Notes:

3. T_A = +25°C, f = 1 MHz
4. CPD is defined as the value of the internal equivalent capacitance which is derived from dynamic operating current consumption (I_{CCD}) at no output loading and operating at 50% duty cycle (see Figure 2). CPD is related to I_{CCD} dynamic operating current by the expression: I_{CCD} = (CPD)(V_{CC})(f_{IN}) + (I_{CC} static).
