memories. It is organized as 4096 words by one bit per word. All interface signal levels are identical to TTL specifications, providing good noise immunity and simplified system design. All inputs are purely capacitive MOS loads. The outputs will drive up to seven standard TTL loads or up to six Schottky TTL loads.

Only a single +5-volt power supply is required. When deselected ($\overline{CS} \geq V_{IH}$), the Am2147 automatically enters a

power-down mode which reduces power dissipation by more than 85%. When selected, the chip powers up again with no access time penalty.

Data In and Data Out use separate pins on the standard 18-pin package. Data Out is the same polarity as Data In. Data Out is a three-state signal allowing wired-or operation of several chips. Data In and Data Out may be connected together for operation in a common data bus environment.

ORDERING INFORMATION

Standard Products

AMD standard products are available in several packages and operating ranges. The order number (Valid Combination) is formed by a combination of:

- a. **Device Number**
- b. **Speed Option** (if applicable)
- c. **Package Type**
- d. **Temperature Range**
- e. **Optional Processing**

Valid Combinations	
AM2147-35	PC, PCB, DC, DCB, LC, LCB
AM2147-45	
AM2147-55	
AM2147-70	
AM21L47-45	
AM21L47-55	
AM21L47-70	

Valid Combinations

Valid Combinations list configurations planned to be supported in volume for this device. Consult the local AMD sales office to confirm availability of specific valid combinations, to check on newly released valid combinations, and to obtain additional data on AMD's standard military grade products.

MILITARY ORDERING INFORMATION

APL Products

AMD products for Aerospace and Defense applications are available in several packages and operating ranges. APL (Approved Products List) products are fully compliant with MIL-STD-883C requirements. The order number (Valid Combination) is formed by a combination of:

- a. Device Number
- b. Speed Option (if applicable)
- c. Device Class
- d. Package Type
- e. Lead Finish

Valid Combinations	
AM2147-45	/BVA
AM2147-55	
AM2147-70	
AM2147-45	/BUC
AM2147-55	
AM2147-70	

Valid Combinations

Valid Combinations list configurations planned to be supported in volume for this device. Consult the local AMD sales office to confirm availability of specific valid combinations or to check for newly released valid combinations.

Group A Tests

Group A tests consist of Subgroups
1, 2, 3, 7, 8, 9, 10, 11.

PIN DESCRIPTION

A₀ - A₁₁ Address Inputs

The address input lines select the RAM location to be read or written.

CS Chip Select (Input, Active LOW)

The Chip Select selects the memory device.

WE Write Enable (Input, Active LOW)

When WE is LOW and CS is also LOW, data is written into the location specified on the address pins.

D_{IN} Data In (Input)

This pin is used for entering data during write operations.

D_{OUT} Data Out (Output, Three-State)

This pin is three state during write operations. It becomes active when CS is LOW and WE is HIGH.

V_{CC} Power Supply

V_{SS} Ground

ABSOLUTE MAXIMUM RATINGS

Storage Temperature	-65 to +150°C
Ambient Temperature with Power Applied	-55 to +125°C
Supply Voltage	-0.5 V to +7.0 V
Signal Voltages with respect to ground	-3.5 V to +7.0 V
Power Dissipation	1.2 W
DC Output Current	20. mA

Stresses above those listed under **ABSOLUTE MAXIMUM RATINGS** may cause permanent device failure. Functionality at or above these limits is not implied. Exposure to absolute maximum ratings for extended periods may affect device reliability.

Absolute Maximum Ratings are for system-design reference; parameters given are not 100% tested.

OPERATING RANGES

Commercial (C) Devices	
Ambient Temperature (T_A)	0 to +70°C
Supply Voltage (V_{CC})	+4.5 V to +5.5 V
Military (M) Devices	
Ambient Temperature (T_A)*	-55 to +125°C
Supply Voltage V_{CC}	+4.5 V to +5.5 V

Operating ranges define those limits between which the functionality of the device is guaranteed.

* T_A is defined as the "instant on" case temperature.

DC CHARACTERISTICS over operating ranges unless otherwise specified (for APL Products, Group A, Subgroups 1, 2, 3 are tested unless otherwise noted)

Parameter Symbol	Parameter Description	Test Conditions	Am2147-35 Am2147-45 Am2147-55		Am21L47-45 Am21L47-55 Am21L47-70		Am2147-70		Unit
			Min.	Max.	Min.	Max.	Min.	Max.	
I_{OH}	Output High Current	$V_{OH} = 2.4$ V $V_{CC} = 4.5$ V	-4		-4		-4		mA
I_{OL}	Output Low Current	$V_{OL} = 0.4$ V $T_A = 70^\circ\text{C}$ $T_A = 125^\circ\text{C}$	12		12		12		mA
V_{IH}	Input High Voltage		2.0	6.0	2.0	6.0	2.0	6.0	V
V_{IL}	Input Low Voltage		-2.5	0.8	-2.5	0.8	-2.5	0.8	V
I_{IX}	Input Load Current	$V_{SS} \leq V_I \leq V_{CC}$	-10	10	-10	10	-10	10	μA
I_{OZ}	Output Leakage Current	$GND \leq V_O \leq V_{CC}$ Output Disables $T_A = -55$ to $+125^\circ\text{C}$	-50	50	-50	50	-50	50	μA
C_i	Input Capacitance	Test Frequency = 1.0 MHz (Note 4)		5		5		5	pF
C_O	Output Capacitance	$T_A = 25^\circ\text{C}$, All pins at 0 V, $V_{CC} = 5$ V		6		6		6	pF
I_{CC}	V_{CC} Operating Supply Current	Max. V_{CC} $CS \leq V_{IL}$ Output Open $T_A = 0$ to 70°C $T_A = -55$ to 125°C		180		125		160	mA
I_{SB}	Automatic CS Power Down Current	Max. V_{CC} , ($CS \geq V_{IH}$) (Note 3) $T_A = 0$ to 70°C $T_A = -55$ to $+125^\circ\text{C}$		30		15		20	mA

- Notes: 1. Test conditions assume signal transition times of 10 ns or less, timing reference levels of 1.5 V, input pulse levels of 0 to 3.0 V and output loading of the specified I_{OL}/I_{OH} and 30 pF load capacitance. Output timing reference is 1.5 V.
2. The internal write time of the memory is defined by the overlap of CS LOW and WE LOW. Both signals must be low to initiate a write and either signal can terminate a write by going HIGH. The data input setup and hold timing should be referenced to the rising edge of the signal that terminates the write.
3. A pull-up resistor to V_{CC} on the CS input is required to keep the device deselected during V_{CC} power up. Otherwise I_{SB} will exceed values given.
4. These parameters are not 100% tested, but guaranteed by characterization.
5. Chip deselected greater than 55 ns prior to selection.
6. Chip deselected less than 55 ns prior to selection.
7. Transition is measured at 1.5 V on the input to $V_{OH} - 500$ mV and $V_{OL} + 500$ mV on the outputs using the load shown in Figure B under Switching Test Circuit.
8. WE is HIGH for read cycle.
9. Device is continuously selected, $CS = V_{IL}$.
10. Address valid prior to or coincident with CS transition LOW.

SWITCHING CHARACTERISTICS over operating ranges unless otherwise specified (Note 1) (for APL Products, Group A, Subgroups 9, 10, 11 are tested unless otherwise noted)
