E-T-A® An Introduction to E-T-A Circuit Protection

E-T-A Protection and Safety

E-T-A were pioneers in the development of precision performance circuit breakers with characteristics specifically designed to protect equipment, sub-systems and components against the potentially catastrophic effects of electrical overload and short circuits.

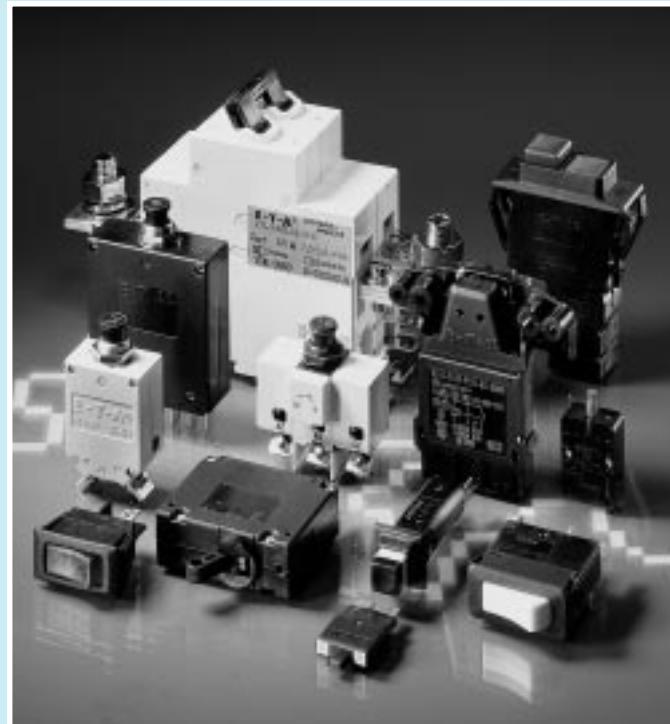

Today we offer one of the widest product ranges of its type on the market including high performance models for aerospace, defence, and other applications whose requirements for performance, safety and reliability are uncompromising.

We also manufacture battery isolation switches; door lock relays; solid state controllers with current limiting characteristics for use in electronic power management systems; and a comprehensive range of electronic control products and instrumentation.

Older methods of protecting electrical and electronic systems from overloads and short circuits are no longer sufficient. Problems of large current rating steps, wide performance bands and premature ageing can cause serious difficulties in safety critical systems and equipment; furthermore, multi-phase circuitry requires disconnection of all poles. If fuses are used, comprehensive stocks of replacements are required to cover every eventuality.

Professionals have long recognised the advantages of circuit breaker technology. Overcurrent protection ensures safe performance of all components, while circuit breakers offer convenience in operation and can confidently be reset by inexperienced personnel.

E-T-A circuit breakers are far and away the preferred choice.

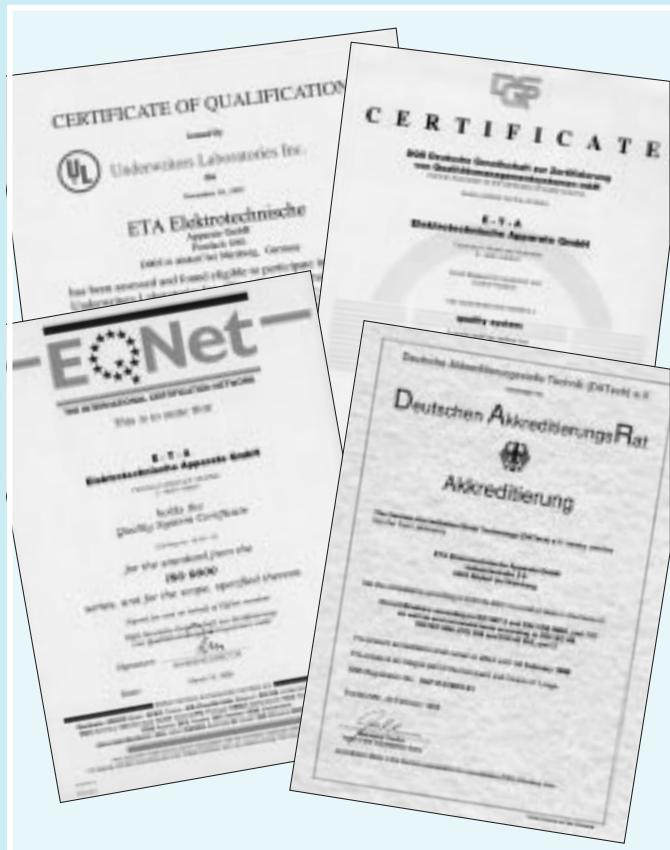

E-T-A Total Quality

Circuit breakers are safety-critical items. The same E-T-A products may be required to operate just occasionally or very often during the life of the equipment they are protecting. Either way, operation must be totally dependable immediately a fault occurs. Any failure to perform could have disastrous consequences - endangering people and property.

We have been designing and manufacturing circuit protection products since 1948 and have responded to the performance requirements across a wide range of industries. Most importantly, we have gained expertise on the long term needs of circuit protection; the impact of ageing equipment, corrosion, deterioration of wiring insulation and loosening of connectors. All these place additional demands on circuit protection devices.

Meeting these needs, E-T-A products are designed and manufactured for world class quality, to the most stringent standards. Quality is built-in at every stage of the manufacturing process and is verified by the latest automatic test equipment and SPC techniques.

Our quality management system is accredited to ISO 9001/EN29001 and has been independently audited by many of the world's leading manufacturers.

E-T-A Support

Our test laboratories are equipped to conduct comprehensive electrical and environmental qualification programmes and are approved for low voltage switchgear to EN 45000 requirements.

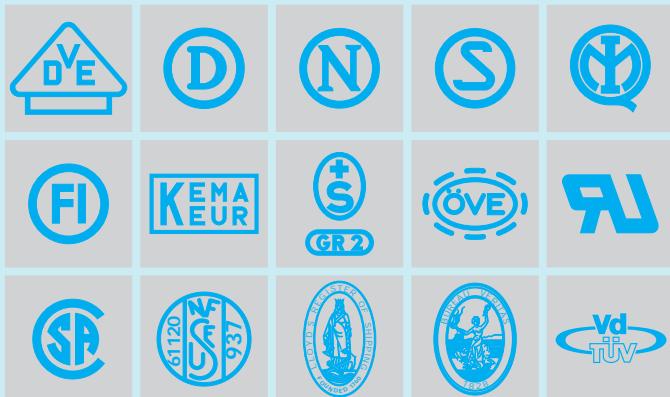

Our substantial investment in research and development ensures that we remain at the forefront of technology. Our international standards committee work, covering many different industries, enables us to give up-to-the-minute advice on legislative demands and safety trends worldwide.

E-T-A® An Introduction to E-T-A Circuit Protection

E-T-A Approvals

E-T-A circuit protection products are designed according to IEC requirements for CBEs (IEC 934, EN 60934) - defined as circuit breakers for equipment where unrestricted short circuits either cannot occur or are limited by back-up protection elsewhere in the system.

Most E-T-A models are fully approved by leading authorities including VDE, CSA and UL (supplementary protectors in accordance with UL 1077). Furthermore approvals are also held from specialised agencies such as the UK Civil Aviation Authority, Lloyds Register of Shipping, Bureau Veritas and the American Bureau of Shipping.

CE Mark

Those products from the E-T-A programme which are subject to the European Union EMC Directive have been CE marked since early 1996 to demonstrate compliance. Declarations of conformity contain the necessary supporting evidence.

In addition, from January 1997, models covered by the Low Voltage Directive have also been CE marked.

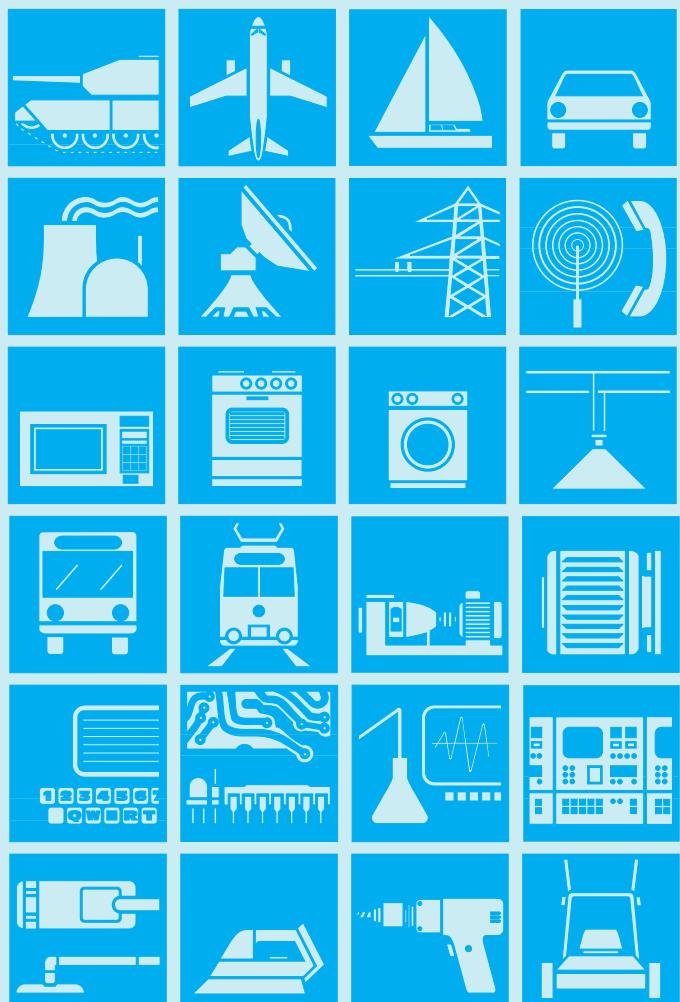

CE marking is the responsibility of individual manufacturers and should not be confused with formal approval logos, the use of which is administered by recognised test authorities.

E-T-A Reliable Protection for Demanding Applications

E-T-A circuit breakers are designed for equipment, component and low voltage wiring protection. Their precision performance characteristics are ideally suited to applications for which other methods of protection are generally inadequate. These include:

motors
transformers
solenoids
printed circuit boards
power supplies
test equipment
control instrumentation
computers
communications systems
factory automation
aircraft
automotive systems
military vehicles
boats
semi-conductors
domestic/household appliances
commercial equipment
business machines
medical equipment
... and many others

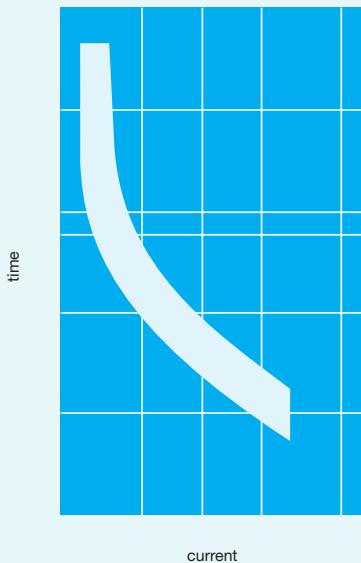

Current Ratings and Time/Current Characteristic Curves

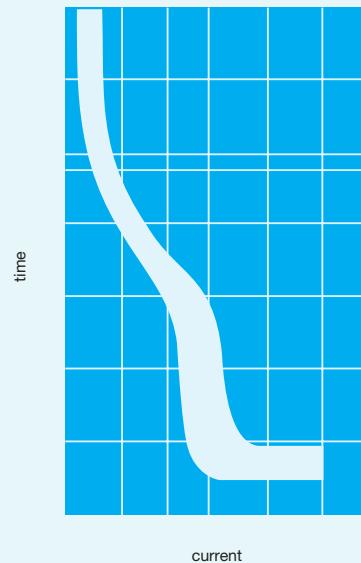

Key selection criteria are the trip time zones determined at 23 °C which are shown graphically for each E-T-A product on the relevant data sheet. Upper and lower curves show minimum and maximum adjustment tolerances. Unless otherwise stated, all thermal and thermal-magnetic

circuit breakers will carry 100 % rated current continuously and trip within one hour at 140 % rating. Adjustment to closer tolerances is available to special order.

thermal

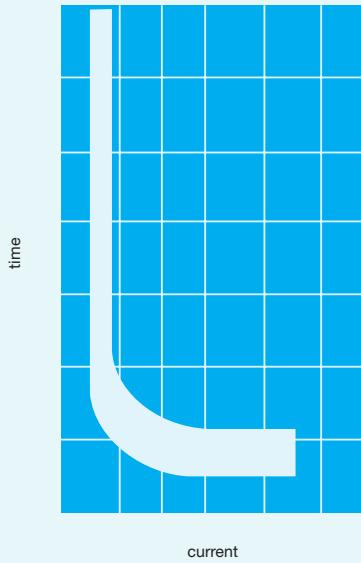

thermal/magnetic

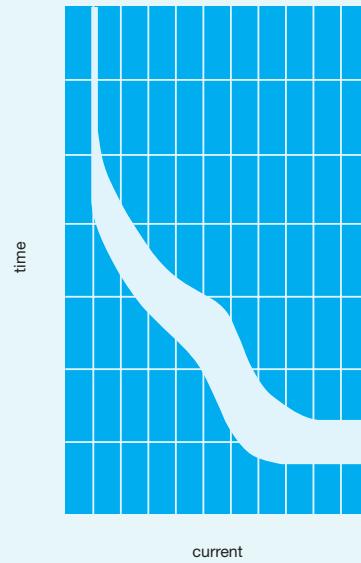

magnetic (no delay)

(delayed magnetic curves available)

magnetic-hydraulic

E-T-A Catalogue

The E-T-A catalogue describes the largest product range of its type, providing solutions to almost any requirement. It is divided into the following sections:

0 Introduction

Thermal circuit breakers

Thermal-magnetic circuit breakers

Hydraulic-magnetic and magnetic circuit breakers

High performance circuit breakers and battery switches

Door lock, time delay and motor protection controls

Solid State Remote Power Controllers (SSRPCs)

Electronic products

Approvals

Each product section includes a quick selector chart and short form presentation of the range, followed by detailed specifications for individual product types or groups.

Please contact us if you have any difficulty in matching a product to your requirements or have a special application - we have the flexibility to develop custom solutions tailored to specific needs: products that are both solution-oriented and cost effective.

A separate catalogue fully describes E-T-A electronic sensors, control products and instrumentation.

E-T-A Choice – Circuit Breakers to Ensure the Best Protection

A number of factors arise in choosing a circuit breaker to protect against overloads and short circuits. E-T-A specialists can advise on your requirement, according to the specific field application.

Four types of tripping operation cover most situations.

1. Thermal Circuit Breakers (TO)

The tripping mechanism comprises a thermal actuator and mechanical latch, designed to discriminate between in-rush/temporary current surges and prolonged overloads to ensure effective overcurrent protection. Applications include motors, transformers, solenoids and low voltage wiring.

2. Thermal-Magnetic Circuit Breakers (TM)

Combining a solenoid in series with a bimetal thermal actuator, these provide time current characteristics with two distinct steps. A high overcurrent value causes the solenoid to trigger the release mechanism rapidly, the thermal mechanism responds to prolonged low value overloads. These circuit breakers are well suited to telecommunications, process control, and similar applications requiring precision performance.

3. Magnetic Circuit breakers (MO or HM)

A well-proven design of solenoid coil with optional hydraulic delay provides tripping that is highly tolerant of changes in ambient temperature. A wide range of performance characteristics is available in single, double and three pole configurations.

Series 808 and 809 are fast acting magnetic devices sensitive to small overload currents. Typical applications include printed circuit board and power semi-conductor protection.

4. High Performance Circuit Breakers

Where ultimate operation under adverse conditions is required, E-T-A high performance circuit breakers provide high interrupting capacity and excellent environmental specifications. Available in thermal and thermal-magnetic versions, they offer current ratings up to 500 A. Special models are designed for aerospace, defence and similar heavy-duty applications.

Interrupting Capacity I_{cn}

Overload and maximum interrupting capacities are specified for each series, defined as the maximum current levels that can be switched safely for a minimum of 40 operations, and a minimum of 3 operations respectively. For thermal circuit breakers back-up protection is advised if higher currents are possible. Please contact us for further advice on specific applications.

IEC 934/EN 60934 defines interrupting capacity as the rated conditional short circuit current performance. According to category PC1, this is the value of rated conditional short circuit current (interrupting capacity) for which the prescribed conditions do not include fitness of the CBE for its further use. PC2 is defined as the value of rated conditional short circuit current for which the prescribed conditions do include fitness of the CBE for its further use.

Switching Sequence

The switching sequence for short circuit tests is normally abbreviated as follows, according to relevant international CBE standards.

o: Break operation (open)

The circuit breaker in the closed position is caused to open through a short circuit current applied by means of a separate switch. Referenced as co (closed open) in earlier specifications.

co: Make operation with subsequent break operation (close open)

The circuit breaker in the open condition is closed onto a sustained short circuit and must immediately re-open. This operating mode requires the circuit breaker to be fail-safe as the actuator cannot be released as quickly as the circuit breaker mechanism will open. Referenced as oco (open close open) in earlier specifications.

t: Time period between switching operations

Normally 3 minutes, or the period required before the circuit breaker can be re-set.

Solderability of Silver-Plated Terminals

E-T-A products with silver-plated terminals will not be adversely affected (e.g. by sulphur induced corrosion) by the packaging material. However, the solderability of silver-plated terminals can deteriorate with time. Provided these products are stored, solderability will be guaranteed for a period of six months from the date of delivery. If they are not required immediately, it is recommended that these products are packed and stored in polythene bags. No drying agents should be used as they may contain silicate gel which can impair solderability. Flux should be non-halogenous.

E-T-A Advantages

Snap-Action Mechanism

The snap-action mechanism featured in many E-T-A models ensures that the contact closing speed is independent of the speed of operation of the actuator (push button, rocker, toggle etc.). The moving contact is retained until the actuator causes a defined force to act in the closing direction of the contacts. Once this force is exceeded, the mechanical retention is overcome allowing the contacts to snap closed (tease free mechanism.) The closing speed is a function of this force alone. Snap-action mechanisms eliminate contact welding upon switching on to sustained short-circuits and minimise the risk of contact wear over the circuit breakers' life.

Trip Free Mechanism

E-T-A circuit breakers cannot be held closed against an overload. This is achieved through the use of positively trip free designs in accordance with IEC 934/EN 60934 (with the exception of models 1610, 1658, 808 and 809 which are designed for specialised applications).

Manual Trip / On-Off Switches

Many models are available with a manual trip feature, either standard or as an option.

Others are specifically designed as combined switch/circuit breakers with rocker, push button, or toggle actuation, styled for front panel mounting. Rocker types are available with illumination as an option. According to IEC 934/EN 60934:

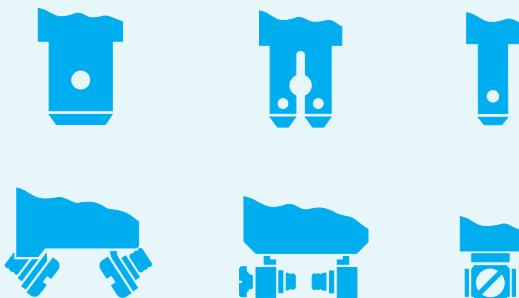

R = manual reset only

M = with manual release but not intended for frequent use as a switch

S = combined switch/CBE function

Terminals

Most models are offered with either quick connect (also suitable for soldering) or screw terminals. Models with printed circuit board pins are also available.

Auxiliary Contacts

Electrically separate low current contacts can be included for use with alarm and control switching circuits.

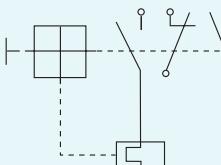

N/C (Si1) = Normally closed contacts are open when the main contacts are closed (break or b-contact).

N/O (Si 2) = Normally open contacts are closed when the main contacts are closed (make or a-contact).

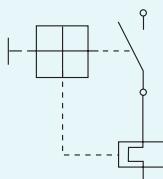

Shunt Terminal

Also available on some models: an additional, unprotected circuit tap, switched through the main contacts.

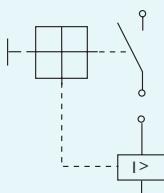

Auxiliary Contacts

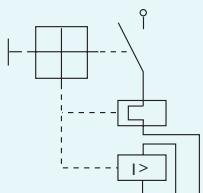

Shunt Terminal

Relay Trip

Dual Control

Relay Trip

An overload sensing circuit electrically separate from the switching contacts is a further possibility on some models.

Dual Control

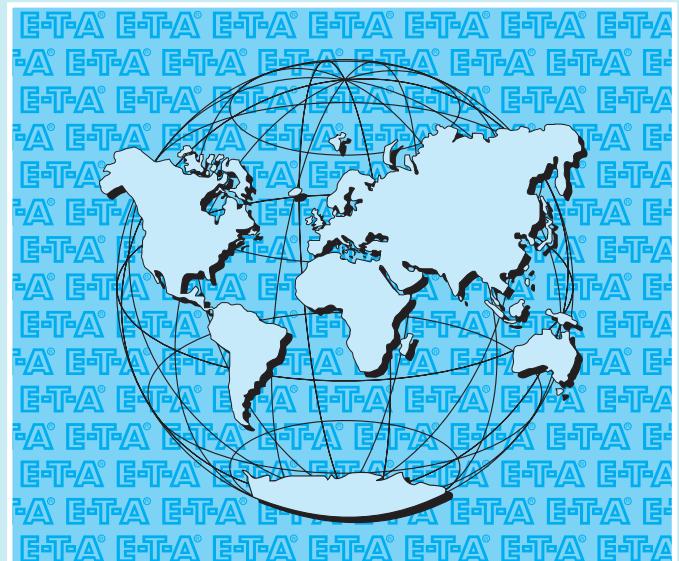

Thermal-magnetic circuit breakers inherently have two separate protection elements: the thermal circuit for overload sensing and the magnetic coil for abnormal conditions such as short circuits. The main contacts are in series. Electrical separation of the thermal and the magnetic elements enables independent monitoring of two separate signals – Dual Control – by just one single pole circuit breaker.

E-T-A Circuit Breakers with Advanced Features

- Nuisance-free operation when subject to high in-rush currents or transients, allowing ratings to be closely matched to the needs of the system and enabling the most efficient sizing of wiring and components.
- Wide selection of time/current operating characteristics ensure tailoring to many different applications.
- Quality design ensures resistance to premature failure through corrosion, fatigue, shock or vibration.
- Unlike fuses, no need for spares. Risks of using temporary inappropriate substitutes are eliminated, and warranty costs are reduced.
- Convenient resetting reduces down-time and service repair costs.
- Many types also function as on/off switches, simplifying installation - fewer components result in higher overall reliability.
- Internationally approved, avoiding the need for different models for different national standards.
- Positive physical interruption of the circuit is ensured. There is no risk of equipment remaining live. Low leakage currents are eliminated.
- Fail-safe if operated beyond specified performance limits. Unlike PTC devices, such as resettable fuses, which may arc and flame; also they require power to be removed before they can be reset.

E-T-A International

E-T-A is an international company, successful in world markets and with offices and support personnel strategically placed around the globe. Our product specialists will be happy to assist with the selection of suitable products based upon a thorough evaluation of your engineering and commercial objectives.

Ambient Temperature Influence

To ensure optimum matching of circuit breaker performance to the system requirements, E-T-A thermal and thermal-magnetic circuit breakers are not normally compensated for fluctuations in ambient temperature. The circuit breaker is usually subjected to the same heat source as the system so will automatically track its protective requirements.

However, some applications require the circuit breaker to operate continuously in either high or low temperatures. The following table shows the correction factors that typically should be applied. The performance of magnetic circuit breakers and type 1410 is not affected significantly within this temperature range.

