

Am93S48

Twelve-Input Parity Checker/Generator

Distinctive Characteristics

- Generates or checks parity over 12 bits
- Advanced Schottky technology

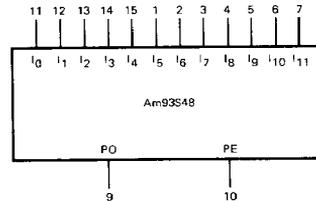

- Same delay to EVEN and ODD parity outputs
- 100% reliability assurance testing in compliance with MIL-STD-883.

FUNCTIONAL DESCRIPTION

The Am93S48 is a high-speed, 12-input parity checker or parity generator. The device is built using advanced Schottky technology and also incorporates PNP input transistors to reduce the input loading to only 0.4 STTL Unit Loads.

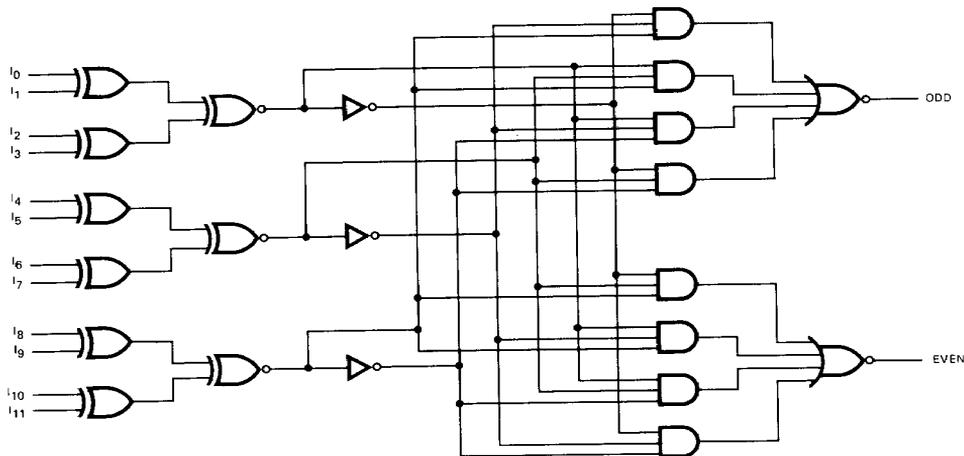

Both an ODD parity output and an EVEN parity output are obtained with the same propagation delay. This is accomplished by using an output structure that looks at the input as three 4-bit parity trees.

LOGIC SYMBOL

VCC = Pin 16
GND = Pin 8