Ambient temperature °C	Multiplication factor
-20	0.76
-10	0.84
0	0.92
+23	1.00
+40	1.08
+50	1.16
+60	1.24

Specification Notes

Close Mounting of CBEs

When several devices are mounted together, an air gap between each is recommended. If this is not possible, each device should carry only 80 % of its rating.

Horizontal installation is preferable.

Plug-in Mounted E-T-A Devices

The continuous rating capability of E-T-A sockets for plug-in circuit breakers is a function of the total number of circuit breakers fitted and the individual ratings of each. Please enquire with details of your application.

Degrees of Environmental Protection for Electrical Equipment

Terms such as drip-proof, water splash protection, waterproof and dustproof are all in common usage but may be misleading unless standard definitions are applied. The IEC has developed a standard coding system defined in IEC 529.

Protection categories are identified by the prefix letters „IP“ followed by 2 digits, the first of which refers to the level of protection provided against access by solid foreign objects and to hazardous parts; the second digit shows the level of protection against water ingress.

Degrees of protection of electrical equipment according to IEC 529

Example:

IP 4 4

Code letters _____

First characteristic digit _____

Second characteristic digit _____

First characteristic digit: Degree of protection against access to hazardous parts and against solid foreign objects

Designation	Description
0 Non-protected	No specific protection of persons against accidental access to live or moving parts. No protection of the equipment against solid foreign objects.
1 Protected against solid foreign objects of ≥ 50 mm	Protection against accidental access to live or internal moving parts, e.g. with the back of a hand, but no protection against intended access to these parts. Protection against the ingress of solid foreign objects of 50 mm dia. and greater.
2 Protected against medium-sized foreign objects ≥ 12 mm	Protection against finger access to live or internal moving parts. Protection against the ingress of solid foreign objects of 12 mm dia. and greater.
3 Protected against small solid foreign objects ≥ 2.5 mm	Protection against access to live or internal moving parts with a tool, or wires etc. of a thickness of > 2.5 mm. Protection against the ingress of solid foreign objects of 2.5 mm dia. and greater.
4 Protected against granular foreign objects ≥ 1 mm	Protection against access of live or internal moving parts with a tool, or wires etc. of a thickness of > 1 mm. Protection against the ingress of solid foreign objects of 1 mm dia. and greater.
5 Dust-protected	Protection against access to live or internal moving parts. Protection against harmful dust deposits. Ingress of dust is not totally prevented, but dust shall not penetrate in a quantity to interfere with satisfactory operation of the equipment.
6 Dust-proof	Full protection against access to live or internal moving parts. No ingress of dust.

Second characteristic digit: Degrees of protection against ingress of water

Designation	Description
0 non-protected	No specific protection
1 Protected against water drops falling vertically	Drops falling vertically shall have no harmful effects.
2 Protected against water drops falling vertically when enclosure is tilted up to 15°	Drops falling vertically shall have no harmful effects when the enclosure is tilted at any angle up to 15° on either side of the vertical.
3 Protected against water spray	Water sprayed at an angle up to 60° on either side of the vertical shall have no harmful effects.
4 Protected against splashing water	Water splashed against the enclosure from any direction shall have no harmful effects.
5 Protected against water jets	Water projected in jets against the enclosure from any direction shall have no harmful effects.
6 Protected against high-pressure water jets	Water protected in powerful jets against the enclosure from any direction shall have no harmful effects. *)
7 Protected against the effects of temporary immersion in water	Ingress of water in quantities causing harmful effects shall not be possible when the enclosure is temporarily immersed in water under specified conditions of pressure and time. *)
8 Protected against the effects of continuous immersion in water	Ingress of water in quantities causing harmful effects shall not be possible when the enclosure is continuously immersed in water under specified conditions of pressure and time. *)

*) Certain equipment does not allow any ingress of water. If applicable, this is included in the relevant equipment specification.

Preferred degrees of protection

Protection against access to hazardous parts and against solid foreign objects		Protection against ingress of water						
		Second characteristic digit						
		0	1	2	3	4	5	6
IP 0		IP 00						
IP 2		IP 20	IP 21	IP 22	IP 23			
IP 3		IP 30	IP 31	IP 32	IP 33			
IP 5					IP 54			
IP6						IP 65	IP 66	

Protection degree IP 54 may apply to products with a splashcover, for example for front of panel protection whereas the terminals (IP 00) will be in an enclosed area.

Cable ratings to EN 60934

EN 60934:1994 + A1 : issue 1994

Standard current ratings as assigned to different cable cross sectional areas (stranded copper cable).

Size mm ²	1	1.5	2.5	4	6	10	16	25	35	50
Current rating (A)	to 6	>6	>13	>20	>25	>32	>50	>63	>80	>100

Cable ratings and sizes for aerospace applications

Current rating (A)	AWG cable sizes		Airbus	Boeing BPS-C-144	AWG	mm ²
	EN 2350	MS 3320				
0.5	20	22	24			
1	20	22	24	20		
2	18	22	24	18		
2.5	18	22	24	18		
3	18	22	24	18		
4	18	22	24	18		
5	18	22	24	18		
7.5	16	22	22	16		
10	16	20	20	16		
15	14	18	16	14		
20	12	16	14	12		
25	10		12	10		

Representation of operating status

In accordance with DIN 40719, part 3, issue April 1997, the operating status of switching elements should be represented as follows:

● Telecommunications

The representation of the **ready** status as used by the telecommunications industry - Fuses and circuit breakers are shown in the **closed** position.

● Power engineering

The representation of the **open** position is used by the power, installation, control and data processing industries.

Equipment is represented in the **de-energized** condition and without the effect of an operating force.

Power switches, disconnectors, circuit breakers etc. are shown in the **open** condition, which is the **normal position**.

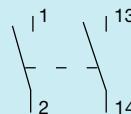

Following these definitions, **E-T-A products are generally shown in the de-energized condition.**

Definition of make contact and break contact

The definition of IEC Publication 50 (441), 1974 issue, applies.

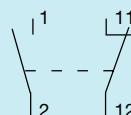

make contact
a-contact
N/O (Si2) contact

A control or auxiliary contact which is closed when the main contacts of the mechanical switching device are closed and open when they are open.
Example:

break contact
b-contact
N/C (Si1) contact

A control or auxiliary contact which is open when the main contacts of the mechanical switching device are closed and closed when they are open.
Example:

Note:

The common terminal of change over contacts is often shown as C (common).

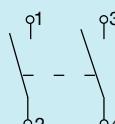

Terminal identification

The following identifications are in conformance with DIN EN 5005 July 1977. However, the diagrams for the examples have been adjusted to DIN 40900 1988 (equivalent to IEC 617 of 1983).

Main circuit

One-digit numerals - one pair of subsequent numerals per main switching element

Example

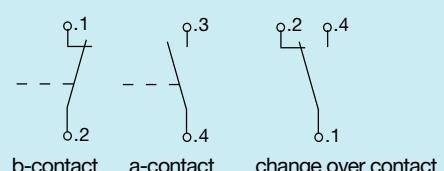

2 main switching elements

Auxiliary circuits

Two-digit numbers - Second digit function numeral
b-contact 1 and 2
a-contact 3 and 4
change over contact 1, 2 and 4
b-contact 7 and 8, delayed
change over contact with special functions 5, 6 and 8
- First digit, ordinal number switching elements with identical function and belonging together

Examples:

Graphical symbols in accordance with DIN 40900/IEC 617

Description	DIN 40900/IEC 617	AIINSI/CSA
Operated by electromagnetic actuator	02-13-23	
Operated by electromagnetic overcurrent protection	02-13-24

Contactor (contact open in the unoperated position)	07-13-02	
Contactor or relay with three make contacts		
3 pole contactor with three electrothermal overcurrent releases		
3 pole disconnector		
Single pole disconnector with detent, manually operated, 1 break contact and 1 make contact		
Single pole disconnector with 2 parallel contacts, manually operated, with detent and remote trip coil (FA) - type 921		
3 pole circuit breaker		
3 pole circuit breaker with latching mechanism, electrothermal and electro-magnetic overcurrent releases		

**Single and multi pole
thermal circuit breakers (CBEs)
with and without auxiliary contacts**

**Max. voltage ratings 3 AC 415 V,
AC 250 V, DC 50 V**
Current ratings 0.05 ... 30 A

With simple operation through the heating effect of current, thermal circuit breakers offer one of the most reliable and cost effective forms of protection device available. As a result they are ideally suited to the protection of a broad range of components and systems - from motors and transformer windings, through printed circuit boards, to the low voltage power distribution circuits of road vehicles, boats, and battery powered machines.

Such applications all require the ability to discriminate between safe switch-on surges or transients on the one hand, and harmful sustained overloads on the other. Thermal circuit breakers can withstand high level surges, which arise from lamp loads or motor starting, for example. At the same time they afford protection against the effects of genuine failure such as motor locked rotors. The characteristics of thermal CBE's can be matched closely to the ratings of the component or system they are protecting, eliminating the need for over-sizing of wiring and connectors, whilst offering dependable protection - even under low level overcurrent conditions which cannot be adequately provided for by other methods of circuit protection.

E-T-A thermal circuit breakers utilise one of three different mechanisms optimised for their range of operation

- a snap action disc type bimetal and contact assembly
- a bimetal with a mechanical latch and separate spring loaded contact
- a hot wire design with extremely fast switching time

All are individually calibrated in the factory to ensure safe, predictable performance under a wide range of conditions.

The E-T-A thermal circuit breakers in this catalogue section are manually resettable enabling the power supply to be restored after operation. Several models combine the functions of circuit breaker protection and on/off switching in a single component. There is a choice of rocker, toggle or push button actuation according to user preference.

E-T-A's wide range of models enables the designer to make optimal selections according to specific performance, installation and styling needs.

All dimensions without tolerances are for reference only. In the interest of improved design, performance and cost effectiveness the right to make changes in these specifications without notice is reserved. Product markings may not be exactly as the ordering codes.

Description

Miniaturised single pole thermal circuit breaker with push-to-reset, tease free, trip-free, snap action mechanism (R-type TO CBE to EN 60934). Available in versions for PCB or panel mounting, snap-in or threadneck, or as an integral type. Approved to CBE standard EN 60934 (IEC 934). For higher current ratings see type 1140.

Typical applications

Motors, transformers, solenoids, printed circuit boards, hand-held machines and appliances.

Accessories

X 201 285 01 Water splashcover/knurled nut assembly for type 106.

Ordering information

The exact part number required can be built up from the table of choices shown above. Ordering references for optional features should be omitted if not required.

* mounting hardware bulk shipped

Description

Single pole toggle switch/thermal circuit breakers (S-type TO CBE to EN 60934) for threadneck panel mounting. Available with optional neon illumination (filament bulb for low voltages) to indicate the ON position. Fitted with toggle or baton style actuator in a range of colours - translucent for illuminated version. Under overload the actuator returns to the OFF position.

Typical applications

Motors, transformers, solenoids, extra-low voltage wiring systems, power supplies.

E-T-A® Thermal Overcurrent Circuit Breakers 120-P50/124-

Description

Single pole switch/thermal circuit breaker (S-type TO CBE to EN 60934) for snap-in panel mounting. Available in rocker (120-P50) or push/push (124-P50) switch versions. Under overload the actuator returns to the OFF position.

Typical applications

Extra low voltage automotive and marine wiring systems.

E-T-A® Thermal Overcurrent Circuit Breaker 127-...

Description

Single pole thermal circuit breaker with push-to-reset, tease-free, trip-free, snap action mechanism (R-type TO CBE to EN 60934: M-type when fitted with optional manual release feature). Available in versions for plug-in or integral mounting, track mounting, or with a frame for snap-in panel mounting. The optional -KF housing is particularly suited to high humidity and other damp conditions. Approved to CBE standard EN 60934 (IEC 934).

Typical applications

Motors, transformers, solenoids, battery chargers, extra low voltage systems.

Accessories

10F-P10	Modular snap-together surface mounted sockets, each accommodating two plug-in circuit breakers. With push-on terminals.
10F-K10	As above but with screw terminals.
10F-A10	As above but with a combination of screw and push-on terminals.
Y 301 166 02	Two-way brass connecting/bus bar links for type 10F-K10/-A10 sockets.
Y 301 166 01	Four-way brass connecting/bus bar links.
X 210 589 01	Fifty-five 1.5mm ² cable links with pre-fitted connection lugs for type 10F-K10/-A10 sockets.
X 210 589 02	As above but with 2.5mm ² cable links.
X 210 588 01	100-way 1.5mm ² cable links with pre-fitted push-on connectors for type 10F-P10 sockets, brown
X 210 588 02	As above, but with 2.5mm ² cable links, black.
X 210 588 03	As above, but with 2.5mm ² cable links, red.
X 210 588 04	As above, but with 2.5mm ² cable links, blue.

E-T-A® Thermal Automotive Circuit Breaker 129-L11-H-KF

Description

Single pole thermal circuit breaker with push-to-reset, tease-free, trip-free, snap action mechanism and separate manual release (M-type TO CBE to EN 60934). Designed for bolt-on mounting with terminal block type 83-P10. The special housing (-KF) supplied as standard, is particularly suited to high humidity and other damp conditions.

Typical applications

Extra low voltage wiring systems on all types of vehicles and marine craft.

Accessories

83-P10 Surface mounted terminal blocks, each accommodating six bolt-on circuit breakers. Fitted with terminals for push-on connectors.

E-T-A® Thermal Overcurrent Circuit Breaker 1110...

Description

Single pole switch/thermal circuit breaker (M-type TO CBE to EN 60934) with tease-free, trip-free, snap action mechanism. Designed for snap-in panel mounting utilising keyed round hole or industry standard fuse-holder cut-out dimensions. Featuring an ergonomically styled two colour actuator with indicator band clearly showing the tripped/OFF position. Available with square or circular bezels.

Approved to CBE standard EN 60934 (IEC 934).

Typical applications

Motors, transformers, solenoids, extra low voltage systems, household and office machines, instrumentation, marine applications.

1110-F1..

Accessories

Y 304 745 01 Water splash cover for use with square bezels
Y 305 602 01 Terminal shroud, for insulation or dust protection

E-T-A® Thermal Overcurrent Circuit Breaker 1140-...

Description

Miniaturised single pole thermal circuit breaker with push-to-reset tease-free, trip-free, snap action mechanism (R-type TO CBE to EN 60934). Available in versions for panel mounting, snap-in or threadneck, or as an integral type. For lower current ratings see types 104, 105, 106. Approved to CBE standard EN 60934 (IEC 934).

Typical applications

Motors, transformers, solenoids, hand-held machines and appliances.

Accessories

X 201 285 01 Water splash cover/knurled nut assembly for type 1140-G.

E-T-A® Thermal Overcurrent Circuit Breaker 1140... (2 pole)

Description

Miniaturised double pole thermal circuit breaker with push-to-reset tease-free, trip-free, snap action mechanism (R-type TO CBE to EN 60934). Threadneck panel mounting. Suitable for line and neutral switching - the thermal actuator operating on one pole simultaneously opens both poles under overload conditions. Approved to CBE standard EN 60934 (IEC 934).

Typical applications

Motors, transformers, solenoids, hand-held machines and appliances. Especially suited to AC duties where the correct orientation of line/neutral is not known/cannot be guaranteed.

Accessories

Water splash cover/knurled nut assembly, transparent
X 201 285 01 (IP 64)

Description

Thermal circuit breaker, with controlled self-resetting mechanism, specially suited to installation in inaccessible locations. Under overload conditions the circuit breaker contacts will open to protect the load circuit. A low current excitation circuit ensures that the contacts remain open thereby avoiding the hazards of automatic reset operation. The circuit breaker is reset by switching off the supply circuit for a short period.

Typical applications

Automotive and marine extra low voltage wiring systems and components.

Description

Miniaturised single pole rocker switch/thermal circuit breaker combining ON/OFF switching and extremely fast overload performance in a single component (S-type TO CBE to EN 60934/IEC 934). Under overload conditions an internal neon (filament bulb for low voltages) illuminates to give a clear signal of the tripped status of the mechanism and thereby the cause of power interruption, suffix -B. Alternatively the illumination can be conventionally wired to indicate the ON status of the device, suffix -E. Returning the rocker switch through the OFF position and back ON will reset the mechanism and restore the supply. Largely temperature-insensitive. Approved to CBE standard EN 60934 (IEC 934).

Typical applications

Motors, transformers, solenoids, PCBs, hand-held machines, appliances, instrumentation.

Description

Single pole press-to-reset thermal circuit breaker with extremely fast overload switching performance (R-type TO CBE to EN 60934). Single hole threadneck, PCB or integral mounting with a choice of designs. Miniaturised construction minimises PCB real estate required. Type 1410-L2 and 1410-G1 versions feature changeover contacts suitable for providing status output signals. Largely temperature-insensitive.

Typical applications

Motors, transformers, solenoids, PCBs, hand-held machines, appliances, instrumentation.

Description

Miniaturised single pole press-to-reset thermal circuit breaker designed for automotive fuse block installation. Extends the benefits of circuit breaker performance and convenience to applications which are cost critical.

Typical applications

Extra low voltage wiring systems on all types of vehicles and marine craft.

Accessories

12-J20	single mounting socket with screw terminals for DIN rail mounting

E-T-A® Thermal Overcurrent Circuit Breaker 1658-...

Description

Very cost effective design to meet international requirements. No exposed metal parts which are, or could become, current-carrying except for terminals.

- Manual reset, trip free mechanism
- Extremely small and lightweight
- UL, CSA, VDE approved

Typical applications

Battery chargers, consumer products, power supplies, motors.

Description

An extremely versatile range of rocker switch/thermal circuit breakers (S-type TO CBE to EN 60934) offering the choice of single pole, double pole with single pole protection, and double pole with protection on both poles. Designed for snap-in panel mounting with versions available for three different panel cut-out sizes. Neon illumination is optional (filament bulb for low voltages) and there is a range of colours and markings for the rocker. Under overload conditions the rocker returns to the OFF position.

Any one of the following additional function modules can be supplied factory fitted to the rear of the switch/circuit breaker.

- Under voltage release coil (for double pole versions only).
- Magnetic trip coil for short circuit protection.
- Magnetic trip coil for remote relay trip.
- Auxiliary contacts for status signalling.
- Mechanical slide interlock.

Approved to CBE standard EN 60934 (IEC 934).

Typical applications

Motors, transformers, solenoids, extra low voltage wiring systems, office machines, electro-medical equipment, power supplies, communications systems.

Accessories

Y 303 068 01	Insulated cover, snap-fitted to the exposed areas of the two incoming terminals (when terminal screws are not specified) to provide brush contact protection.
Y 303 862 01	Terminal adapter to convert screw terminals to push on connections when factory fitted under voltage release module is specified (two adapters required per unit).
Y 303 675 01	Retaining clip for -F3 mounting frame for panel thickness under 2 mm.
Y 303 675 02	As above for panel thickness under 4 mm.
Y 303 676 01	As above, for -F5 mounting frame.
Y 303 885 31	Blanking piece in -F3 size mounting frame.
Y 304 275 01	Rear terminal shroud.
X 221 619 01	Separate water splash cover for use with -F4 and -F5 size mounting frames.

Description

Switch/thermal circuit breaker (S-type TO CBE to EN 60934) with standard isolator style two button operation. Single button press-to-reset version also available. Both types can be supplied in single pole configuration only, in double pole with single pole protection, and in double pole with protection on both poles. Designed for snap-in panel mounting. There is a choice of push button colour combinations and neon illumination (filament bulb for low voltages) is optional.

Any one of the following additional function modules can be supplied factory fitted to the rear of the switch/circuit breaker.

- Under voltage release coil (for double pole versions only).
- Magnetic trip coil for short circuit protection - see page 113.
- Magnetic trip coil for remote relay trip.
- Auxiliary contacts for status signalling.
- Mechanical slide interlock.

Approved to CBE standard EN 60934 (IEC 934).

3120-F...

Typical applications

Motors, transformers, solenoids, extra low voltage wiring systems, office machines, electro-medical equipment, power supplies, communications systems, industrial controls.

Accessories

Y 303 068 01	Insulated cover, snap-fitted to the exposed areas of the two incoming terminals (when terminal screws are not specified) to provide brush contact protection.
Y 303 862 01	Terminal adapter to convert screw terminals to push on connections when factory fitted under voltage release module is specified (two adapters required per unit).
Y 303 675 01	Retaining clip for -F3 mounting frame for panel thickness under 2 mm.
Y 303 675 02	As above for panel thickness under 4 mm.
Y 303 885 31	Blanking piece in -F3 size mounting frame.
Y 304 275 01	Rear terminal shroud.
Y 306 001 01	Water splash cover for use with -F2 size mounting frame.
Y 306 551 01	Retaining clip for -F2 mounting frame.

Description

A module supplied factory fitted to type 3120 to provide electrically separate changeover contacts which operate as the main contacts open/close. Ideally suited to status signalling and sequence switching.

Typical applications

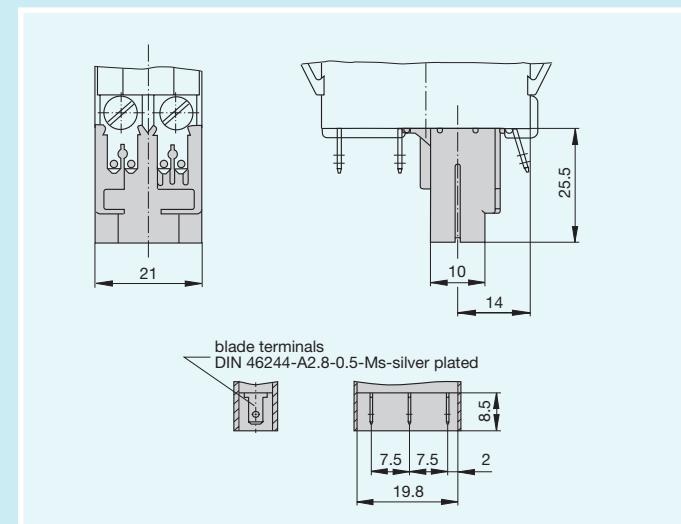

Monitoring of the switching position of the circuit breaker or any connected load.

VDE (EN 60934)	AC 250 V, DC 28 V	4 A
UL, CSA	AC 250 V	4 A

Description

A module suitable for all double pole versions of type 3120 to trip the main switch/circuit breaker mechanism in the event of loss of voltage. When the voltage is restored the rocker switch must be reset to reconnect the load, thereby avoiding the safety hazards associated with automatic re-starting of machinery.

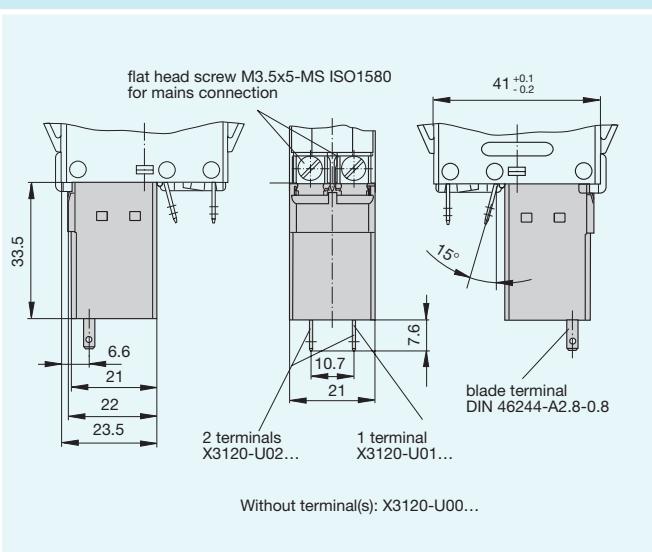

Note: Basic unit 3120-...-H7 or -G7 screw terminals necessary.

1

Typical applications

Machines such as power tools, industrial equipment and domestic appliances where automatic restart after restoration of power could be dangerous (EU Machinery Directive)

Mass	approx. 53 g (complete assembly)

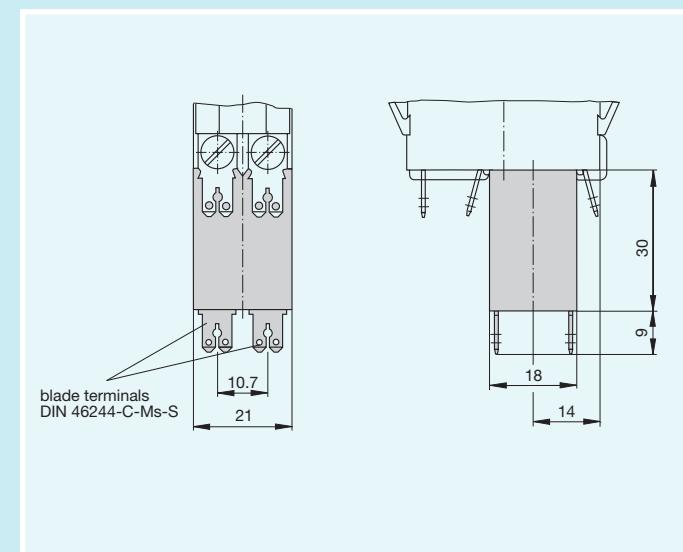

Description

A module which adds remote trip capability to all versions of type 3120. A voltage applied across the coil, by means of an external sensor for example, will cause disconnection of the main switch/circuit breaker mechanism.

Typical applications

Electrical monitoring of safety systems, remote trip.

Mass	approx. 53 g (complete assembly)

Description

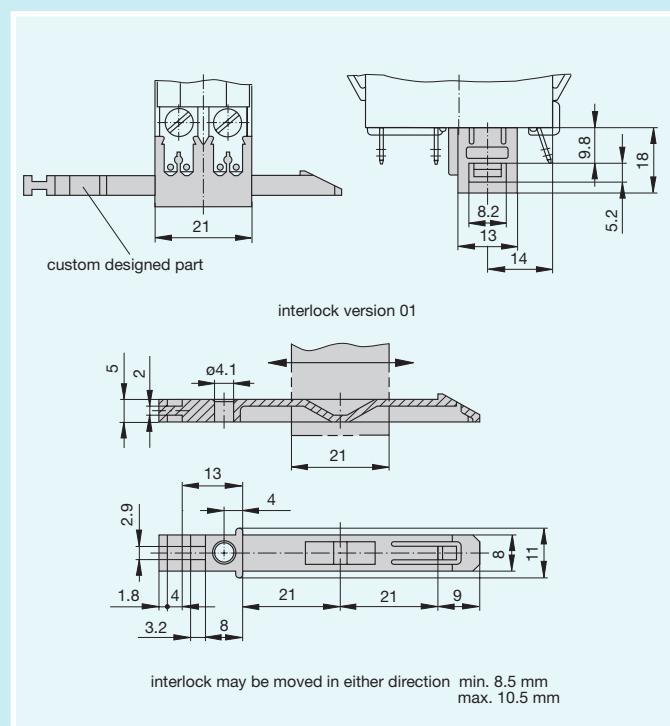

Suitable for use with all type 3120 versions, this module provides a mechanical safety interlock which, according to the option specified, prevents the main switch/circuit breaker mechanism from being reset/switched on. The actuator is intended for use with interlock systems to ensure that machinery cannot be operated without covers and safety guards in place, for instance.

Typical applications

Mechanical monitoring of safety systems, e.g. for garden shredders

E-T-A® Thermal Overcurrent Circuit Breaker 3130

Description

Single, two and three pole rocker switch/thermal circuit breakers (S-type TO CBE to EN 60934) of compact design for snap-in panel mounting. Available either with protection on one/both/all poles or, in the case of the double pole version, protection on one pole only. Neon illumination is optional (filament bulb for low voltages) and there is a choice of rocker colours.

Approved to CBE standard EN 60934 (IEC 934)

Typical applications

Motors, transformers, solenoids, household and office machines, hand tools.

Installation drawing

Accessories

Splash cover, transparent, for 3 pole version
X 221 258 01 (IP 54)

Description

Single pole thermal circuit breaker with push-to-reset, tease-free, trip-free, snap action mechanism (R-type TO CBE to EN 60934). Options include an additional unprotected circuit tap (-A3) and -KF housing particularly suited to high humidity and other damp conditions. Designed for threadneck panel mounting. Approved to CBE standard EN 60934 (IEC 934).

Typical applications

Motors, transformers, solenoids, hand tools, appliances.

Accessories

X 200 799 02	Water splash cover/knurled nut assembly for type 2-4100.
X 200 799 01	As above with the cover bonded to the nut for extra retention.
X 200 798 01/02	As X 200 799 02 and 01 above but featuring a slotted knurled ring for wrench front of panel tightening.
X 210 739 01	Water splash cover/hex nut assembly for type 2-4100. The concertina design is extended when the button trips to the OFF position.
X 201 296 03	Water splash cover transparent, with hex nut, without O ring.

Description

Single pole thermal circuit breaker with press-to-reset, tease-free, trip-free, snap action mechanism. Type 2-5000 is available with optional manual release (-H), type 2-5700 can be supplied as a push-push switch/circuit breaker (R-type TO CBE to EN 60934 in press-to-reset configuration: M-type when fitted with manual release -H; S-type with push-push operation). Fitted with flange or threadneck for panel mounting. Options include an additional unprotected circuit tap (-A3) and -KF housing particularly suited to high humidity and other damp conditions. Approved to CBE standard EN 60934 (IEC 934).

Typical applications

Motors, transformers, solenoids, battery chargers, power supplies, appliances, machinery, extra low voltage systems.

Accessories

For types 2-5000 and 2-5700

Y 303 563 01 Ten-way connecting/bus bar for use with circuit breakers with screw terminals.

For type 2-5000

Y 300 728 01 Water splash cover for type 2-5000.

Y 301 056 02 Fixing plate for Y 300 728 01.

Y 300 476 01 Rear terminal shroud.

For type 2-5700 with IG1 threadneck

X 200 799 02 Water splash cover/knurled nut assembly.

X 200 799 01 As above with the cover bonded to the nut for extra retention.

X 200 798 01/02 As X 200 799 02 and 01 above but featuring a slotted knurled ring for wrench front of panel tightening.

X 210 739 01 Water splash cover/hex nut. The concertina design is extended when the button trips to the OFF position.

For type 2-5700 with IG2 threadneck

X 210 663 01 Water splash cover/knurled nut assembly.

X 201 296 01 Water splash cover/hex nut assembly - without 'O'ring.

X 200 801 03 Water splash cover/hex nut assembly - with 'O'ring.

Separate hardware

Y 300 192 01 3/8" hex nut.

Y 300 284 02 3/8" knurled nut.

Y 300 116 02 12 mm hex nut.

Y 300 065 01 12 mm knurled nut.

X 200 801 08 Water splash cover, transparent, with hex nut, with O ring

Description

Single pole thermal circuit breaker with push-to-reset, tease-free, trip-free, snap action mechanism (R-type TO CBE to EN 60934; M-type when fitted with optional manual release feature). Designed for plug-in mounting with E-T-A sockets 10 and 16. The optional -KF housing is particularly suited to high humidity and other damp conditions.

Typical applications

Extra low voltage wiring systems and components.

Accessories

10R-K10	Modular snap-together surface mounted sockets, each accommodating two plug-in circuit breakers. With screw terminals.
10R-P10	As above but with push-on terminals.
10R-A10	As above but with a combination of screw and push-on terminals.
Y 301 166 02	Two-way brass connecting/bus bar links for type 10 sockets.
Y 301 166 01	Four-way brass connecting/bus bar links for type 10 sockets.
16	Single socket for symmetric EN rail mounting.
X 200 409 01	Adapter for mounting socket type 16 to asymmetric rail (G-profile).
Y 301 477 01	Blanking plug with insulated pins, for sockets 10, 20, 40, 60

Description

Single pole thermal circuit breakers with push-to-reset, tease-free, trip-free, snap action mechanism (R type TO CBE to EN 60934; M-type when fitted with manual release features/type 2-6200 only). Featuring auxiliary contacts (1 x N/C; 1 x N/O) as standard. Options include manual release (type 2-6200 only), an additional unprotected circuit tap (-A3), a centre reset position in which all contacts are open (-ZR: type 2-6200-H only), and -KF housing particularly suited to high humidity and other damp conditions. Approved to CBE standard EN 60934 (IEC 934).

Typical applications

Motors, transformers, solenoids, controls for oil and gas boilers.

Accessories

For type 2-6400 with IG1 threadneck

- X 200 799 02 Water splash cover/knurled nut assembly.
- X 200 799 01 As above with the cover bonded to the nut for extra retention.
- X 200 798 01/02 as X 200 799 02 and 01 above but featuring a slotted knurled ring for wrench front of panel tightening.
- X 210 739 01 Water splash cover/hex nut. The concertina design is extended when the button trips to the OFF position.

For type 2-6400 with IG 2 threadneck

- X 210 663 01 Water splash cover/knurled nut assembly.
- X 201 296 01 Water splash cover/hex nut assembly - without 'O'ring.

Separate hardware

- Y 300 192 01 3/8" hex nut.
- Y 300 284 02 3/8" knurled nut.
- Y 300 116 02 12 mm hex nut.
- Y 300 065 01 12 mm knurled nut.

E-T-A® Thermal-Magnetic Overcurrent Circuit Breakers

**Single and multi pole
thermal-magnetic circuit breakers (CBEs)
with and without auxiliary contacts**

**Voltage ratings max. 3 AC 433 V, AC 250 V,
DC 65 V**

Current ratings 0.05...32 A

A latching type bimetal is combined with a magnetic coil to provide the joint benefits of delayed operation for low level over-current protection and fast magnetic action on higher value short circuits.

E-T-A has perfected thermal-magnetic technology to provide a choice of mounting options, covering an extensive range of current ratings all with high precision performance. These models are well suited to telecommunications, process control and other industrial applications where sophisticated equipment needs correct - and dependable - protection. The narrow profile of E-T-A thermal-magnetic circuit breakers enables high density packaging solutions.

Additional features to ensure perfect fit of device to application include options such as auxiliary contacts for status signalling and the choice of push button or toggle manual control. There are also single, two and multi-pole models in a range of types and variants. Plug-in versions provide a convenient means of positive circuit interruption by simply removing the circuit breaker - ideal for safety critical systems during maintenance and shutdown.

E-T-A thermal-magnetic circuit breakers for track mounting can be fitted to different standard rail designs, either direct in the case of combi-foot models, or with an E-T-A adapter.

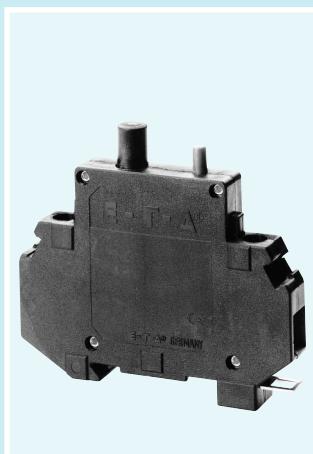

All models are available in special configurations with separate thermal and thermal-magnetic circuits, providing capability for overload protection together with an independent control circuit, which may be operated in response to an external sensor input.

All dimensions without tolerances are for reference only. In the interest of improved design, performance and cost effectiveness the right to make changes in these specifications without notice is reserved. Product markings may not be exactly as the ordering codes.

Description

Single pole thermal-magnetic circuit breaker with tease-free, trip-free, snap action mechanism and two button operation (M-type TM CBE to EN 60934). Featuring a narrow profile housing, recessed terminals, standard EN rail mounting, and precision CBE performance. Complies with CBE standard EN 60934 (IEC 934)

Typical applications

Process control systems, instrumentation.

Internal connection diagram

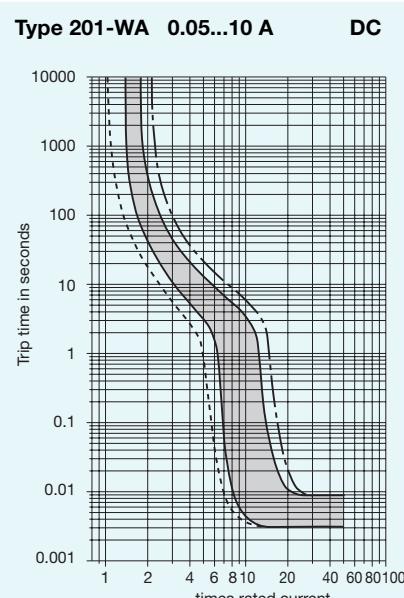

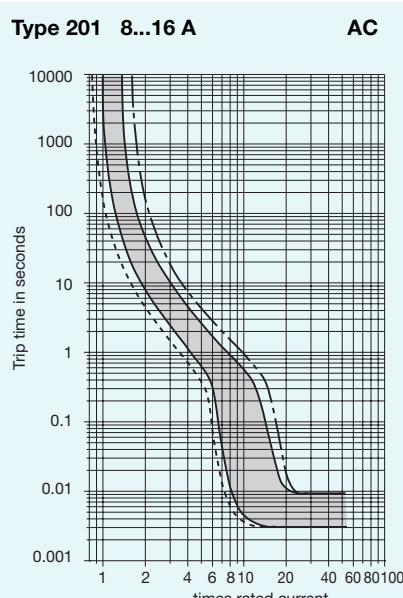

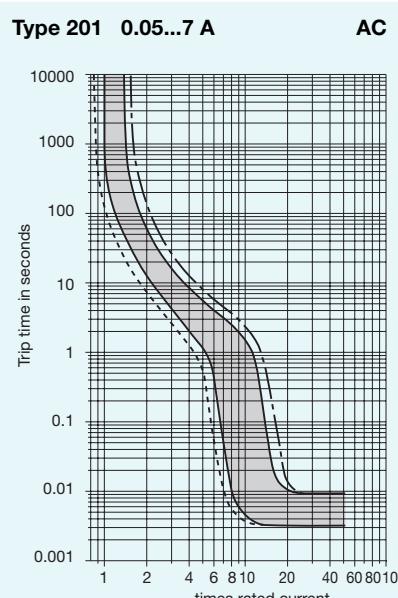

Installation drawing for protection class II (IEC 730-1)

Time/current characteristics are calibrated at 23°C (see page 8). For operation at other temperatures please apply the factors below to determine the circuit breaker rating required.

Ambient temperature °C	-20	-10	0	+23	+40	+50	+60
Multiplication factor	0.76	0.84	0.92	1	1.08	1.16	1.24

Typical time/current characteristics

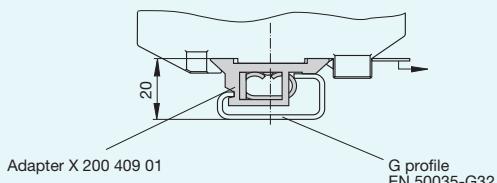

Magnetic tripping currents are increased by 20 % on DC supplies.

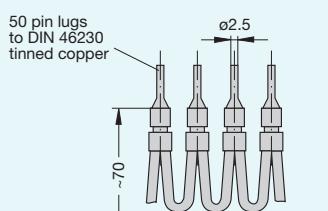

Magnetic tripping currents are decreased by 20 % on AC supplies.

Description

One, two and three pole thermal-magnetic circuit breakers with trip-free, snap action mechanism and toggle actuation (S-type TM CBE to EN 60934/IEC 934). Designed for panel or plug-in mounting. Available with auxiliary contacts (1 x N/O, 1 x N/C) for status signalling and fitted with an unprotected shunt tap terminal as standard. Two and three pole models are internally linked to ensure that both/all poles trip in the event of an overload on one pole, even if the actuator is held in the ON position. A choice of characteristic curves further extends the range of applications possibilities for these CBEs. Approved to CBE standard EN 60934 (IEC 934).

Typical applications

Process control equipment, robotics, machine tool control, communications systems, instrumentation. Special versions, e.g. for aggressive environmental conditions and low voltages (5 V) on request.

Typical time/current characteristics

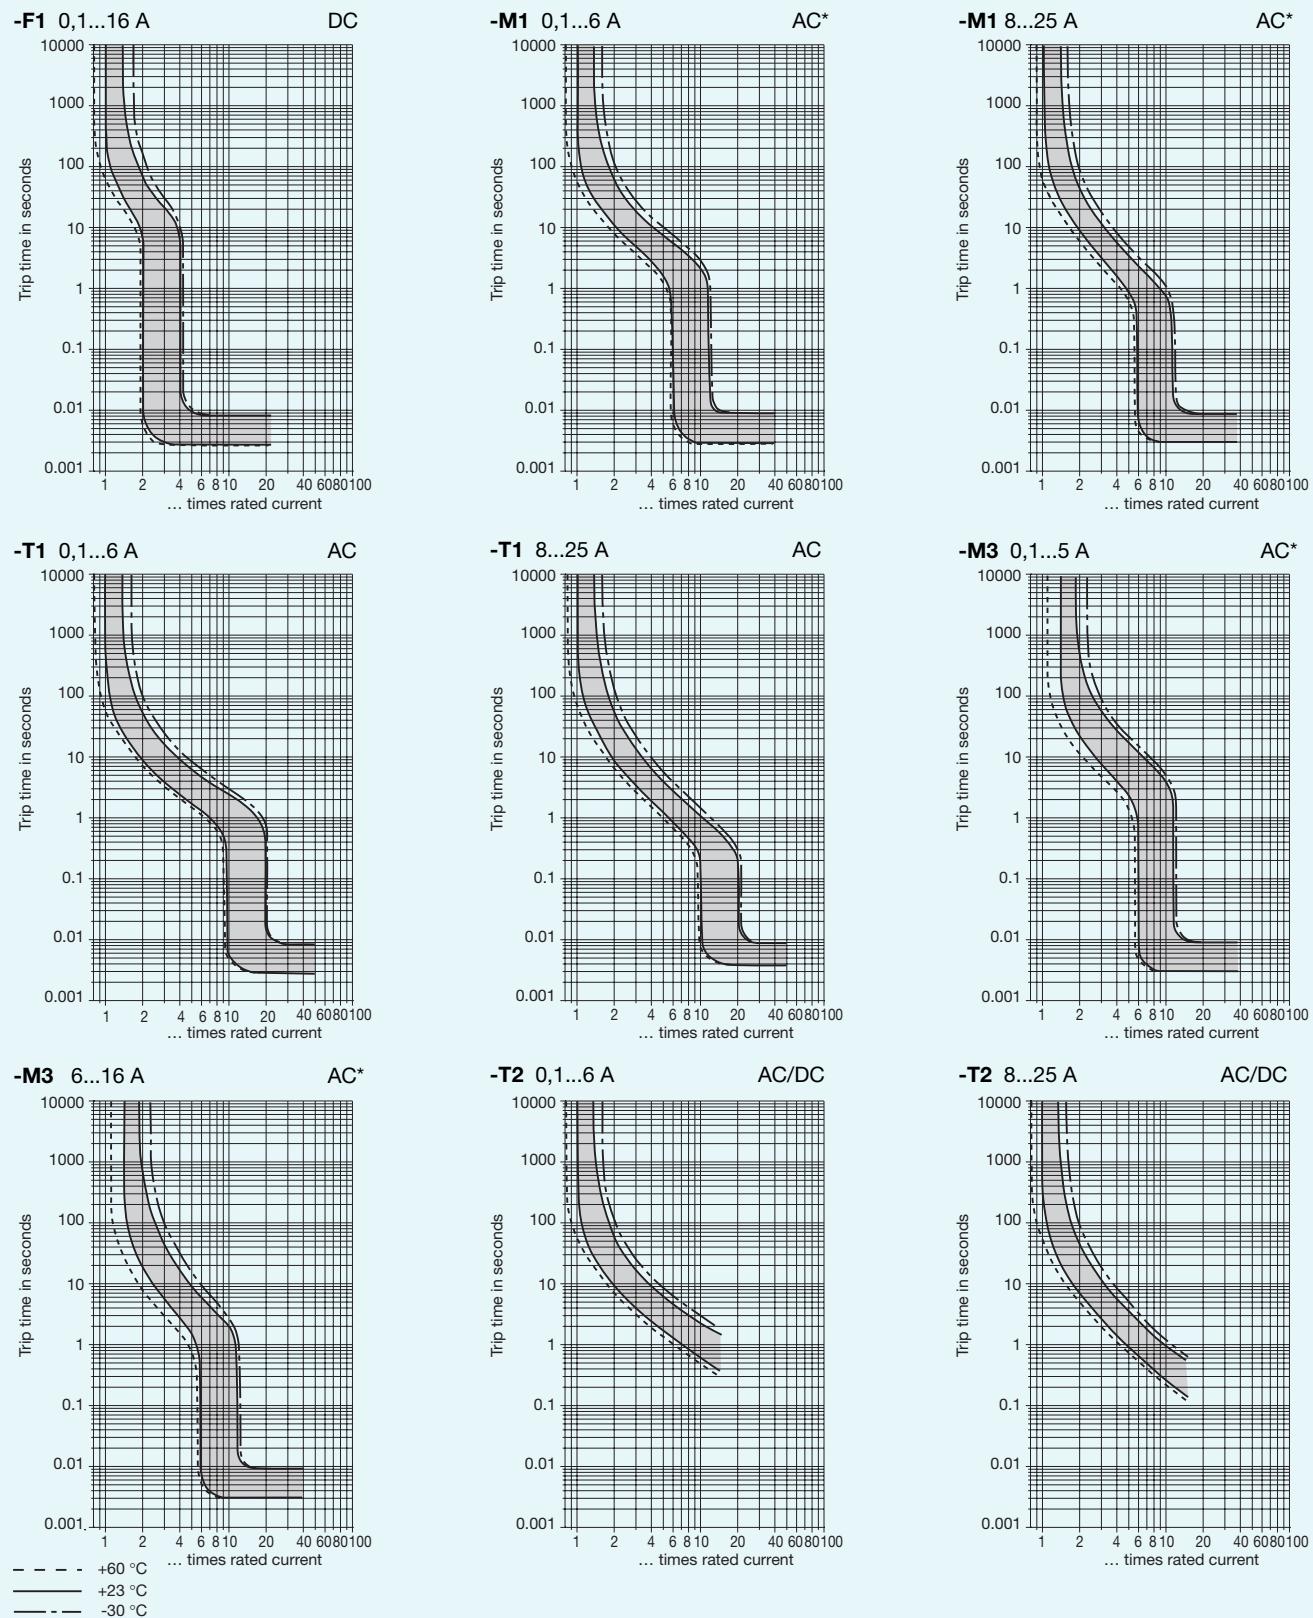

Time/current characteristics are calibrated at 23°C (see page 8). For operation at other temperatures please apply the factors below to determine the circuit breaker rating required.

Ambient temperature °C	-30	-20	-10	0	+10	+23	+30	+40	+50	+60
Multiplication factor	0.76	0.79	0.83	0.88	0.93	1	1.04	1.11	1.19	1.29

Multi pole devices: all poles symmetrically loaded. With single pole overload, thermal tripping will be at max. $1.7 \times I_N$ with curves F1, M1 and T2, and at max. $2.2 \times I_N$ with curve M3.

N.B.

* Magnetic tripping currents are increased by 30% on DC supplies.

ETA® Thermal-Magnetic Circuit Breaker E2210-...

Description

Thermal-magnetic circuit breaker mounted on Euro Card for 19" rack mounting, with one Euro Card accommodating one or two single pole, double pole or three pole circuit breakers. Convenient toggle actuation enables series 2210 additionally to be used as an ON/OFF switch. A red LED is located in the front frame of the Euro Card, indicating the switching status of the circuit breaker (via the auxiliary circuit).

E2210-...

Typical applications

Process control, measuring and control systems, telecommunications.

Sockets for Euro Cards

Description

The following sockets may be used with single pole circuit breakers:

OZ041Z000004

24/7 pole mixed socket to DIN 41612 - form M.
Connection: 7 pole for 6.3x0.8 mm connectors
and 24 pole midi-wire wrap posts (1 x 1 mm).

OZ041Z000007

24/7 pole mixed socket to DIN 41612 - form M.
Connection: 7 pole for 6.3x0.8 mm connectors
and 24 pole for 2.8x0.8 mm connectors.

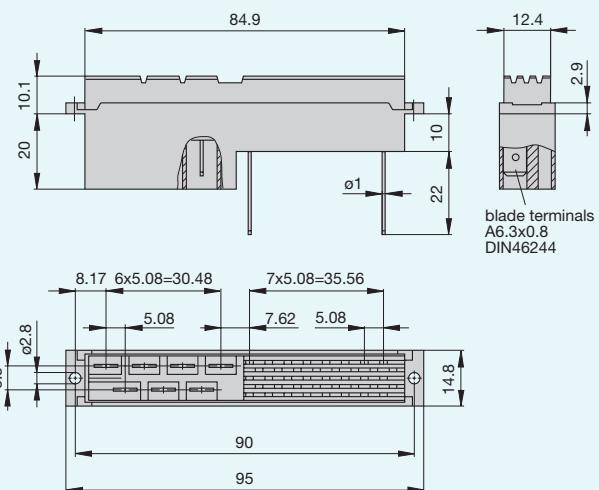

OZ041Z000005

A 15 pole socket to DIN 41612, form H, for 6.3 x 0.8 mm
connectors is required in addition to the socket mentioned above, if two
double pole or two three pole circuit breakers are fitted on one Euro
Card.

E-T-A® 19" Rack

Description

19" rack fitted with E-T-A sockets 63-P10-Si to accommodate thermal-magnetic circuit breakers with each terminal block accepting up to 6 circuit breakers. Three rack sizes are available.

Typical applications

Circuit breakers that may be accommodated on 19" racks fitted with E-T-A sockets 63-P10-Si:

- type 2210 see pages 105 - 108
- type 3600 see pages 161 - 164
- type 3900 see pages 161 - 164

Technical data

Type No.	Height (1 HE = 44.45 mm)
X 201 096 01	4 HE
X 201 097 01	4 HE
X 211 530 01	2 HE
Material:	The 19" rack and the mounting flanges are made of 2 mm thick steel sheet.
Colour:	RAL 7032, grey

Ordering information

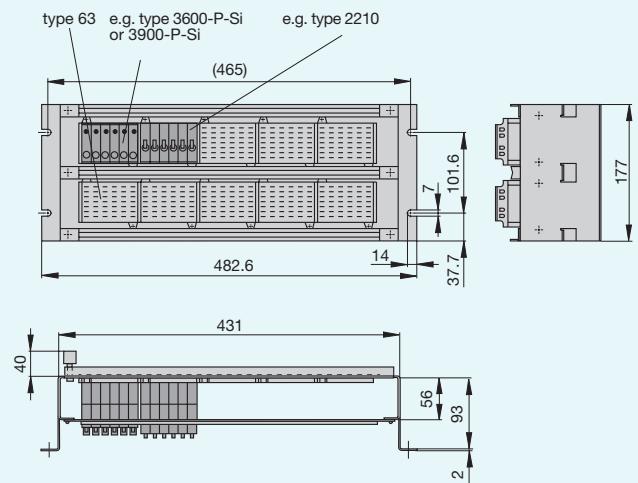

X 201 097 01	for 10 E-T-A terminal blocks 63-P10-Si
X 211 530 01	for 5 E-T-A terminal blocks 63-P10-Si
X 201 096 01	for 9 E-T-A terminal blocks 63-P10-Si plus 1 fuse holder

Connection

by means of one or two 4 pole female multi-pin connectors for max 4 mm² cables, which may be connected either on the right or left side of the rack.

X 211 530 01
19" rack with 5 E-T-A sockets 63-P10-Si

Description

The compact 19" rack features aluminium profiled cross members with an anodized front plate. The panel cutout accommodates up to 30 positions numbered 1 through 30. Blanks cover unused positions, with 6, 12, 24 or 30 being "open".

The rack can be fitted with plug-in type circuit breakers 3600/3900, 2210 or E-T-A Solid State Remote Power Controller (SSRPC) E-1048-600. Please specify the correct option according to the ordering information shown, as different depths must be allowed for.

Four bus bars (X1...X4) with 10 positions each (6.3 mm blade terminals) provide easy terminal connection.

Prewired options available ex factory are:

- Parallel connected feed (2.5 mm^2) with separate supply for each socket via bus bars X1 and X2.
Choice of wiring colours: black, red, blue, grey. Outputs are not connected.
 - Parallel connected auxiliary contacts (N/C) grouped per socket, 0.75 mm^2 , via bus bars X3 (supply) and X4 (signallisation).
Choice of wiring colours: black, red, blue, grey.
 - Series connected auxiliary contacts (N/O) of all positions with 0.75 mm^2 , via bus bars X3 (feed) and X4 (signallisation).
Choice of wiring colours: black, red, blue, grey.
 - Custom designed connection according to specification.

Other fittings, e.g. back-up fuse, separate circuits, custom designed markings etc., are available to special order.

Technical data

19" rack	length: 84 TE total length: 426.72 mm height: 2 HE total height: 88.90 mm depth: 184 mm material: aluminium, anodized
Front cutout for 30 positions, numbered 1 through 30	1 socket = 6 positions (No. 1 - 6) 2 sockets = 12 positions (No. 1 - 12) 3 sockets = 18 positions (No. 1 - 18) 4 sockets = 24 positions (No. 1 - 24) 5 sockets = 30 positions (No. 1 - 30) blanks cover unused sockets.

Description

E-T-A rails distribute electrical power in telecommunications, automation, data and control systems. They have been designed to industry standard requirements and are suitable for mounting in ETSI control cabinets. These distribution rails are supplied with mounting bracket, cover, 6 blanks and withdrawal tool.

Live parts in terminal areas are protected against brush contact (VDE 106, part 100).

Typical applications

Telecommunications systems using ETSI racks; process control, measuring and control systems.

Internal connection diagram

Description

E-T-A rails distribute electrical power in telecommunications, automation, data and control systems. They have been designed to the BW7R design requirement of the telecommunications industry. Mounting brackets and cover are not included.

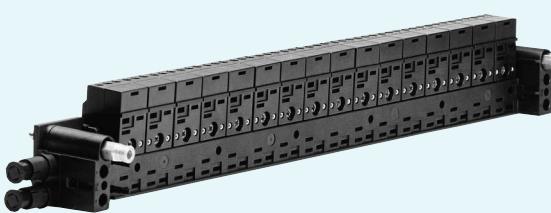

Live parts in terminal areas are protected against brush contact (VDE 106 part 100).

Typical applications

Telecommunications systems of the BW7R design; process control, measuring and control systems

Connection

Installation

Internal connection diagram

The distribution rail is secured to the mounting bracket by means of the captive screws. A moulded cover is provided.

Two aluminium brackets carry the distribution rail and the moulded cover, at the same time leaving room for the cables. Several units can similarly be mounted together.

The supply cable which should be protected to a max. of 100 A is connected via a terminal block to the plus, minus and signal cables. Further distribution rails may be connected with power on by means of the insulated slide pins.

The distribution rail will accommodate up to 16 circuit breakers or similar components.

An intermediate block is fitted for each position to facilitate installation of the load circuits in service. All 16 plug-in blocks can be inserted or removed by the Phillips screw.

Load circuits can be safely installed without interrupting the supply. Finger-safe distribution rail components can also be inserted with power on.

Plug-in connections ensure ease of installation.

The cover and blanks provide front of rail protection.

Description

E-T-A distribution rails ensure ease of expansion and retrofit without the need to disconnect the system. Safe operation with power on is ensured by the fully insulated plug-in design, enabling industry demands for trouble-free operation to be satisfied. Major benefits of this well-proven system include high reliability and user convenience.

E-T-A distribution rails meet the needs of many power supply systems including the 7R design of the German telecommunications market.

Even where space is at a premium E-T-A circuit breakers type 2210-S291-P9M2-410005-.., for both AC and DC use, will protect all downstream electrical equipment from overcurrent and short-circuits as well as providing protection against electrical shock hazards.

The Bw7R type 2 configuration can be equipped with one standard unit and one modified version for remote supply devices. Additional versions of the standard type are suitable both for telecommunications and process control and automation.

Application

● Telecommunications

Terminal rails of the Bw7R type 2 design can be connected to power supplies providing AC 230 V (max. 275 V) or DC 60 V (max. 75 V).

A back-up fuse with a max. rating of 100 A should be connected. Power distribution is by means of 16 outputs which are protected by E-T-A circuit breakers.

Expansion is possible as required.

Power supply units of telecommunication equipment are typically connected downstream.

- **X2210-K0116 B** is designed to power system units

- **X2210-K0212 F** is designed for remote feeds

Both terminal rails can be mounted in Bw7R racks, one unit requiring a space of 500 mm.

● Process control, automation and telecommunications

Initially designed for Bw7R (vertical mounting), the terminal rails are also suitable for 19" control cabinets and other designs.

2

Features

● Fully insulated design

Absolutely safe in operation even when retrofitted, as live parts cannot be touched.

● Ease of mounting

Fastening of the assembly is by means of two bolts only.

● Ease of electrical installation

The connection of only plus, minus and signal cable is required to operate the distribution rail for 16 outs. No further wiring is necessary.

● Cost-effective expansion

Distribution rails can readily be installed in multiples. Safe electrical connection of several rails, even during systems operation, is by use of coupling pins.

● No costly system downtime

Live components need not be disconnected when the system is expanded.

● Safe connection of the supply line

Plug-in intermediate elements provide safe connection of the supply line independent of its position, thereby minimising installation difficulties.

● Ease of access

Distribution rails can be mounted from the front. The load lines which are preconnected to the adapter plug can be easily inserted in the cable space obviating the need for costly threading.

● Compact design

Optimum utilisation of the space available as circuit breakers, distribution rail and accessories have been designed in close cooperation with users and system designers.

● Electrical safety

The system is suitable for voltages up to AC 275 V or DC 75 V (max. 100 A back-up fuse; 25 mm² connecting cable).

Insulation co-ordination in conformance with IECF 664 and 664A.

Distribution rails

● Distribution rail X2210-K0316 E

Positions 8 and 9 of this type are physically isolated so that two independent distribution rails with 8 outputs each are available in one housing.

The signal contact rail is not isolated.

Feed-in from both sides.

Two separate power supplies which can carry different potentials (e.g. DC 65 V; AC 230 V) are accommodated on 500 mm spacings.

● Terminal strip X2210-K0404 E to X2210-K0404 E

A compact version of the distribution rail is available for applications requiring small distribution rails with up to 9 outputs only but providing the same benefits as the standard version.

Feed from one side allows the supply of 4 to 9 outputs. The compact distribution rail can be used where space is at a premium because its length may be varied.

● Group signalisation

The circuit breakers suitable for the distribution rails comprise an auxiliary contact closing when the main contact opens.

All auxiliary contacts are placed above the distribution rail, parallel between ground and the group signalisation rail.

● Single signalisation

Single signalisation can be provided by means of a modified intermediate element. The ground connection generally required in telecommunication systems is obviated.

"Signal potential" is applied to the terminal of the intermediate element as soon as the circuit breaker trips. The system manufacturer should however provide separate signal lines (max. 16) which should be connected to the ground terminal of the intermediate element.

E-T-A® Thermal-Magnetic Circuit Breaker 2210-T2..

Description

One, two and three pole thermal-magnetic circuit breakers with trip-free, snap action mechanism and toggle actuation (S-type TM CBE to EN 60934/IEC 934). Featuring a combi-foot design for both symmetric and asymmetric rail mounting. Available with auxiliary contact (1 x N/O or 1 x N/C) for status signalling. Two and three pole models are internally linked to ensure that both/all poles trip in the event of an overload on one pole, even if the actuator is held in the ON position. This CBE can be supplied in current ratings to 32 A with a choice of characteristic curves. All screw terminals are recessed for safety. Approved to CBE standard EN 60934 (IEC 934).

Typical applications

Process control equipment, robotics, machine tool control, communications systems, instrumentation.

E-T-A® Thermal-Magnetic Circuit Breaker 2215-L.../G...

Description

Miniaturised single pole thermal-magnetic circuit breakers with trip-free, snap action mechanism and toggle actuation (S-type TM CBE to EN 60934). Two designs provide the option of either printed circuit board or threadneck panel mounting. A separate shunt tap terminal and auxiliary contacts are available. Fast acting, medium or long delay characteristics can be specified for both models. Complies with CBE standard EN 60934 (IEC 935).

Typical applications

Control equipment, communications systems, instrumentation.

Description

Thermal-magnetic circuit breaker mounted on Euro Card for 19" rack mounting, with one Euro Card accommodating up to three circuit breakers. Convenient toggle actuation enables series 2210 additionally to be used as an ON/OFF switch. A red LED is located in the front frame of the Euro Card, indicating the switching status of the circuit breaker (via the auxiliary circuit).

Typical applications

Process control, measuring and control systems, telecommunications.

Select the circuit breakers to above ordering information. For further information please refer to pages 135 - 137.

It is possible to fit circuit breakers of mixed current ratings on the Euro Card.

Please add "Circuit breakers to be mounted on Euro Card" to the circuit breaker designation when ordering so that the applicable suffix number for the special version (E2215-L2..) can be determined.

19" racks may also be fitted with one or two circuit breakers by the customer, using industry standard components such as base plates, front plates with handle, sockets. Connection by means of blade terminals 6.3x0.8 mm.

Technical data

Circuit Breaker

Main circuit:

voltage rating	AC 250 V (50/60 Hz); DC 48 V
current rating range	0.05...10 A
standard current ratings	0.1 0.2 0.3 0.4 0.5 0.6 0.8 A 1 1.5 2 2.5 3 4 5 A 6 8 10 A

Auxiliary circuit:

voltage rating	AC 250 V/DC 28 V
current rating	1 A

Other data see type 2215

Front plate

Dimensions:

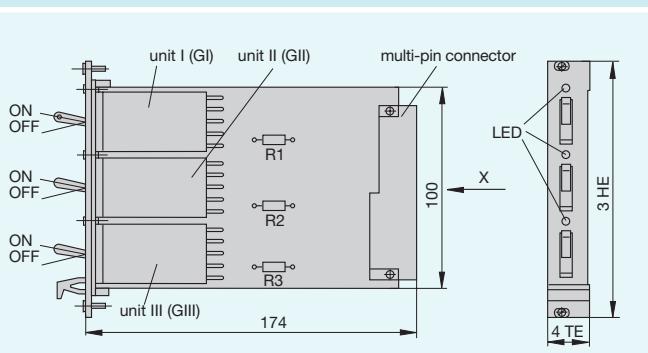

width	4 TE (1 TE = 5.08 mm)
height	3 HE (1 HE = 44.45 mm)

E-T-A® Thermal-Magnetic Circuit Breaker 2215-F1...

Description

Miniaturised two pole thermal-magnetic circuit breakers with trip-free, snap action mechanism and toggle actuation (S-type TM CBE to EN 60934). Fitted with panel mounting flange and push-on termination, also suitable for mounting on Euro Cards. Available with auxiliary contacts and a choice of fast, medium or long delay characteristics. Complies with CBE standard EN 60934 (IEC 934).

Typical applications

Control equipment, communications systems, instrumentation.

2215-F1...

E-T-A® Thermal-Magnetic Circuit Breaker 3120-...-M1-..

Description

Single or two pole rocker switch/thermal-magnetic circuit breaker (S-type TM CBE to EN 60934). The addition of a magnetic tripping module to the type 3120 range described in catalogue section 1 extends the choices available to include single pole with thermal-magnetic protection; double pole switching with thermal-magnetic protection on one pole, thermal protection on the other; double pole switching with thermal-magnetic protection on one pole only. All are offered with rocker switch or push button control - two buttons for ON/OFF or one button press-to-reset only, in designs to suit one of three different panel cut-out sizes. Neon illumination (filament bulb for low voltages) is optional. Approved to CBE standard EN 60934 (IEC 934).

Typical applications

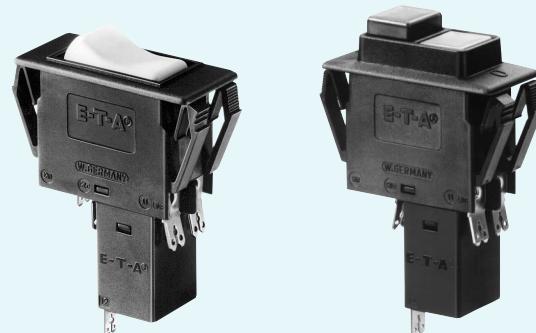

Motors, machine tools, office equipment, appliances.

Accessories

- Y 303 068 01 Insulated cover, snap-fitted to the exposed areas of the two incoming terminals (when terminal screws are not specified) to provide brush contact protection.
- Y 303 675 01 Retaining clip for -F3 mounting frame for panel thicknesses under 2 mm.
- Y 303 675 02 As above for panel thicknesses under 4 mm.
- Y 303 885 31 Blanking piece in -F3 size mounting frame.
- X 210 832 01 Separate water splash cover for use with -F4 and -F5 size mounting frames.

E-T-A® Thermal-Magnetic Overcurrent Circuit Breaker 3200

Description

Single pole thermal-magnetic circuit breaker with tease-free, trip-free, press-to-reset, snap action mechanism and additional manual release (M-type TM CBE to EN 60934). Designed for plug-in mounting with E-T-A sockets 10 and 16. Complies with CBE standard EN 60934 (IEC 934).

Typical applications

Control equipment, extra-low voltage wiring systems and components.

Accessories

10R-K10	Modular snap-together surface mounted sockets, each accommodating two plug-in circuit breakers. With screw terminals.
10R-P10	As above but with push-on terminals.
10R-A10	As above but with a combination of screw and push-on terminals.
Y 301 166 02	Two-way brass connecting/bus bar links for type 10 sockets.
Y 301 166 01	Four-way brass connecting/bus bar links for type 10 sockets.
16	Single socket for symmetric EN rail mounting.
Y 301 477 01	Blanking plug with insulated pins, for sockets 10, 20, 40, 60.
X 210 589 01	50-way 1.5mm ² cable links with pre-fitted connection lugs for type 10F-K10/-A10 sockets.
X 210 589 02	As above but with 2.5mm ² cable links.
X 210 588 01	100-way 1.5mm ² cable links with pre-fitted push-on connectors for type 10F-P10 sockets.
X 210 588 02	As above but with 2.5mm ² cable links.

E-T-A® Thermal-Magnetic Circuit Breakers 3300/3400

Description

Single pole thermal-magnetic circuit breakers with tease-free, trip-free, press-to-reset, snap action mechanism (R-type TM CBE to EN 60934; M-type with manual release -H). Available with fast acting and standard magnetic tripping characteristics - types 3300 and 3400 - both with threadneck panel mounting. Options include auxiliary contacts, a separate shunt tap terminal (-A3), and pull-to-trip manual release (-H). Complies with CBE standard EN 60934 (IEC 934).

Typical applications

Control systems, instrumentation, medical equipment, machine tools, robotics.

Accessories

- X 210 663 01 Water splash cover/knurled nut assembly for version with press-to-reset only (-IG2).
- X 200 801 08 Concertina style splash cover/hex nut assembly for version with press-to-reset only (-IG2).

Typical time/current characteristics

Type 3300 0.05...7 A

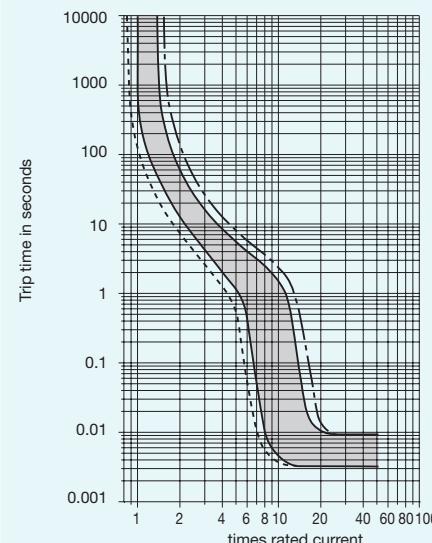

Type 3300 8...16 A

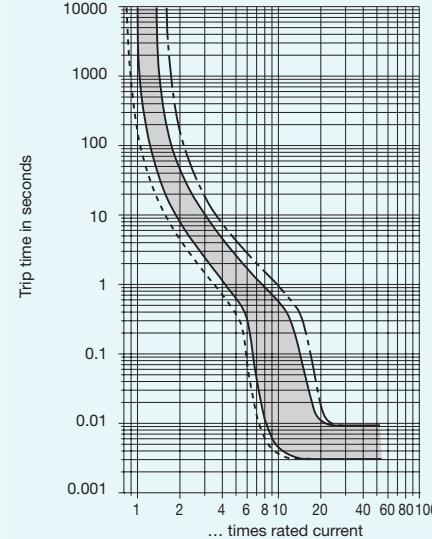

Magnetic tripping currents are increased by 20% on DC supplies.

Type 3400 0.05...7 A

Type 3400 8...16 A

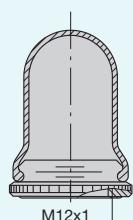

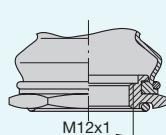

Magnetic tripping currents are increased by 20% on DC supplies.

Accessories

For push buttons with M12 moulded threadneck (-IG2)

Hex nut with splash cover, black
X 201 296 01 (IP 64)
X 200 801 08 (IP 66) with O-ring

Water splash cover, transparent with knurled nut
X 210 663 01 (IP 64)

Time/current characteristics are calibrated at 23°C (see page 8). For operation at other temperatures please apply the factors below to determine the circuit breaker rating required.

Ambient temperature °C	-20	-10	0	+23	+40	+50	+60
Multiplication factor	0.76	0.84	0.92	1	1.08	1.16	1.24

Description

Single pole thermal-magnetic circuit breaker with tease-free, trip-free, snap action mechanism and two button operation (M-type TM CBE to EN 60934). Featuring a flange for panel mounting, and optional auxiliary contacts and unprotected shunt tap terminal. Type 4000 offers lower internal resistance values and is fitted as standard with auxiliary contacts and an intermediate reset position in which all contacts are isolated. Complies with CBE standard EN 60934 (IEC 934).

Typical applications

Control systems, instrumentation, medical equipment, machine tools, robotics, communications systems.

Ordering information

Type No.
3500 standard version
4000 low resistance version
Mounting (optional)
F11 flange with additional M3 insertion nuts
Terminal design
P10 blade terminals 6.3-0.8, tinned
K20 screw terminals M 3.5x5.5 with clamp (not with -Si or type 4000)
Shunt terminal (optional)
A3 same as main terminals (up to $I_N = 7$ A, max. load 5 A)
Auxiliary contacts (optional with type 3500)
Si auxiliary contacts, silver plated terminals one each N/O and N/C
ZR-Si auxiliary contacts with intermediate position (standard with type 4000)
Current ratings
0.05...16 A (type 3500)
0.05...10 A (type 4000)
3500 - [] - P10 - A3 - Si - 10 A ordering example

The exact part number required can be built up from the table of choices shown above. Ordering references for optional features should be omitted if not required.

ET^A® Thermal-Magnetic Circuit Breakers 3500

Special version 3500-...-2100

Single pole thermal-magnetic overcurrent circuit breaker with slow magnetic trip curve, suitable for high inrush currents (up to $12 \times I_{N}$). Suffix -2100 is also available for types 3400 and 3600.

Enquire for further details.

Typical applications

Industrial control systems, telecommunications, etc.

Special version 3500-...-2350

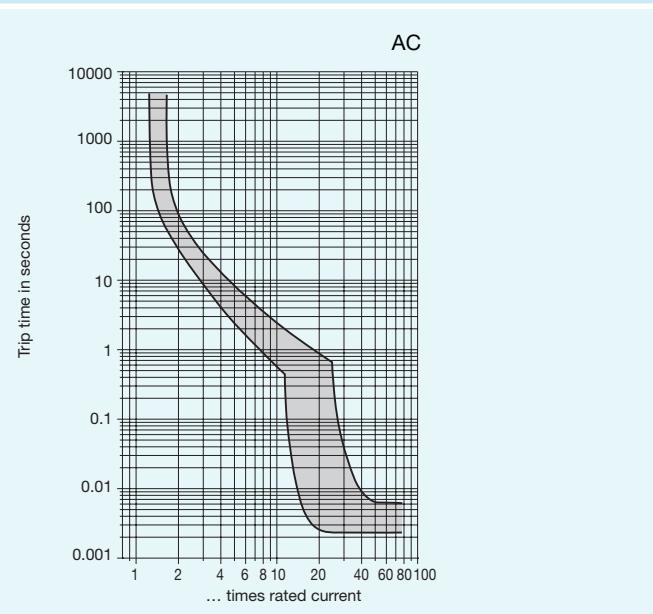

Single pole thermal-magnetic circuit breaker suitable for high ambient temperatures. The special rating of the circuit breaker allows resetting at no load in ambient temperatures up to $+80^{\circ}\text{C}$. Suffix -2350 is also available for types 3400 and 3600.

Enquire for further details.

Description

Single pole thermal-magnetic circuit breaker with tease-free, trip-free, snap action mechanism and two button operation (M-type TM CBE to EN 60934). Designed for plug-in mounting with E-T-A sockets 17-P10-Si, 23-P10-Si, 63-P10-Si; or panel mounting using E-T-A clips. Featuring an unprotected shunt tap terminal and optional auxiliary contacts. Type 3900 offers lower internal resistance values and is fitted as standard with auxiliary contacts and an intermediate reset position in which all contacts are isolated.

Complies with CBE standard EN 60934 (IEC 934).

Typical applications

Process control systems, instrumentation, communications systems.

Accessories

23-P10-Si	Lug mounted socket. With push-on terminals.
63-P10-Si	Lug mounted socket. With push-on terminals.
17-P10-Si	EN rail mounted socket.
17-P10-Si-20025	Socket supplied with adapter fitted or asymmetric rail mounting (G-profile).
Y 301 398 02	Withdrawal tool - spring metal clip to aid withdrawal of the circuit breaker from its mounting socket.
X 210 588 01	100-way 1.5mm ² cable links with pre-fitted push-on connectors for type 10F-P10 sockets.
X 210 588 02	As above but with 2.5mm ² cable links.
Y 300 504 02	One pair of clips to facilitate panel mounting of types 3600 and 3900.

Single and multi pole magnetic and hydraulic-magnetic circuit breakers (CBEs)

Voltage ratings max. 3 AC 415 V
AC 250 V, DC 80 V

Current ratings 0.006...100 A

The E-T-A range of magnetic CBEs includes the miniature Printo-magnetic series (808 and 809) with extremely fast operating characteristics for printed circuit board applications, and series 8330, 8340 and 8350 for higher current duties.

Types 808 and 809 cover ratings from as low as 0.006 A up to 5 A with low internal resistance values. Their unique method of magnetic operation not only provides rapid response times, but is also suited to impulse disconnection for control applications.

Type 8340-G provides the option of either single round hole panel mounting or plug-in mounting utilising an E-T-A series 18 base. On/off control is by means of a push/pull button with visual indication of the off/tripped position. Types 8340-F and 8340-T, with industry standard dimensions and toggle actuation, are panel mounted with two fixing bolts (8340-F) or rail mounted with combi-foot (8340-T).

All models within the 8330, 8340 and 8350 range offer a choice of fast acting magnetic operation or hydraulically delayed switching characteristics which may be selected to suit a range of application requirements such as those of the telecommunications and process control industries, where precise and dependable protection of sophisticated systems cannot be compromised. The 8330 is available in single and two pole models, multipole options are also available for types 8340 and 8350. Single, two and three pole models are available with various internal circuit configurations to provide status signal and relay trip functions.

All dimensions without tolerances are for reference only. In the interest of improved design, performance and cost effectiveness the right to make changes in these specifications without notice is reserved. Product markings may not be exactly as the ordering codes.

○ = optional

Description

Single pole miniaturised magnetic circuit breaker with unique high-speed operating mechanism and push/pull on/off manual actuation. Fitted with electrically separate excitation and switching circuits, and one pair of auxiliary contacts which close when the main circuit is open. Also suitable for impulse operation. Designed for printed circuit board mounting. Low temperature sensitivity.

Typical applications

Printed circuit boards and components, safety and control systems.

Description

Single and double pole magnetic and hydraulic-magnetic circuit breaker with trip-free mechanism and toggle or rocker actuation. A choice of fast magnetic only or hydraulically delayed switching characteristics (S type MO or HM CBE to EN 60934/IEC 934) ensures suitability for a wide range of applications. Low temperature sensitivity at rated load. Industry standard dimensions and threadneck or snap in panel mounting. Complies with CBE standard EN 60934 (IEC 934).

Typical applications

Power supplies, process control, switchgear and controlgear

Description

Single, two and three pole magnetic circuit breakers with tease-free, trip-free, snap action mechanism and push/pull on/off manual actuation. A choice of fast magnetic only or hydraulically delayed switching characteristics (S type MO or HM CBE to EN 60934) ensures suitability for a wide range of applications. Convenient threadneck panel or plug-in mounting, and with a white push button indicator band showing clearly the tripped/off position. Available with auxiliary contacts (1 x N/O, 1 x N/C) for status signalling and fitted with an unprotected shunt tap terminal as standard. Approved to CBE standard EN 60934 (IEC 934).

Typical application

Control equipment, communications systems, power semiconductors.

Description

Single and multipole magnetic circuit breakers with trip-free, snap-action mechanism and toggle actuation. A choice of fast magnetic only or hydraulically delayed switching characteristics (S-type MO or HM CBE to EN 60934) ensures suitability for a wide range of applications. Industry standard dimensions and panel mounting. Options include auxiliary changeover contacts, or relay trip function. Approved to CBE standard EN 60934 (IEC 934).

Typical applications

Control equipment, communications systems, transportation, power supplies.

Accessories

- X 211 117 01 Single pole splash cover with fixing plate.
- X 211 118 01 Two pole splash cover with fixing plate.
- X 211 119 01 Three pole splash cover with fixing plate.

Description

Modular distribution rail, each module accommodating 2 magnetic or hydraulic-magnetic circuit breakers and associated load terminals. Circuit breaker status indication (group signalisation) is via 2 busbars. Power supply is via right- or left-side terminal block. Live parts in the plug-in and supply feed terminal areas are protected against brush contact. Circuit breakers may be replaced with power on.

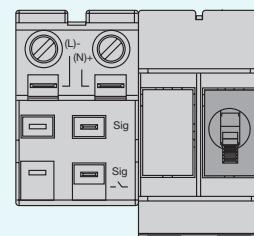

Typical applications

Telecommunications and cellular communication systems

Internal connection diagram

Description

Distribution rail for one or two modules suitable for ETSI control cabinet and similar applications. One module comprises 4 positions for magnetic or hydraulic-magnetic circuit breakers and associated line and load terminals. Circuit breaker status indication (group signalisation) is via two busbars. The modular design facilitates the operation of a single distribution rail at two different voltages.

Live parts in the plug-in and supply feed terminal areas are protected against brush contact.

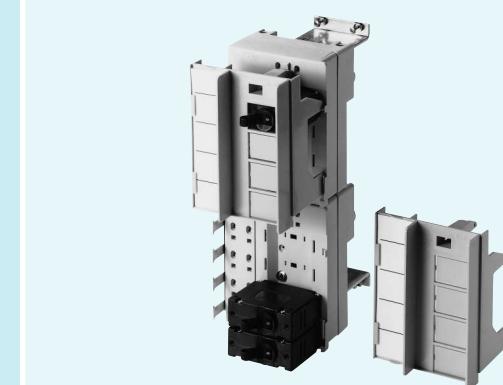

Expansion or circuit breaker replacement is possible with power on.

Typical applications

Telecommunications, measuring and control systems.

Technical data

Voltage rating	3 AC 415 V; AC 240 V 50/60 Hz DC 80 V	
Current rating range	0.1... 60 A multi pole 0.1...100 A single pole	
Auxiliary circuit	6 A, AC 240 V/DC 28 V 1 A, DC 65 V; 0.5A, DC 80 V	
Typical life	6,000 operations at I_N	
Ambient temperature	-40...+85°C	
Insulation co-ordination (IEC 664 and 664A)	Rated impulse withstand voltage 2.5 kV	Pollution degree 2 reinforced insulation in operating area
Dielectric strength (IEC 664 and 664A)	Test voltage AC 3000 V AC 1500 V	
operating area	pole to pole	
main to auxiliary circuit	AC 1500 V	
switching to trip circuit	AC 1500 V	
Insulation resistance	> 100 MΩ (DC 500 V)	
Interrupting capacity I_{cn} EN 60934, PC 1		
UL 1077	5000 A at AC 240/415 V, DC 80 V	
Degree of protection (IEC 529/DIN 40050)	operating area IP 40; terminal area IP 00	
Vibration	10 g (10-500 Hz) \pm 0.76 mm (10-57) to IEC 68-2-6, Test Fc, 10 frequency cycles/axis	
Shock	100 g (6 ms half-sine) to IEC 68-2-27, Test Ea	
Corrosion	96 hours at 5 % salt mist, to IEC 68-2-11, Test Ka	
Humidity	240 hours at 95 % RH, to IEC 68-2-3, Test Ca	
Mass	approx. 65...100 g per pole (depending on version)	

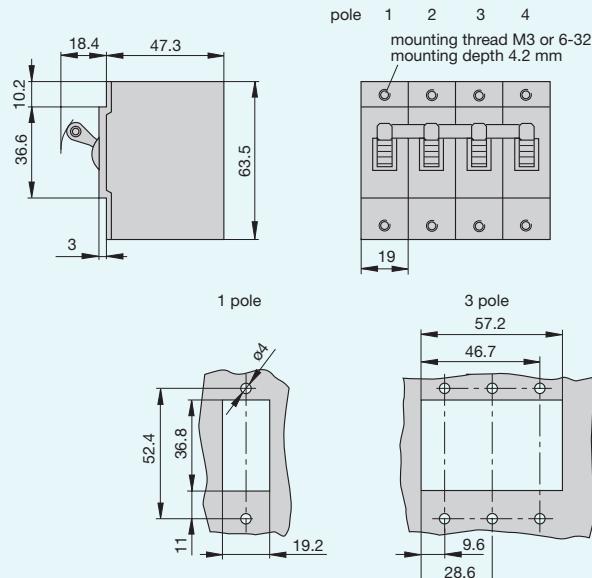

Ordering information

Type No.	8350 circuit breaker with toggle actuator							
Mounting	A* flange mounting, with rectangular aperture, standard toggle C flange mounting, round aperture, standard toggle D threadneck mounting, paddle, $I_N \leq 30$ A only, max. 3 poles H rail mounting, $I_N \leq 25$ A only							
Configuration	A* metric, no interphase barrier B metric M3, with interphase barrier (small) C imperial 6-32, no interphase barrier D imperial 6-32, with interphase barrier (small)							
Number of poles	1* single pole 2* two pole 3* three pole 4 four pole							
Colour of front face	B* black							
Terminal design	A* stud terminal, M5 or 10-32 (≤ 60 A) B clamp terminal, M4 or 8-32 (≤ 30 A) C rear push-on terminal (≤ 25 A) M* stud terminal, M6 or 1/4-20 (standard for >60 A) Y stud terminal, M6 or 1/4-20 one tooth washer and one hex nut per terminal							
Actuator configuration	A* 1 toggle per pole (mounting A and C) G reduced number of toggles per unit (mounting A and C) J 1 paddle per unit (mounting D) K 1 baton							
Characteristic curve	AS long delay BS* medium delay CS short delay OO switch only							
Actuator colour and marking details	C white I-0 D black I-0 N white on-off P black on-off 2* white no marking 3* black no marking							
Not used	0*							
Auxiliary contacts	A* no auxiliary contacts B one change over F trip alarm (on request) H one change over contact in the last pole (for multipole version) L signal contact in last pole (multipole versions only)							
Internal circuit	A switch B* series trip D relay trip J dual control, 4 terminals (≤ 60 A)							
Remote trip	(internal circuit D or J only) current ratings upon request							
0* no remote trip								
1 DC 24 V								
4 AC 120 V								
5 AC 230 V								
Frequency	A* AC 50/60 Hz D* DC							
Current rating	0.1... 60 A (multi pole) 0.1...100 A (single pole)

B - Series trip with auxiliary contacts

J - Dual control

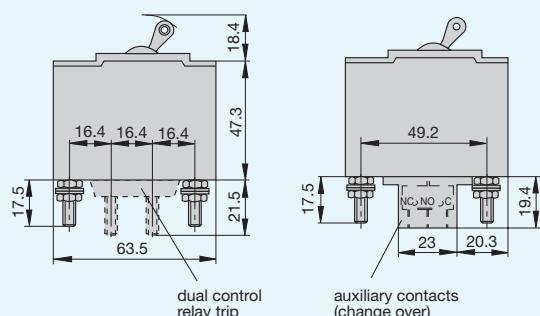

D - Relay trip

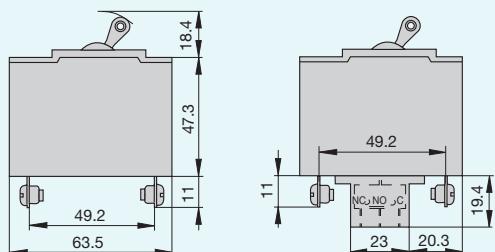

Terminal design / Dimensions

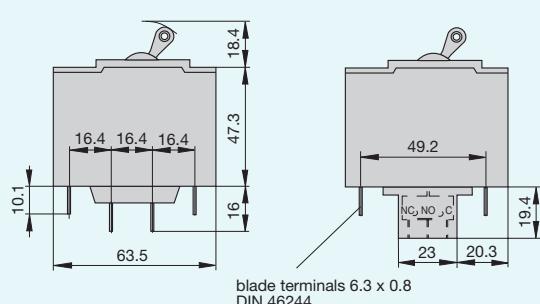

A/M stud terminals

B clamp terminals ($I_N \leq 30$ A)

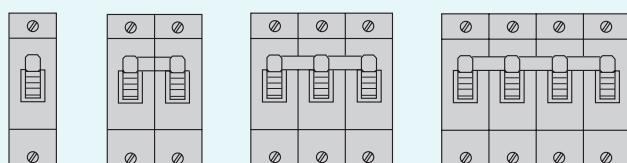

C rear push-on terminals ($I_N \leq 25$ A)

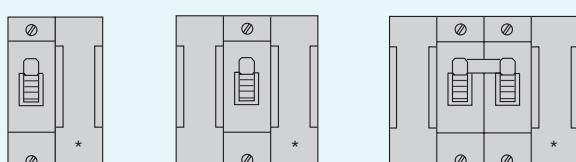

Actuator configuration

A 1 toggle per pole

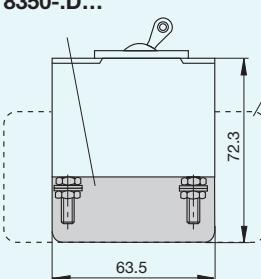

G reduced number of toggles per unit

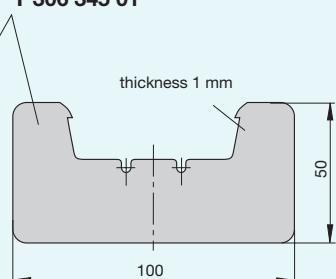

* Denotes microswitch pole on multipole units.

Interphase barriers / Dimensions

Interphase barrier (small) 8350-B... 8350-D...

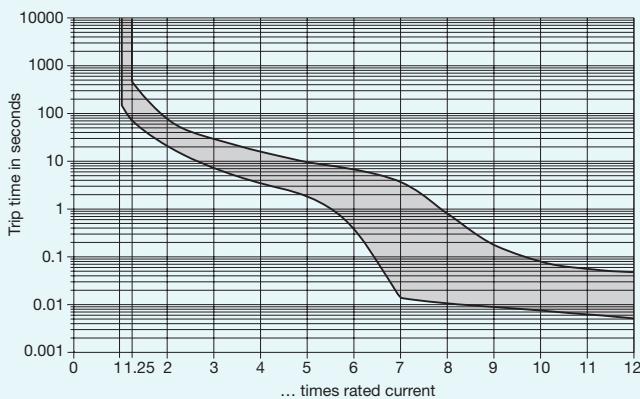

Interphase barrier (large) for snap on Y 306 345 01

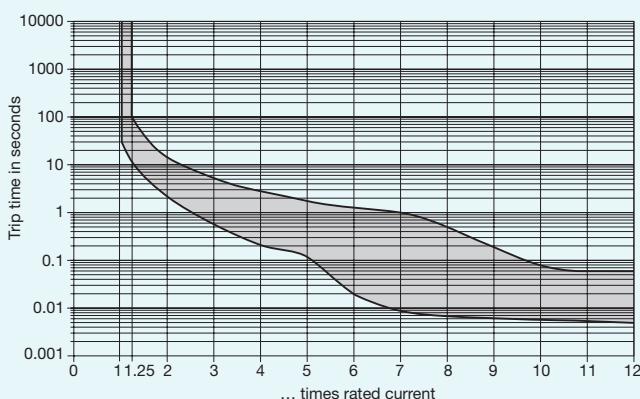

Typical time/current characteristics

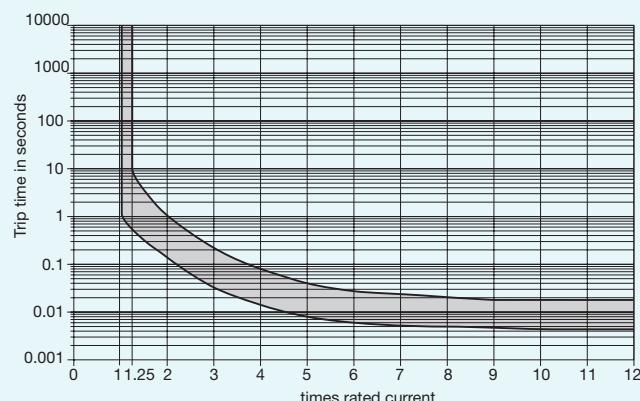

Curve AS - long delay
for AC 50/60 Hz, DC
at ambient temperature +23 °C

Curve BS - medium delay
for AC 50/60 Hz, DC
at ambient temperature +23 °C

Curve CS - short delay
for AC 50/60 Hz, DC
at ambient temperature +23 °C

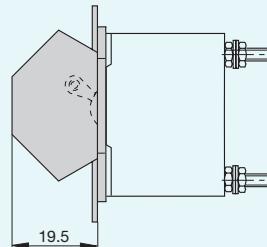

Series 8350 with characteristics AS, BS and CS will not trip at a halfsine wave of 10 ms and an amplitude of ≤ 8 times rated current.

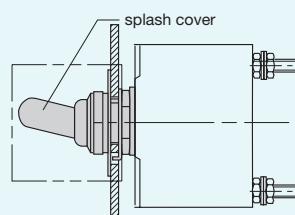

The tripping characteristics as outlined in this catalogue will only be maintained if the escutcheon is mounted on a vertical surface.

Single and multi pole high performance circuit breakers (CBEs) and battery isolation switches with and without remote control

Voltage ratings max. 3 AC 660 V, AC 250 V, DC 220 V

Current ratings 0.05...500 A

E-T-A high performance circuit breakers, of thermal or thermal magnetic operation, have been designed for applications with uncompromising performance and reliability requirements.

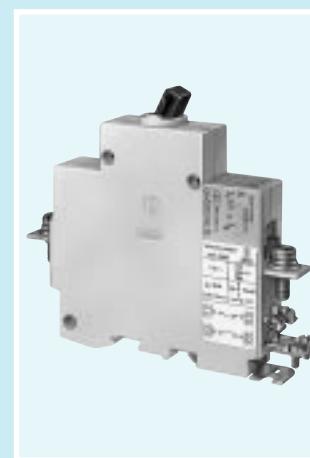

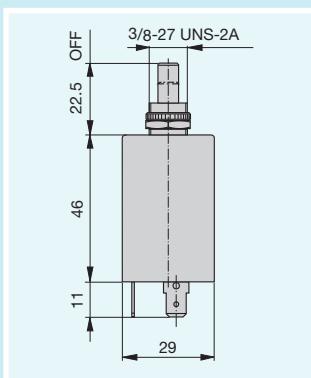

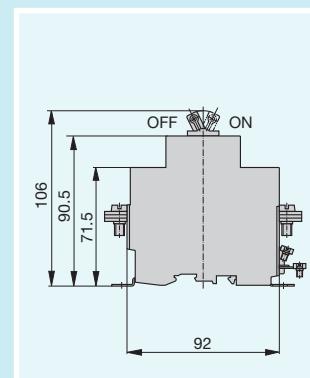

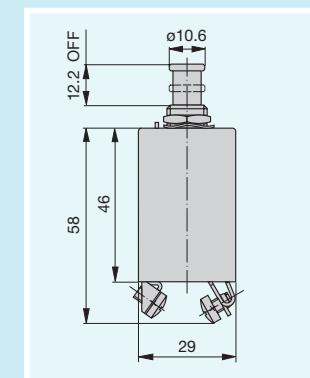

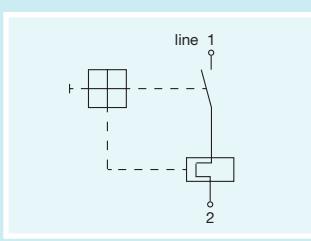

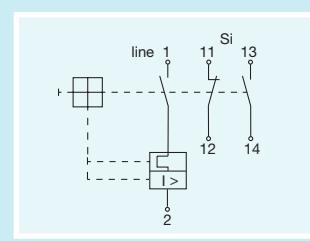

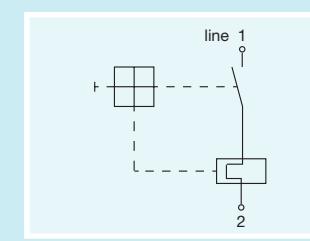

Models are available for aircraft, defence equipment, marine systems and other specialised equipment where safety is paramount.

All the circuit breakers in this catalogue section are highly resistant to the effects of shock, vibration, salt spray, humidity and similar influences. Their small physical size, low mass and advanced construction guarantee total versatility. Approvals are held from the supervisory authorities of key relevant industries. For example, E-T-A aircraft circuit breakers have been qualified for use in some of the world's most advanced aircraft, fixed wing and helicopter.

Accessories include panel seals providing various levels of protection for E-T-A single-hole panel mount models, from splash proofing right up to full immersion.

Complementing these high performance products, E-T-A battery isolation switches with remote control capability are especially suited to installation in the main battery systems of heavy duty vehicles - including tankers, boats, off-road plant and other battery powered equipment. Remote disconnection offers the dual benefits of user convenience and safety.

All dimensions without tolerances are for reference only. In the interest of improved design, performance and cost effectiveness the right to make changes in these specifications without notice is reserved. Product markings may not be exactly as the ordering codes.

Description

Single pole high performance version of type 2-5700 (section 1) thermal circuit breaker, with push-to-reset tease free, trip-free, snap action mechanism (R-type TO CBE to EN 60 934). Designed for threadneck panel mounting and for applications with a high fault current switching requirement.

Typical applications

Extra low voltage systems, industrial equipment.

402-...

Accessories

X 200 799 02	Water splash cover/knurled nut assembly.
X 200 799 01	As above with the cover bonded to the nut for extra retention.
X 200 798 01/02	As X 200 799 02 and 01 above but featuring a slotted knurled ring for wrench front of panel tightening.
X 210 739 01	Water splash cover/hex nut. The concertina design is extended when the button trips to the OFF position.

Standard current ratings and typical internal resistance values

Current rating (A)	Internal resistance (Ω)	Current rating (A)	Internal resistance (Ω)
8	< 0.02	14	< 0.02
10	< 0.02	15	< 0.02
12	< 0.02	16	< 0.02

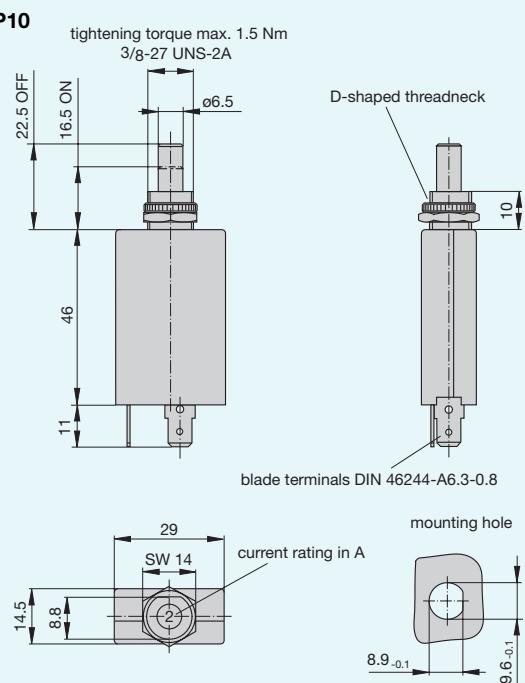

Technical data

Voltage rating	AC 250 V; DC 28 V	
Current rating range	8...16 A (20...25 A to special order)	
Typical life	4,000 operations at $2 \times I_N$	
Ambient temperature	-30...+60 °C	
Insulation co-ordination (IEC 664 and 664A)	Rated impulse withstand voltage 2.5 kV	Pollution degree 2 (threadneck should be earthed/grounded)
Dielectric strength (IEC 664 and 664A) operating area	Test voltage AC 2000 V	
Insulation resistance	> 100 MΩ (DC 500 V)	
Interrupting capacity I_{cn}	1000 A	
Degree of protection (IEC 529/DIN 40050)	operating area IP 40 terminal area IP 00	
Vibration	8 g (57-500 Hz) ±0.61 mm (10-57 Hz) to IEC 68-2-6, Test Fc 10 frequency cycles/axis	
Shock	40 g (11 ms) to IEC 68-27, Test Ea	
Corrosion	48 hours at 5 % salt mist, to IEC 68-2-11, Test Ka	
Humidity	240 hours at 95 % RH to IEC 68-2-3, test Ca	
Mass	approx. 35 g

Internal connection diagram

Description

Single, double and three pole high performance thermal-magnetic circuit breakers with tease-free, trip-free, snap action mechanism and toggle actuation (S-type TM CBE to EN 60 934; also to EN 60 947). Designed for rail, panel or surface mounting. Available with a choice of characteristic curves and optional auxiliary contacts.

Typical applications

Motors, generators, transformers, thyristor and silicon rectifiers.

Accessories

- X 211 118 01 Single pole splashcover with fixing plate.
- X 211 119 01 Two pole splashcover with fixing plate.
- X 211 705 01 Terminal insulation cover for use with types 410, 520 and 530 - two per pole required.

Interrupting capacity to IEC 947/EN 60947

AC voltage

Number of poles	Voltage rating	Interrupting capacity $I_N = 12\text{--}125\text{A}$	Power factor	Interrupting capacity $I_N = 7\text{+}10\text{A}$	Power factor
1	AC 240 V	5,000 A	$\cos\phi = 0.7$	3,500 A	$\cos\phi = 0.8$
2	AC 240 V	8,000 A	$\cos\phi = 0.7$	6,000 A	$\cos\phi = 0.7$
3	3 AC 415 V	5,000 A	$\cos\phi = 0.7$	3,000 A	$\cos\phi = 0.85$
3	3 AC 500 V	4,000 A	$\cos\phi = 0.8$	2,500 A	$\cos\phi = 0.85$

ETA® High Performance Thermal Circuit Breaker 412-...

Description

Single pole high performance thermal circuit breaker with tease-free, trip-free, snap action mechanism and push/pull on/off manual actuation (M-type TO CBE to EN 60934). An indicator band on the push button shows clearly the tripped/off position. Threadneck panel mounted and available in tracked vehicle, aircraft and general purpose versions.

Typical applications

Extra low voltage wiring systems on all types of vehicles for land, sea and air; defence equipment; battery powered machines.

Description

Single pole high performance version of type 3200 (section 2) thermal-magnetic circuit breaker with tease-free, trip-free, snap action mechanism and additional manual release (M-type TM CBE to EN 60934). Designed for plug-in mounting with E-T-A sockets 10R or 16. Available with optional silver plated terminal pins for use in corrosive environments.

Complies with CBE standard EN 60934 (IEC 934).

Typical applications

Extra low voltage systems, control equipment.

428-...

Accessories

10R-K10	Modular snap-together surface mounted sockets, each accommodating two plug-in circuit breakers. With screw terminals.
10R-P10	As above but with push-on terminals.

Description

Single pole high performance versions of types 3300 and 3400 (section 2) thermal-magnetic circuit breakers with tease-free, trip-free, press-to-reset, snap action mechanism (R-type TM CBE to EN 60934; M-type with manual release -H). Available with fast acting and standard magnetic tripping characteristics - types 433 and 434 - both with threadneck panel mounting. Options include a separate shunt tap terminal (-A3), and pull-to-trip manual release (-H). Complies with CBE standard EN 60934 (IEC 934).

Typical applications

Industrial equipment, control systems, power supplies.

Time/current characteristics are calibrated at 23°C (see page 8). For operation at other temperatures please apply the factors below to determine the circuit breaker rating required.

Ambient temperature °C	-20	-10	0	+23	+40	+50	+60
Multiplication factor	0.76	0.84	0.92	1	1.08	1.16	1.24

N.B.

Magnetic tripping currents are increased by 20% on DC supplies.

Accessories

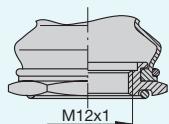

For push buttons with moulded threadneck M12 (-IG2)
(not with manual release -H)

Splash cover black with hex nut assembly

X 201 296 01 without O-ring (IP 64)

Splash cover translucent with nickel-plated hex nut

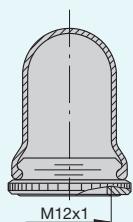

X 200 801 08 with O ring (IP 66)

Splash cover (translucent)

with knurled nut assembly

X 210 663 01 (IP 64)

Description

Single pole high performance thermal magnetic circuit breaker with toggle actuation (S-type TM CBE to EN 60934). Options include auxiliary contacts, a moulded flame retardant enclosure for added environmental protection, and remote operation - disconnection only, or disconnection and re-connection.

Typical applications

Battery and cable protection for all types of vehicles (including electric), battery powered systems.

Ordering information

Type No.	437	single pole, toggle actuator
Enclosure design (optional)		
B3	moulded, high environmental protection degree, without operating knob	
B31	moulded, high environmental protection degree, with operating knob	
B35	as B31, but for remote disconnection and re-connection facility	
Terminal design		
K12	flat screw terminals M10, for enclosure B3, B31 or B35	
K60	flat screw terminals DIN 46 206, form A, thread M10	
Mounting

Description

Single pole thermal-magnetic circuit breakers with tease-free, trip-free, press-to-reset snap action mechanism and special dual button manual release which avoids the danger of unintended disconnection (M-type TM CBE to EN 60934). Surface mounted, compact design available with fast acting, standard and delayed switching characteristics. Options include auxiliary contact and remote electrical disconnection.

Typical applications

Heavy duty vehicles, battery systems, defence equipment.

Internal wiring diagrams

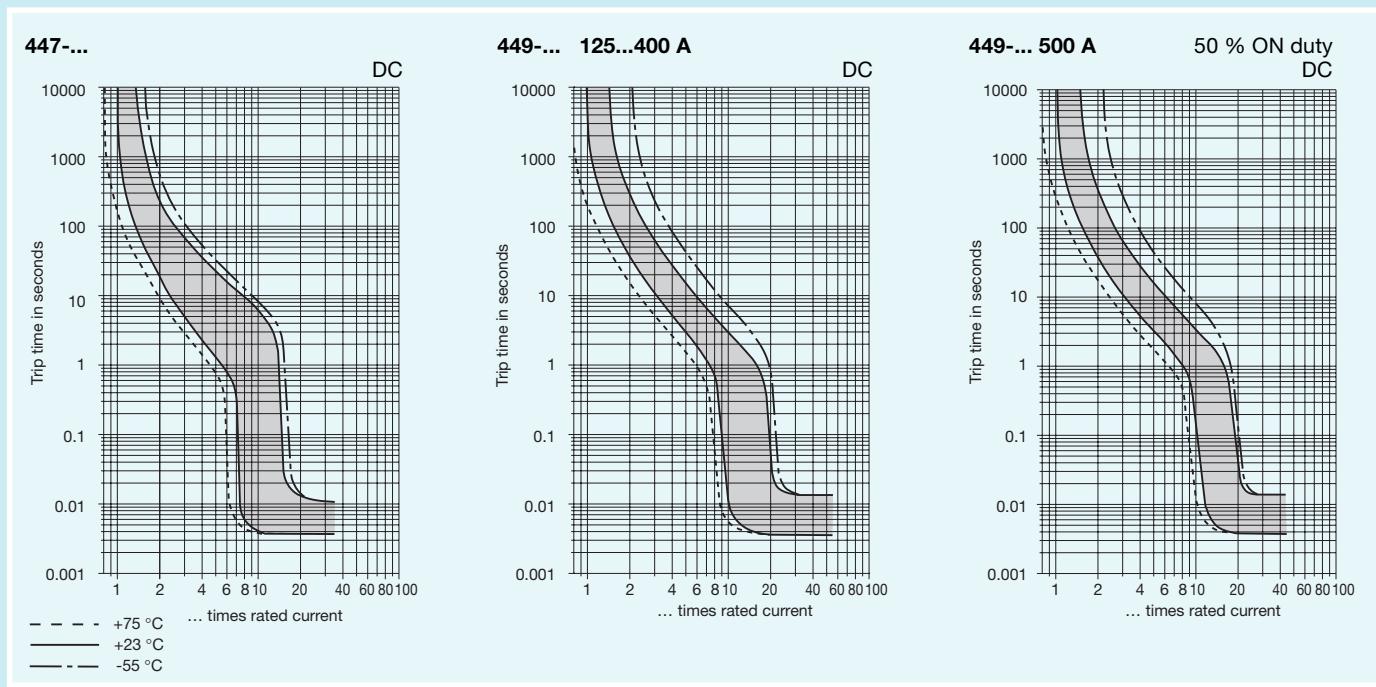

Typical time/current characteristics of type 446-...

Circuit breakers with remote disconnection facility will trip 10 % faster.

Typical time/current characteristics

Description

Single pole high performance thermal-magnetic circuit breaker, with tease-free, trip-free, snap action mechanism and push/pull on/off actuation (M-type TM CBE to EN 60934). An indicator band on the push button shows clearly the tripped/off position. Threadneck panel mounted in tracked vehicle and aircraft/general purpose versions, with optional fast acting magnetic characteristics.

Typical applications

Extra low voltage wiring systems on all types of vehicle for land, sea and air; defence equipment; battery powered machines.

Description

Single pole, miniaturised, aircraft style thermal circuit breaker with tease-free, trip-free, snap action mechanism and push/pull on/off manual actuation (M-type TO CBE to EN 60934). An indicator band on the push button shows clearly the tripped/off position. Threadneck panel mounted, available in metric and US (MS 3320) configurations. Advanced two-chamber design contributes to fail-safe operation. Temperature compensated from -55° to +125°C, with optional auxiliary contacts, and fully approved for use on a wide range of aircraft and equipment. Full military specification ensures suitability for the most demanding applications. For three pole version see type 583.

Typical applications

Aircraft systems and equipment (fixed wing and helicopters); other extra low voltage wiring applications; defence equipment; communications systems.

Accessories

Description

Single pole, miniaturised thermal circuit breaker with snap action mechanism and push/pull on/off manual actuation (M-type TO CBE to EN 60934). Threadneck panel mounted, temperature-compensated, with optional auxiliary contacts. Fully approved for commercial aircraft and similar requirements.

Typical applications

Extra low voltage wiring systems on all types of vehicles for land, sea and air.

Accessories

- X 200 801 08 Water splash cover/hex nut assembly. The concertina design is extended when the button trips to the OFF position. Plated finish.
- X 200 801 03 As above but blackened finish.
- X 200 803 01 Screw-tightened clamp-on actuator extension to aid manual operation.

Description

Single pole high performance version of type 201 (catalogue section 2) thermal-magnetic circuit breaker with tease-free, trip-free, snap action mechanism and two button operation (M-type TM CBE to EN 60934). Standard EN rail mounting, recessed terminals and enhanced short circuit performance.

Complies with CBE standard EN 60934 (IEC 934).

Typical applications

Control systems, industrial equipment.

Typical time/current characteristics

N.B.

Magnetic tripping currents are increased by 20% on DC supplies.

Time/current characteristics are calibrated at 23°C (see page 8). For operation at other temperatures please apply the factors below to determine the circuit breaker rating required.

Ambient temperature °C	-20	-10	0	+23	+40	+50	+60
Multiplication factor	0.76	0.84	0.92	1	1.08	1.16	1.24

Description

Three pole, miniaturised, aircraft style thermal circuit breaker with tease-free, trip-free, snap action mechanism and push/pull on/off manual actuation (M-type TO CBE to EN 60934). An indicator band on the push button shows clearly the tripped/off position. Threadneck panel mounted, available in metric and US (MS 14154) configurations. Advanced two-chamber design minimises contact contamination to provide fail-safe operation. Temperature compensated with optional auxiliary contacts, and fully approved for use on a wide range of aircraft and equipment. For single pole version see type 483.

583-...

with auxiliary contact

without auxiliary contact

Typical applications

Aircraft systems and equipment (fixed wing and helicopters); other extra low voltage wiring applications; defence equipment; communications systems.

Accessories

X 200 801 08	Water splash cover/hex nut assembly. The concertina design is extended when the button trips to the OFF position. Plated finish.
X 200 801 03	As above but blackened finish.
X 200 801 09	As above, but hex nut 7/16-32, black finish
X 200 802 01	Splash seal/hex nut assembly, allowing full visibility of the push button actuator. Plated finish.

X 200 801 08 nickel plated nut M12x1, translucent cover
 X 200 801 03 matt black finish nut M12x1, black cover
 X 200 801 09 matt black finish nut 7/16-32, black cover

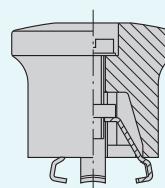

Splash cover black/hex nut assembly with O ring (IP 54)

X 200 802 01 nickel plated nut
 X 200 802 02 matt black finish nut

Actuator extension (black)

X 200 803 01

Description

Single, two, three and four pole isolators to EN 60947 / IEC 947 with toggle actuation. Designed for rail, panel or surface mounting. Options include auxiliary contacts and remote electrical disconnection. For circuit breaker versions see types 410, 520, 530.

Typical applications

Control systems, industrial equipment.

Accessories

- X 211 118 01 Single pole splash cover with fixing plate.
X 211 119 01 Two pole splash cover with fixing plate.
X 211 705 01 Terminal insulation cover for use with types 410, 520 and 530 - two per pole required.

E-T-A® Battery Isolation Switches 921/922

Description

Single or two pole isolation switches to EN 60947 with toggle actuation. Options include auxiliary contacts, a moulded flame retardant enclosure for added environmental protection (with or without rotary action external operating knob), and remote operation - disconnection only, or disconnection and re-connection. A version for use in hazardous areas (e.g. petroleum and chemical tankers) is available to special order.

Typical applications

Vehicles of all types (including tankers), boats, battery powered systems.

E-T-A® Battery Emergency Switch E-1032-...

Description

For vehicles carrying dangerous goods the European guideline ADR (European agreement concerning the international carriage of dangerous goods by road) requires that a Battery Emergency Switch should be fitted between the battery and the vehicle electrical system which in an emergency can be operated from the driver's cab. Once the emergency has been remedied or if the switch was operated by error, the switch must also be resettable from the driver's cab.

Typical applications

Commercial vehicles carrying dangerous goods

Die Anlagen zu diesem Prüfungsschein (Unterlagen zu 1. und 2.) wurden zur Festlegung der Bauart und der Ausführung mit dem Dienstsiegel der Physikalisch-Technischen Bundesanstalt versehen.	
Beurteilung	
Der Steuerstromkreis der Begrenzerschaltung Typ 1081-01 entspricht in seiner Bauart den Bestimmungen VDE 0171/1.69; er ist ohne Einschränkung durch eine Explosionsklasse oder Zündgruppe zum Einsatz in explosionsgefährdeten Betriebsstätten geeignet.	
Da nur der Steuerstromkreis eigensicher ist, muß die Begrenzerschaltung außerhalb des explosionsgefährdeten Bereiches errichtet werden.	
Für die Errichtung des eigensicheren Steuerstromkreises sind die Bestimmungen VDE 0165 zu beachten (z.B. Einhaltung der Höchstwerte von Induktivität und Kapazität).	
Weiterhin ist bei der Errichtung des eigensicheren Steuerstromkreises zu beachten, daß die Grenztemperatur der jeweiligen Zündgruppe stets auch unter Berücksichtigung der Eigenerwärmung der angeschlossenen Betriebsmittel infolge Stromwärme nicht überschritten werden darf.	
Dieser Prüfungsschein gilt für jede Begrenzerschaltung des genannten Typs, für die eine Stückprüfung gemäß VDE 0171 erfolgreich durchgeführt worden ist.	
Physikalisch-Technische Bundesanstalt Im Auftrag  (Dr.-Ing. Scheba Oberregierungsrat)	
Braunschweig, 17.8.1981	

Description

Single pole circuit breaker type 437 or single/two pole isolation switches types 921/922 featuring an additional electronic function module which limits the duration of the supply to the remote disconnect and reconnect coils, avoiding damage in the event of unusual operating circumstances. Available with undervoltage monitoring option to protect batteries from the effects of deep discharge, status output for undervoltage, auto reset feature.

Typical applications

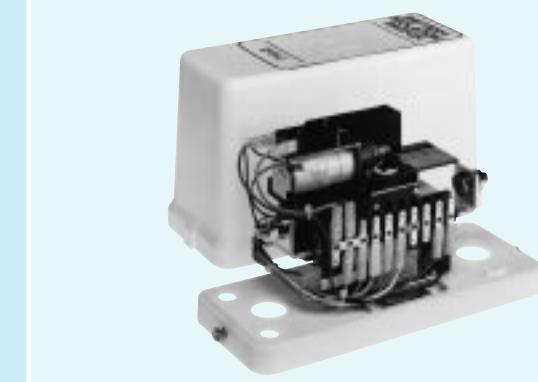

Battery and cable protection for all types of vehicle (including electric), battery powered systems.

Technical data – Electronic module

Voltage rating	DC 12 V	DC 24 V
Voltage rating range	ON 10.3 - 16 V OFF 9 - 16 V	18 - 32 V 16 - 32 V
Correct switching performance is not guaranteed if the voltage falls below the minimum value.		
Temperature range	electronic control unit -40...+ 80 °C	
Operating current	ON approx. 30 A OFF approx. 10 A	approx. 15 A approx. 20 A
Excitation time	ON typically 100 ms OFF typically 20 ms	
Switching frequency	0.1 Hz max.	
Power consumption	of electronic control unit typically < 1 mA (when switched off or button operated)	
Control inputs	E-1073-1..: 'E/A'(ON/OFF), 'U-AUS' (undervoltage protection OFF), 'A-W' (auto reset) E-1073-2..: 'T-EIN', (button ON) 'T-AUS', (button OFF)	
Voltage	max. 32 V ON (high) > 8 V OFF (low) < 3 V	
Power consumption	typically 1 mA typically 5 mA	
EMC	according to DIN 40839/ISO 7637	
Reverse polarity	protection If polarized incorrectly, the Battery Isolation Switch will operate immediately. The circuit breaker will trip after a few seconds.	
Undervoltage protection	switching thresholds 11.0 V ±0.2 V hysteresis typically 0.5 V	22.8 V ±0.2 V trip time typically 40 sec
Undervoltage status output('UST'), optional with E-1073-1..	minus switching current load corresponding to 2 W lamp load, short-circuit proof	
Automatic reset ('A-W'), optional with E-1073-1.., with series 921/922 only	Reset after mechanical disconnection is provided by the integral electronic control after approx. 100 ms.	
Control current supply ('+US2'), with E-1073-2.. for T-EIN/T-AUS	May be connected to 20 control inputs. Noise-voltage proof, short-circuit proof	
Terminals	control terminals	blade terminals 6.3x0.8 mm
Mass, with circuit breaker or isolation switch	approx. 2,000 g without enclosure approx. 2,500 g with enclosure	

Technical data of switch or circuit breaker

see types 437, 921 or 922

Features

- Multiple functions in one unit
 - High performance circuit breaker providing battery and cable protection from overloads and short-circuits.
 - Master switch for ON/OFF operation
 - Electrical remote control
 - Undervoltage protection with status output
 - Auxiliary contacts (e.g. for generator disconnection)
 - Active reverse polarity protection of the entire vehicle electrical system
- Current ratings to 240 A
- Closed-circuit current consumption < 1 mA

Technical description

E-T-A circuit breaker/battery isolation switches combined with electronic control unit E-1073 will meet a wide range of requirements.

Circuit breaker/Battery Isolation switches

The main switching contacts will open the plus, the minus or both poles according to model and application.

● Series E-1073-....437

Single pole thermal-magnetic circuit breaker for current ratings up to 240 A, to protect the vehicle electrical system from overloads and short circuits.

● Series E-1073-....921

Single pole battery isolation switch for current ratings up to 240 A.

● Series E-1073-....922

Double pole battery isolation switch for current ratings up to 120 A.

Electronic control unit

An electronic control unit enables the basic on/off function and two additional functions. The system voltage is connected across terminals +UB/-UB to provide the supply to the control unit and a feed is taken from +US1 for the remotely sited operating switch(es). The quiescent current drain is typically less than 1 mA, with a short duration excursion during excitation of the ON/OFF coils.

4

Basic function

Switch ON/OFF

Operation of the ON control switch will energise the switch-on coil for approximately 100 ms causing the main switching contacts to latch closed. Operation of the OFF control switch will cause the disconnect coil to trigger the release of the switching mechanism within approximately 20 ms. Both coil circuits are current limited to prevent damage through overheating.

Manual operation

An optional external operating knob is available to provide manual control in addition to electrical ON/OFF operation.

Reverse polarity protection

In the event of reverse polarity connection, the electronic control unit will immediately operate the battery switch to isolate the entire electrical system. The circuit breaker will trip after a short delay to protect the operating coils and must be re-set once the fault has been corrected.

Control functions

Type 1 E-1073-.1.. with ON/OFF switch

ON/OFF control switch input ("E/A")

The battery isolation switch can be operated on or off by an external control switch to plus.

Undervoltage protection (optional)

This optional feature protects the battery from deep discharge should electrical loads be left on.

The battery is automatically disconnected whenever the voltage falls below a critical value for more than 40 s. The unit is reset by operation of the control switch. Sustained undervoltage after reconnection causes the unit to disconnect again after approx. 40 s.

Overriding the undervoltage protection ("U-AUS")

Undervoltage protection may be overridden if required by connecting control output "U-AUS" to plus terminal or terminal 15.

Undervoltage status output ("UST")

Undervoltage is signalled immediately via the minus-switching, short-circuit proof transistor output (2 W lamp load).

Auto reset ("A-W"), optional with series 921 and 922

Immediate reset after unwanted mechanical disconnection (e.g. upon excessive vibration) is provided by the integral electronic control.

Type 2 E-1073-.2... with ON/OFF button

ON/OFF control inputs ("T-ON/T-OFF")

ON/OFF function is provided by two external switches with a central control function, i.e. several systems can be operated simultaneously.

Additional control current supply ("+US2")

If several circuit breakers/battery isolation switches are operated in parallel, switches can be supplied with control current from any of the electronic control units available. This power source is short-circuit proof, protected from noise voltages and will operate for 20 inputs.

Additional control input "ON/OFF Test" ("E/A")

This control input can be used for maintenance purposes. The battery isolation switch is switched on when plus voltage is applied, and switched off when plus voltage is removed.

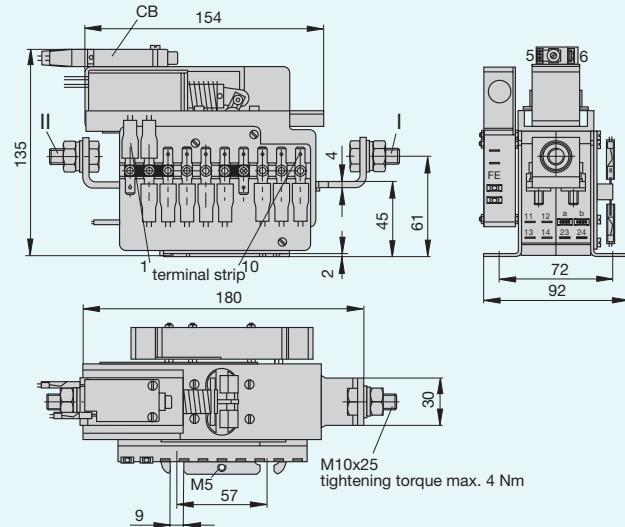

Note

The circuit breaker should be in the OFF condition when connecting or replacing the battery.

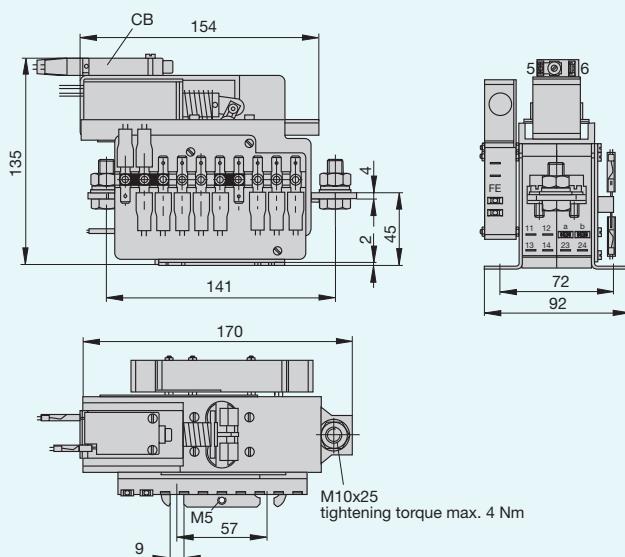

Observe Instructions for Installation TM 9/9.3 D/E!

Connection diagrams

E-1073-1...-437/-921/-922 control function for ON/OFF switch

E-1073-2...-437/-921/-922 control function for ON/OFF switch

Typical applications

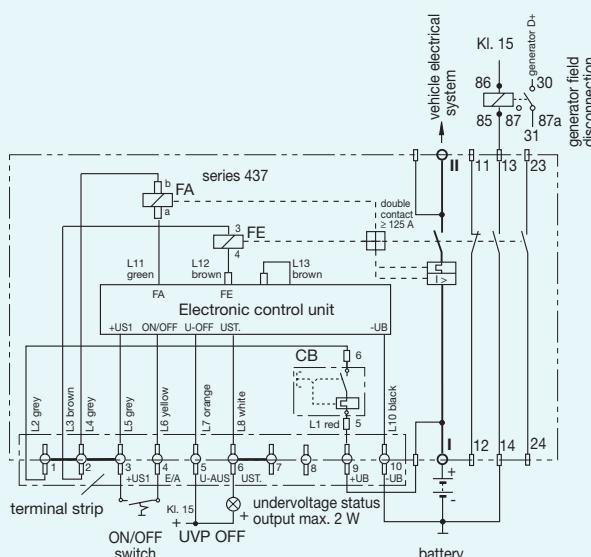

For road vehicles, e.g. buses and coaches

Series E-1073-1102-437-B3-K12-07-Si01-240 A

In this application, the E-T-A combined battery switch/circuit breaker has several functions:

- High performance circuit breaker rated at 40 A, providing battery and cable protection from overloads and short circuits.
- Isolation switch, for ON/OFF operation (e.g. for main system disconnection).
- Remote control via external, low-current circuit.
- Undervoltage protection from battery deep discharge should electrical loads be left on.
- Early under voltage signalisation via a warning lamp (undervoltage status output), located as required.
- Undervoltage operation can be overridden if required.
- Auxiliary contact to disconnect the generator field.
- Reverse polarity protection through immediate disconnection of the entire vehicle electrical system if the battery is incorrectly connected.

These functions allow the number of components and cables required to be reduced, with significant space and weight saving benefits.

For rail vehicles, e.g. underground carriages

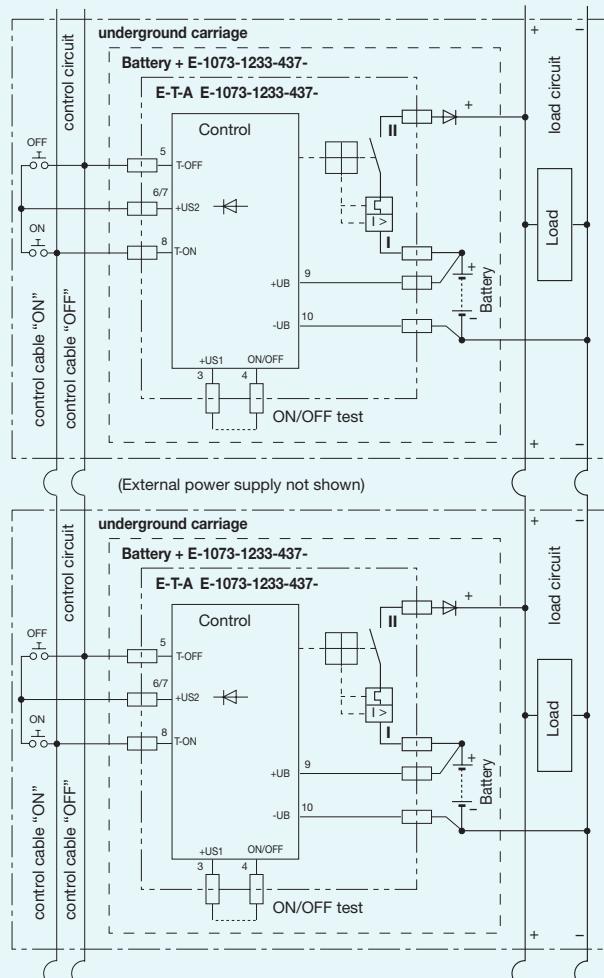

Series E-1073-1233-437-K60-06-Si01-200 A

In this application, the E-T-A combined battery switch/circuit breaker has two functions:

- High performance circuit breaker providing battery and cable protection from overloads and short circuits.
- Isolation switch between battery and loads.

In this application, an ON/OFF remote control switch can be provided in both the first and last carriages. This will enable all batteries to be disconnected from the power distribution system by the operation of one control, irrespective of its location. In the same way, all batteries can be re-connected by the operation of a single control switch.

This is extremely helpful during coupling/de-coupling of carriages for example. In addition the E/A test input permits the operation of individual battery switch/circuit breakers during maintenance.

E-T-A® Remote Control Circuit Breaker 4910 (RCCB)

Description

Single pole remote control circuit breaker (RCCB), temperature compensated, either with or without auxiliary contacts, and featuring a bimetal actuator which trips the circuit breaker mechanism within a specified time under overcurrent conditions. The switching contact latching system is operated by a bi-stable linear motor controlled by electronic circuitry incorporated within the device. Applying the system voltage across the input will switch the RCCB ON, disconnection of the input will cause it to switch OFF. Remote control is achieved through the use of a conventional single pole manually operated aircraft style thermal circuit breaker to connect the supply to the control input of the RCCB. Complies with the requirements of MIL-C-83383.

4910 (RCCB)

Typical applications

Aircraft electrical systems and equipment, and other high performance applications.

Current ratings 0.1...16 A

**Door Locking Relays**

E-T-A door locking relays are designed to increase the safety of washing machines, dishwashers, microwave ovens and similar appliances. By ensuring that their doors cannot be opened whilst the machine is operating, users are protected from moving parts, high temperatures, steam, harmful radiation and other hazards.

Suited both to domestic and heavy duty professional equipment, these relays offer a choice of thermal or magnetic sensing element, with versions for current and voltage control.

Energising the relay activates the door locking mechanism, while de-energisation keeps the door locked for a pre-determined time until it is safe to be opened again.

The E-T-A door locking relay series 6510 has been specifically developed to comply with the requirements of IEC 335-2-25 (Safety for Household and Similar appliances). The product is in modular form and offers door closed signalling and locking possibilities for applications such as microwave ovens with pyrolytic cleaning.

The choice of door locking relays available provides flexibility for the designer while ensuring that the legislative demands of different markets can be successfully satisfied.

Time Delay Relays

The E-T-A series 664 is a voltage activated thermal time delay relay suitable for a wide range of applications and process control applications. The excitation circuit and load switching changeover contacts are electrically separate. Delay times can be specified in fixed steps up to sixty seconds.

Motor Protection Controls

Series 2-6500 and 2-6700 over current protection devices with automatic reset actuation are particularly suitable for motor control and similar applications. They are designed to distinguish between temporary overloads, for example motor start conditions, and sustained faults such as locked rotor. A reset delay provides an opportunity for the equipment protected to cool before power is re-applied, and the need for operator intervention is avoided.

Motor Start Switches

E-T-A Motor Start Switches offer a simple and rugged method of disconnecting the auxiliary windings and start capacitors of single phase AC motors. Featuring current sensitive bimetal controlled mechanisms, their switching time is a function of the starting current and its duration.

All dimensions without tolerances are for reference only. In the interest of improved design, performance and cost effectiveness the right to make changes in these specifications without notice is reserved. Product markings may not be exactly as the ordering codes.

Internal wiring diagrams

Description

Voltage activated bimetal operated time delay relay with changeover contact and snap action mechanism, excitation circuit and switching circuit electrically separate, operation independent of mounting attitude. High shock resistance. Delay times can be factory-preset as desired. The continuous excitation voltage may be up to 1.4 times the rated value. To shorten the switching time the excitation voltage may be increased to 3 times the rated value but only for that switching time period.

Typical applications

Process control, diesel engine pre-heaters

E-T-A® Motor Start Switch 2-7000-...

Description

Bimetal operated current sensitive relay for disconnection of auxiliary windings and start capacitors of single phase AC motors. The operating time of the auxiliary winding is a function of the starting current and its duration. High contact pressure reduces sensitivity to shock and vibration - no contact sticking.

Other features: independent of mounting position and location. Under stalled motor conditions the auxiliary winding and/or the starting capacitor will remain disconnected avoiding damage to the motor. See page 281 for additional information.

Typical applications

Single phase AC motors

Internal wiring diagram

Typical time/current characteristics at 23 °C

Selection of the device

The contacts of type 2-7000 will open when energized so that the lowest possible motor current (e.g. the running current of the motor unloaded) must not be less than the current rating of the motor start switch to ensure that the switch will reconnect the auxiliary phase after completion of the starting process.

The current rating will determine both the switching characteristics and ratings of the contacts.

At the same time the highest possible motor current (short-circuit current at overvoltage) must not exceed 6 times the motor start switch current rating. Normally the A-P-S current rating should be approx. 1/5 of the running current of the motor (see the examples below).

Either wiring a or wiring b should be chosen, giving due consideration to these two extreme conditions.

Wiring information

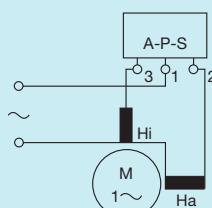

Wiring with motor start switch (A-P-S)

1. Wiring „a“:

For this standard connection please observe the following:

Mains input: terminal 1
Main phase: terminal 2
Auxiliary phase: terminal 3

The overall starting current of the motor determines the switching time of the motor start switch and must not exceed its max. current capacity.

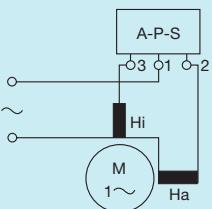

2. Wiring „b“:

This special connection is suitable for motors with relatively high short circuit currents:

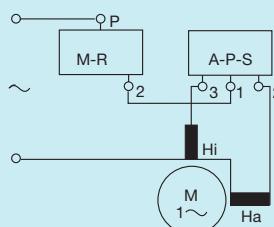

Mains input: terminal 2
Main phase: terminal 1
Auxiliary phase: terminal 3

In this case it is only the main phase current that determines the switching time of the motor start switch.

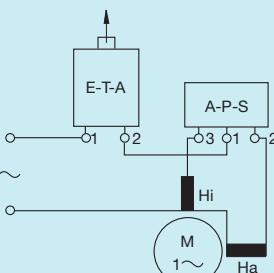

Wiring with Motor Protection Control (M-R):

Once the motor has stopped, if an attempt is made to start it again before the motor start switch has reset, a stall condition will result causing the motor protection control to disconnect the supply. The motor start switch contacts will reset, and the motor may be re-started once the motor start switch has closed again automatically.

Wiring with E-T-A Circuit Breaker:

This configuration is recommended where the function of the device or equipment is supervised and resetting should only be made manually (e.g. circular saws). Operation of the motor start switch is otherwise the same.

Example for wiring „a“:

Current of the motor unloaded
(current rating of the motor)

$$I_o = 2.6 \text{ A} = I_{\min}$$

$$I_N = 3.0 \text{ A}$$

Short-circuit current of the main phase
of main and auxiliary phase

$$I_{k\ Ha} = 7 \text{ A}$$

$$I_{k\ Ha + Hi} = 12 \text{ A} = I_{\max}$$

Formula for the motor start switch:

Current rating = $1/5 I_{\max} = 1/5 \cdot 12 = 2.4 \text{ A}$
i.e. a motor start switch current rating of 2.5 A (e.g. 2-7000-P10-KF-2.5 A) should be selected.

With wiring „a“ the overall current of the motor flows through the bimetal heater (terminal 1). The max. possible current of 12 A is lower than $6 \times 2.5 = 15 \text{ A}$, the highest admissible load for the motor start switch. Furthermore the lowest possible motor current (2.6 A) is higher than the motor start switch current rating, ensuring that the auxiliary phase will remain disconnected even when the motor is unloaded.

Example for wiring „b“:

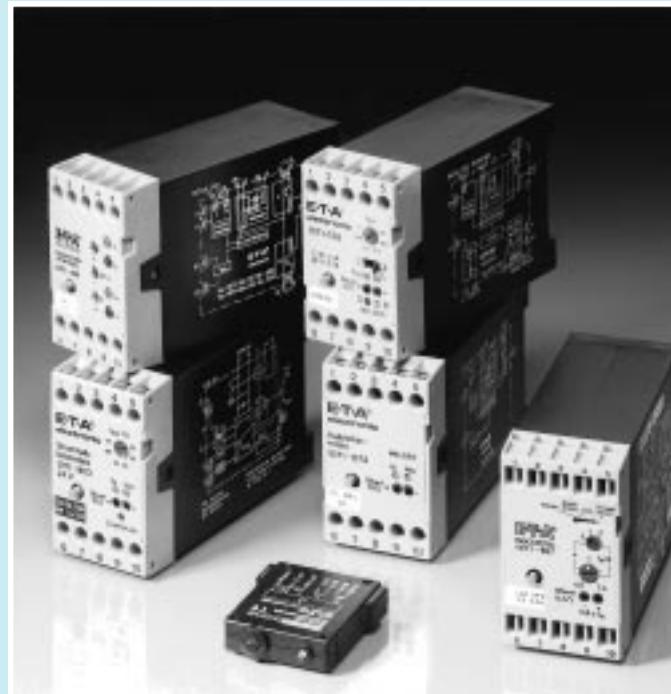

Current of the motor unloaded: $I_o = 1.5 \text{ A} = I_{\min}$
Other motor data as indicated in example „a“.

As in this case the motor start switch current rating must be selected according to the lower minimum current value, only the short-circuit current of the main phase (7 A) may flow through the bimetal heater (terminal 1) in order to prevent overloading.

Current rating = $1/5 I_{k\ Ha} = 1/5 \cdot 7 = 1.4 \text{ A}$
i.e. a motor start switch current rating of 1.5 A (e.g. 2-7000-P10-KF-1.5 A) should be selected.

The motor start switch rated at 1.5 A must be connected according to wiring „b“. In this case the max. possible load is 7 A, i.e. it is lower than $6 \times 1.5 \text{ A} = 9 \text{ A}$.

The current of the motor unloaded (1.5 A) equals the motor start switch current rating - the auxiliary phase will again remain disconnected.

**E-T-A Solid State Remote Power Controllers (SSRPCs)**

E-T-A solid state remote power controllers combine solid state switching with electronic overload protection and current limiting characteristics. Selected models also include electro-mechanical switching for applications which demand physical contact separation.

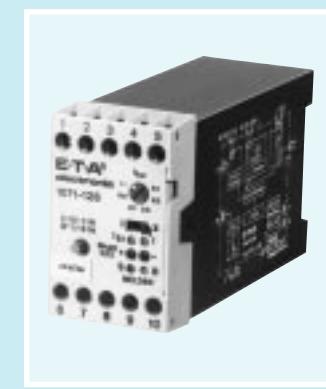

These products have been designed for the protection of programmable controller outputs, instrumentation, and process control switching circuits. Their performance characteristics are especially suitable for limiting the high in-rush currents associated with solenoids and other high resistance or inductive loads. Versions are also available for power management control in vehicles and marine craft.

Physical isolation between control and load circuits is assured through inclusion of an opto-coupler in most models, and all types provide fault status and wire break indication. Advanced thickfilm and hybrid circuitry specially developed and manufactured by E-T-A in-house make a significant contribution to the reliability of these products while ease of installation is achieved through convenient industry standard rail or socket mounting.

There is a suitable E-T-A solid state remote power controller for most process control and DC power distribution requirements and characteristics may also be tailored to special circumstances as necessary.

All dimensions without tolerances are for reference only. In the interest of improved design, performance and cost effectiveness the right to make changes in these specifications without notice is reserved. Product markings may not be exactly as the ordering codes.

Description

The E-T-A Solid State Remote Power Controller (SSRPC) E-1048-600 is an opto decoupled transistorised switching device providing both protection and signalisation.

It may be used wherever safe switching and protection of resistive, inductive or lamp loads in DC voltage systems is required.

E-1048-600

Typical applications

Automation

- interface module providing inexpensive power amplification at PLC outputs
- optimum protection of individual loads by monitoring the load circuit

Protection and control of

- motors
- solenoids
- lamps

Features

- Optimum load protection. Available in current ratings of 0.5 A; 1 A; 2 A; 4 A.
- Fast short-circuit limitation and disconnection
- Time/current dependent overload disconnection
- Remote control
- Fault indication: LED and signal output for overload/short-circuit signalization, and wire break indication in the OFF condition.
- Physically isolated fault indication.
- Compact plug-in type

Load circuit

Voltage rating U_B	DC 24 V (18...36 V)
Current rating I_N	0.5 A; 1 A; 2 A, 4 A (other ratings to special order)
Closed-circuit current I_S	typically 0.3 mA
Min. load current	> 1 mA
Voltage drop U_{DSmax}	0.15 V; 0.3 V; 0.1 V; 0.2 V
Overload disconnection	approx. 1.4 x I_N after approx. 100 ms
Short-circuit current (self-limiting)	max. 25 A (with 0.5 A and 1 A current ratings) max. 75 A (with 2 A and 4 A current ratings)
Short-circuit disconnection	<250 μs

Control circuit

Voltage rating	DC 24 V
Voltage controlled input U_E	DC 0 V < low level < 5 V DC 8.5 V < high level < 36 V
Input current I_E	1...10 mA (18...36 V)
Max. switching frequency f_{max}	500 Hz
Reset time after short-circuit/overload disconnection	1 ms

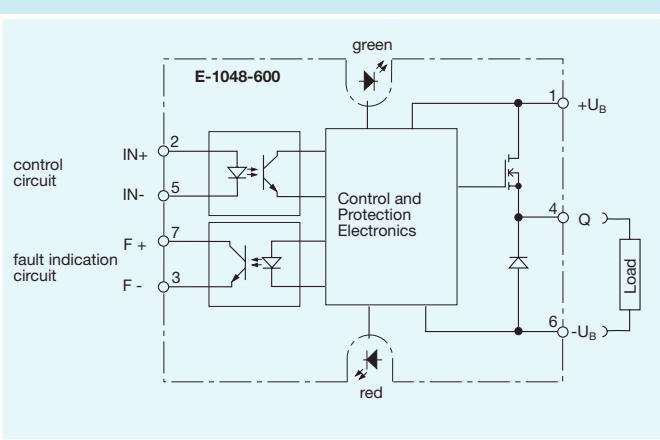

Fault indication output (opto coupler)

Voltage rating range	DC 5...36 V
Max. load current	100 mA ($\Delta U < 2 \text{ V}$), with reverse polarity protection
Wire break indication	< 100 μA load current

General data

Temperature range	0 °C ... +60 °C
Insulation voltage (IEC 664/VDE 0110)	2.5 kV rms
Mass	28 g

Connection diagram

Technical description

At the appropriate input level (>8.5 V), the opto decoupled input in the SSRPC will switch on a power transistor to connect the load to the plus pole of the load circuit supply (U_B).

The transistor will switch off when

- the control voltage (U_E) is removed
- there is a short-circuit/overload in the load circuit.

Status indication is provided by two LEDs (red and green).

Thermal-magnetic overload protection occurs at approx. 1.4 times rated current. See time/current characteristic curves.

The SSRPC is fitted with blade terminals DIN 46244-A6.3-0.8 and is suitable for plug-in mounting with various E-T-A sockets.

Control circuit

ON condition:

If a voltage higher than 8.5 V is applied to the input terminals (-IN, +IN), the control current (from the PLC) will flow through the opto coupler. The output transistor will be conductive.

OFF condition:

A control voltage lower than 5 V will switch the output transistor off.

Load circuit

The load circuit switches depending on the control signal ("0" or "1"). It is electronically monitored for faults. In the event of a short-circuit the circuit is disconnected after max. 250 μ s whilst upon inadmissible overload it is disconnected according to the time/current curves shown.

Fault indication output

The fault indication circuit (F_+ , F_-) is opto decoupled from the load and control circuit.

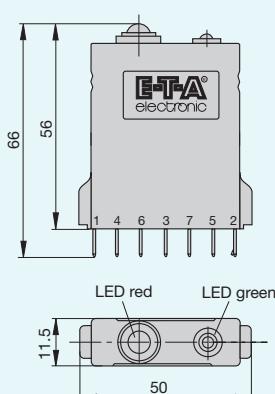

In the OFF condition (i.e. $0 < U_E < 5$ V), this circuit will provide wire break indication, with the transistor output being open.

In the ON condition, the circuit will provide short-circuit and overload monitoring and indication.

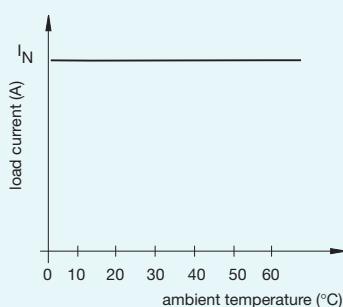

Status indication

Description

The E-T-A Remote Power Controller E-1071-073 is an electronic ON/OFF control module with protective functions and is suitable for resistive and inductive loads such as solenoids in rolling mills and other large plant applications. It is specifically used in plant modernization where the load circuit supply should be maintained at DC 24 V.

E-1071-073

Typical applications

Control of hydraulic and pneumatic systems in production lines and chemical plants.

Features

- Solid-state relay with protective functions
- Solid-state switching avoids contact arcing and welding
- Inrush current limitation
- Overload and short-circuit proof output
- Low control power
- Control current indication by LED
- Auxiliary contact

Technical data ($T_A = 25^\circ\text{C}$, $U_B = \text{DC } 24\text{ V}$)

Voltage rating U_N	DC 24 V
Operating voltage U_B	DC 20...48 V
Current rating I_N	3 A
Current consumption ($U_B = \text{DC } 24\text{ V}$, $U_s = "0"$)	typically 17 mA
Residual ripple for all voltages	max. 5 % (3 phase bridge)
Reverse polarity protection U_B (terminal 1 - terminal 2)	double pole relay
Physical isolation	2-pole - by circuit breaker hand release - approx. 5 s after overload disconnection
Load circuit	
Load output	NPN transistor, minus switching
Load rating	DC 24 V/0.2...3 A
Voltage drop at I_N	max. 1.75 V
Overload disconnection	approx. $1.1 \times I_N$
Storage time t_s (at $2xI_N$)	typically 20 ms (see storage time curve)
Short-circuit limitation	approx. $2.5 \times I_N$
Short-circuit response delay	approx. 4 μs
Load current monitoring	GREEN LED (lights at $I_{\text{load}} > 0.2\text{ A}$)
Current measuring terminals	2 x 2 mm dia. (shunt $0.1\Omega \pm 1\%$)
Leakage current ($U_s = "O"$)	max. 3 mA
Free-wheeling diode	integral
Control circuit	
Control	opto coupler in control input
Control voltage U_S	"0" = 0 ... 5 V "1" = 8.5...35 V
Control current I_S	typically 5 mA
Switching frequency f_{max}	100 Hz
Control signal ($U_s = "1"$)	YELLOW LED lights (I_S flowing)
Protection	reverse polarity protection (diode)
Signal output	
Fault indication	auxiliary contact (N/O) - max. DC 30 V/3 A - physically isolated - closed with the circuit breaker tripped
General data	
Ambient temperature	0...+60 °C (without condensation)
Terminals	screw terminals 2x2.5 mm ² to DIN 46288
Housing	clamping plate: polycarbonate GV, blue cover: polycarbonate, black top-hat rail to DIN 50022-35 to UL 94: V = 0; VDE 0304: grade 1 IP 20 housing, terminals (IEC 529/DIN 40050)

Technical description

In principle, the E-T-A SSRPC E-1071-073 operates like conventional electro-mechanical relays, with additional protective and signal functions. The control input replaces the magnetic coil and the power transistor replaces the main contact.

Control circuit

The control current flows through the LED and the opto coupler immediately a voltage higher than 8.5 V is applied at the input terminals (6 and 7). The opto coupler transmits the signal to the load circuit, at the same time switching the load transistor on. This signal is transmitted as a status signal to all monitoring circuits. The input protection diode protects the control voltage from incorrect polarization. Control current limitation is provided by a constant current diode.

Load circuit

The load circuit is switched ON or OFF according to the control signal ("0" or "1"), with electronic circuits monitoring the load circuit for faults such as overload or short-circuit. Should one of these faults occur, the monitoring circuitry will immediately react, causing the load transistor to disconnect and the circuit breaker to trip. Transistor disconnection occurs according to the storage time characteristics. The storage time increases noise immunity avoiding disconnection of non-harmful peaks such as those caused by inrush currents from lamp load connection. Storage time is not a constant quantity but is inversely proportional to the overcurrent factor.

Status indication

Status indication is provided by 2 LEDs (yellow and green) on the front of the housing.

YELLOW LED = correct control voltage
The LED indicates when the control voltage is higher than 8.5 V, with control current flowing.

GREEN LED = correct load current
The green LED indicates when the load current is higher than 0.2 A.

Faults such as too high a load resistance, wire break, poor contact, or overload/short-circuit, are available when only the yellow LED indicates. SSRPC E-1071-073 includes two current measuring terminals (2 mm dia.) on the front. These terminals provide for load current measurement in terms of voltage drop at the 0.1 shunt in the load circuit.

Description

The E-T-A Solid State Remote Power Controller E-1071-128 is an electronic ON/OFF control module with protective and signalling functions. It is suitable for inductive loads (solenoids, magnetic brakes) when the load circuit supply cannot be increased to the voltage level required for the adjustable controller E-1071-603. The operating status of the controller/load connected is continuously indicated and signalled via opto coupler.

E-1071-128

Typical applications

Control of hydraulic and pneumatic systems in production lines and chemical plants where check-back signals for process control systems are needed.

Features

- Overcurrent and short-circuit proof switching output by electronic current limitation
- Switch-off current largely independent of operating voltage
- Inrush current limitation
- Physical isolation between control and load circuit via opto coupler
- Low control power; control current indication by LED
- Solid state switching avoids contact arcing and welding
- 2-pole physical isolation upon overload or when tripped manually
- Opto decoupled ON and fault indication by LED
- Setting of minimum current on front of housing, with minimum current indication (set at approx. 50 % of the load current rating)
- Current measuring terminals on front of housing
- Reverse polarity protection in control and load circuit

Technical data ($T_A = 25^\circ\text{C}$, $U_B = \text{DC } 24\text{ V}$)

Voltage rating U_N	DC 24 V
Operating voltage U_B	DC 20...48 V
Current rating I_N	3 A
Current consumption ($U_B = \text{DC } 24\text{ V}$, $U_S = "0"$)	typically 15 mA
Residual ripple for all voltages	max. 5 % (3 phase bridge)
Reverse polarity protection U_B (terminal 1 - terminal 2)	double pole relay
Physical isolation	2-pole - by manual release (circuit breaker) - approx. 5 s after overload disconnection

Load circuit

Load output	NPN transistor, minus switching
Load rating	DC 24 V/0.2...3 A
Voltage drop at I_N	max. 2 V
Overload disconnection	approx. 1.1 x I_N
Storage time t_S (at $2xI_N$)	typically 20 ms (see storage time curve)
Short-circuit limitation	approx. 2.5 x I_N
Short-circuit response delay	approx. 4 μs
Load current monitoring I_{min} (MIN monitoring, to be set by potentiometer at 50 % of the load current rating)	GREEN LED lights at $I_{load} > 0.2 I_{min}$. switch position I: 0.1...1.1 A switch position II: 1.1 ...2.1 A
Current measuring terminals	2 x 2 mm dia. (shunt $0.1 \Omega \pm 1\%$)
Leakage current ($U_S = "0"$)	max. 3 mA
Free-wheeling diode	integral

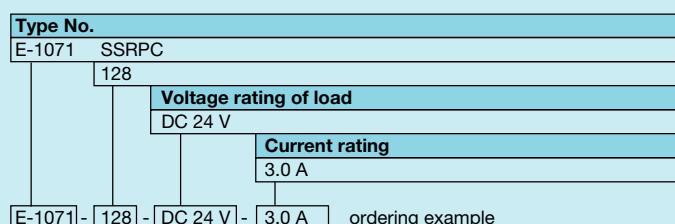

Control circuit

Control	opto coupler in control input
Control voltage U_S	"0" = 0 ... 5 V "1" = 8.5...35 V
Control current	typically 5 mA
Switching frequency f_{max}	10 Hz
Control signal ($U_S = "1"$)	YELLOW LED lights (I_S flowing)
Protection	reverse polarity protection (diode)

Status outputs

2 signal outputs	ON indication/fault indication - physically isolated by opto coupler - transistor outputs plus switching - max. DC 33 V/100 mA per output - integral free-wheeling diode - 20 ms time delay (eliminating false signals before the minimum current is reached) $U_S = "0"$: output non-conductive $U_S = "1"$: output connecting plus potential (terminal 10) to terminal 8
ON indication (terminal 8)	Fault indication (terminal 9) fault: output non-conductive no fault: output connecting plus potential (terminal 10) to terminal 9

General data

Ambient temperature	0...+60 °C (without condensation)
Terminals	screw terminals 2x2.5 mm ² to DIN 46288
Housing	clamping plate: polycarbonate GV, blue cover: polycarbonate, black
Mounting	top-hat rail to DIN 50022-35
Burning behaviour (housing)	to UL 94: V = 0; VDE 0304: grade 1
Degree of protection	IP 20 housing, terminals (IEC 529/DIN 40050)
Mounting dimensions	45 x 74 x 128 mm
Mass	approx. 320 g

Technical description

In principle, the E-T-A SSRPC E-1071-128 operates like conventional electro-mechanical relays, with additional protective and signalling functions. The control input replaces the magnetic coil and the power transistor replaces the main contact. ON and fault indication outputs have more complex functions and may not be compared with auxiliary contacts.

Control circuit

The control current flows through the LED and the opto coupler immediately a voltage higher than 8.5 V is applied at the input terminals (6 and 7). The opto coupler transmits the signal to the load circuit, at the same time switching the load transistor on. This signal is transmitted as a status signal to all monitoring circuits. The input protection diode protects the control voltage from incorrect polarization. Control current limitation is provided by a constant current diode.

Load circuit

The load circuit is switched ON or OFF according to the control signal ("0" or "1"), with electronic circuits monitoring the load circuit for faults such as overload or short-circuit. Should one of these faults occur, the monitoring circuitry will immediately react, causing the load transistor to disconnect and the circuit breaker to trip. Transistor disconnection occurs according to the storage time characteristics. The storage time increases noise immunity avoiding disconnection of non-harmful peaks such as those caused by inrush currents from lamp load connection. Storage time is not a constant quantity but is inversely proportional to the overcurrent factor.

Signal circuit

The signal circuit includes two opto couplers signalling either correct ON duty or a fault. These signals may be computer processed.

- The ON signal output indicates correct operating in the ON condition. This output is conductive

when control voltage is available

AND the load current is higher than the set minimum current

AND the circuit breaker has not tripped

AND there is no wire break.

- The fault signal output signalises the fault source which must be eliminated. This output is non-conductive when

the circuit breaker has tripped on overload or short-circuit

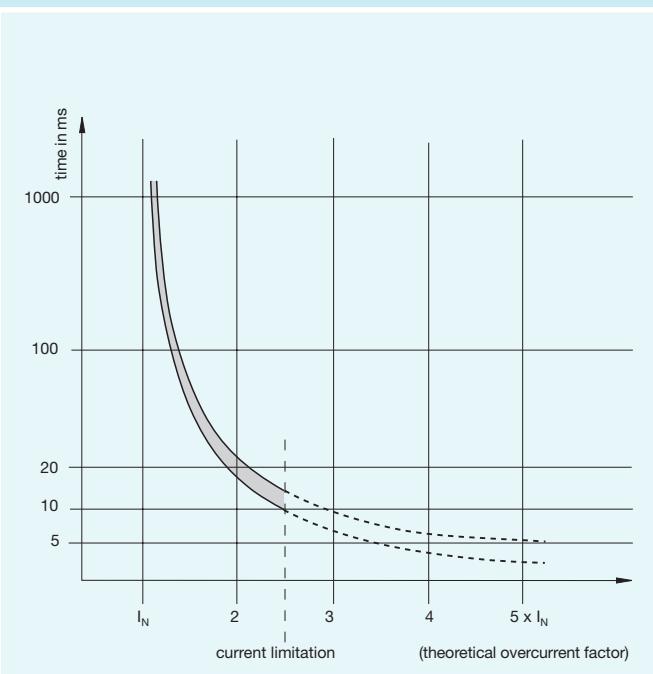

OR there is a wire break

OR control voltage is available AND the minimum current has not been reached

OR no control voltage is applied although the load current is available.

The fault signal output operates on the closed-circuit principle, i.e. it carries plus potential during fault-free operation.

Description

The E-T-A Solid State Remote Power Controller E-1071-343 is a double relay with protective function both for resistive and inductive DC 48 V loads. It is particularly suitable to control upward/downward and forward/backward movements. Failure of one channel will also cause the other channel to disconnect.

E-1071-343

Typical applications

- Valve timing gears for forward/backward or upward/downward movements (overlapping operation is possible)
- Parallel circuits which must be completely disconnected after failure of one of the circuits.

Features

- Small double relay with protective function
- Overcurrent and short-circuit proof outputs
- Two pole physical isolation of both channels
 - approx. 5 s after electronic fault disconnection
 - by manual release
- Both part units are disconnected upon isolator tripping
- Current load of each unit: max. 3 A; total current max. 4 A
- Electrical isolation between control and load circuit by means of opto coupler
- Control current indication by RED LED
- Load current indication by GREEN LED
- With auxiliary contact (fault indication)
- Temperature disconnection

Description

The E-T-A Solid State Remote Power Controllers E-1071-603/607 are electronic control modules suitable for inductive loads such as solenoids, magnetic brakes etc.

They are used

- for safe and quick switching of loads
- for monitoring the electrical condition of the loads
- for compensating different cable lengths

The load connected to the relay should be operated with a voltage higher than its rated voltage (DC 24 V) because the load current is controlled electronically (pulse-controlled characteristics). This is to ensure that in industrial plants with different cable lengths (supply cables, load cables) an increased inrush current can be applied to each load. During hold duty the load current is reduced to a smaller value (approx. 60 % of the current rating), thus reducing the operating temperature and extending the life of the loads.

E-1071-603

Typical applications

Circuits with inductive load such as

- solenoids
- magnetic brakes etc.

in large plants, e.g. rolling mills where a very high availability is required.

Features

- **Designed for inductive loads (DC 24 V)**
- Individual adjustment to various load currents ($I_N = 0.1 \dots 3.1 A$)
- Significant reduction of power loss in the load by pulse-controlled characteristics
- Short-circuit proof (short-circuit limitation); physical disconnection from supply after approx. 5 s
- Inrush current monitoring
- Physical isolation:
 - opto coupler in the control circuit
 - physical disconnection from supply
 - opto coupler for status outputs
- Reverse polarity and overvoltage protection in the control, load and status circuits
- Control current indication by YELLOW LED
- O.K. indication by GREEN LED
- Wire break indication by RED LED (load circuit)
- Fault indication by RED LED (incorrect setting etc.)
- Two status outputs for PLCs for function indication (function signal, ON signal)
- Temperature disconnection
- Quick disconnection (do not connect free-wheeling diodes to the load as the free-wheeling current is controlled electronically!)

Technical description

The max. admissible operating voltage of the SSRPC is approx. DC 60 V. The min. operating voltage is a function of the overall ohmic resistance in the load circuit. The switch-on current is reduced by

- the voltage drop on the load cable
- the load resistance increasing with the operating temperature of the load.

Minimum operating voltage $U_{B \min}$

I_N	Cable length	Cable size	$U_{B \min}$
1 A	2x50 m / 2x100 m / 2x200 m / 2x300 m	1.5 mm ²	33/35/37/40 V
		2.5 mm ²	32/33/35/37 V
2 A	2x50 m / 2x100 m / 2x200 m / 2x300 m	1.5 mm ²	35/38/44/49 V
		2.5 mm ²	34/35/39/42 V
3 A	2x50 m / 2x100 m / 2x200 m / 2x300 m	1.5 mm ²	37/41/50/58 V
		2.5 mm ²	35/38/42/48 V

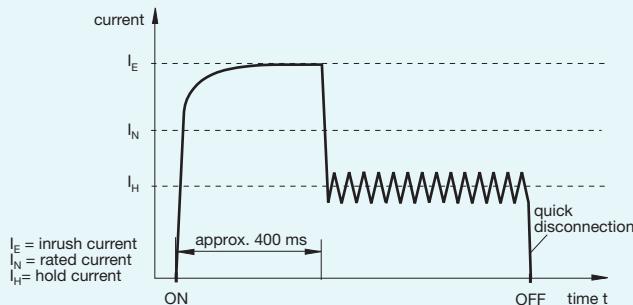

The load capacity is no longer ensured when the minimum operating voltage is under limits. The RED LED (fault) will indicate and the circuit breaker will trip after approx. 15 s.

Resistance increase in the load circuit:

- 1.5 mm² cable approx. 2.8 Ω/100 m distance
- 2.5 mm² cable approx. 1.6 Ω/100 m distance

Switch-on current

To reach the max. inrush current the output transistor connects the operating voltage to the inductive load for approx. 400 ms. After this period the load current is set back to hold current.

Rated current I_N , hold current I_H

The current rating of the applicable load at its rated voltage should be set between 0.1 and 3.1 A.

The hold current of the load is internally adjusted to 60 % of the set current rating. This hold current should be measured by means of a voltmeter connected to the 2 mm current measuring terminals (0.1 Ω shunt).

Technical description (cont'd)

Setting the current rating

The current rating is set by means of a rotary switch (switch setting 0 A - 1 A - 2 A) and a 270° potentiometer (setting range between 0.1 and 1.1 A).

The sum of the two settings should equal the current rating of the load.

Example: 24 V load with $I_N = 1.1$ A
Setting: switch 0 A + potentiometer 1.1 A, or
switch 1 A + potentiometer 0.1 A

- Operating voltage (terminals 1 and 2): reverse polarity protected by means of a relay. The relay will only pick up and apply voltage to the device if the operating voltage is correctly polarised. This relay will then remain permanently energized, without being influenced by the control input.
- Control circuit (terminals 6 and 7): reverse polarity protected by means of a diode.
- Auxiliary voltage status outputs (terminals 10 and 5): reverse polarity protected by means of a diode.
- The load output (terminals 3-4) or the inductive load must not be fitted with a free-wheeling diode as the free-wheeling current is controlled electronically. This control also causes a very short fall time of the inductive load. The solenoid connector may be provided with means of visual indication (LED).

Operating modes

Operating status	Fault-free operation		Short-circuit on the load	Wire break	U_B too low/transistor short-circuit/incorrect setting

Basic circuit diagram

Description

The E-T-A Solid State Remote Power Controllers E-1071-803 are electronic control modules suitable for inductive loads (DC 24 V) such as solenoids, magnetic brakes etc.

They are used

- for safe and quick switching of loads
- for monitoring the electrical condition of the loads
- for compensating for different cable lengths

The load connected to the relay should be operated with a voltage higher than its rated voltage (DC 24 V) because the load current is controlled electronically (pulse-controlled characteristics). This is to ensure that in industrial plants with different cable lengths (supply cables, load cables) an increased inrush current can be applied to each load. During hold duty the load current is reduced to a smaller value (between 25 % and 75 % of the current rating), thus reducing the operating temperature and extending the life of the loads.

E-1071-803

Typical applications

Circuits with inductive load such as

- solenoids
- magnetic brakes etc.

where fast switching of inductive loads is required.

Features

- **Designed for inductive loads (DC 24 V)**
- Individual adjustment to various load currents ($I_N = 0.25 \text{ A}; 0.4 \text{ A}; 1 \text{ A}; 2 \text{ A}; 3 \text{ A}$)
- Significant reduction of power loss in the load by pulse-controlled characteristics
- Short-circuit proof; short-circuit limitation and physical disconnection from supply after approx. 5 s
- Inrush current monitoring
- Overload protection (current control)
- Fast disconnection (do not connect a free wheeling diode to the load as the the free wheeling current is controlled electronically!)
- Physical isolation:
 - opto coupler in the control circuit
 - relay contacts in the load circuit
 - fault indication by means of auxiliary contact (N/O)
- Reverse polarity protection in the control and load circuits
- Control current indication by YELLOW LED
- Wire break indication by RED LED (load circuit)
- Minimum current indication by GREEN LED

Technical data ($T_A = 25^\circ\text{C}, U_B = \text{DC } 36 \text{ V}$)

Operating voltage U_B	DC 36 V (28...60 V) (function maintained up to DC 18 V)
Current rating I_N	0.25 A/0.4 A/1 A/2 A/3 A typically 30 mA
Current consumption ($U_B = \text{DC } 36 \text{ V}, U_S = "0"$)	max. 5 % (3 phase bridge)
Residual ripple for all voltages	double pole relay
Reverse polarity protection U_B (terminal 1 - terminal 2)	2-pole
Physical isolation	- by manual circuit breaker release - approx. 5 s after short-circuit disconnection
Load circuit	
Load output	NPN transistor, minus switching, pulse-controlled (approx. 180 Hz)
Load rating	DC 24 V/0.25 A (3...6 W) DC 24 V/0.4 A (6...10 W) DC 24 V/1 A (15...30 W) DC 24 V/2 A (30...50 W) DC 24 V/3 A (50...75 W) U_B/R_{total} for approx. 400 ms
Switch-on current I_E (with short-circuit limitation)	adjustable between 25 and 75 % I_N (e.g. 0.5...1.5 A with the 2 A version)
Minimum current I_{\min} (\geq hold current I_H)	approx. $2 \times I_N$ typically 10 mA
Short-circuit limitation	
Short-circuit current $I_K^{(\text{rms})}$ (depending on U_B and I_N)	
Wire break indication	in the ON and OFF condition (RED LED)
Current measuring terminals	2 x 2 mm dia. (shunt $0.1 \Omega \pm 1\%$)
Leakage current ($U_S = "0"$)	typically 1 mA
Free-wheeling circuitry	integral electronic control with quick disconnection
Control circuit	
Control	opto coupler in control input
Control voltage U_S	"0" = 0 ... 5 V "1" = 8.5...35 V typically 5 mA
Control current I_S	1 Hz
Switching frequency f_{\max}	YELLOW LED lights (I_S flowing)
Control signal ($U_S = "1"$)	reverse polarity protection (diode)
Status outputs	
Fault indication	auxiliary contact (N/O) - max. DC 30 V/3 A - physically isolated - closed when the circuit breaker has tripped
General data	
Ambient temperature	0...+60 °C (without condensation)
Terminals	screw terminals 2x2.5 mm ² to DIN 46288
Housing	clamping plate: polycarbonate GV, blue; cover: polycarbonate, black
Mounting	on top-hat rail to DIN 50022-35
Self-extinguishing properties	to UL 94: V = 0; VDE 0304: grade 1
Degree of protection (IEC 529/DIN 40050)	IP 20 housing, terminals
Mounting dimensions	45 x 74 x 128 mm
Mass	approx. 240 g

E-1071 - 803 - DC 24 V - 1 A ordering example

Technical description

Operating voltage U_B

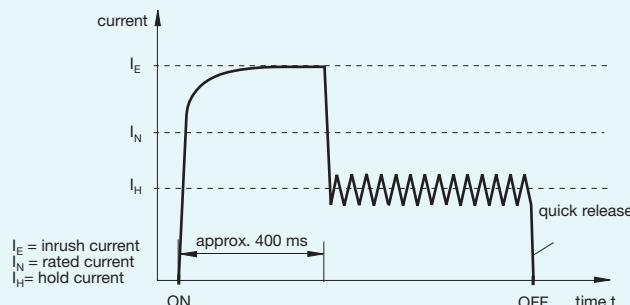

The max. admissible operating voltage of the SSRPC is approx. DC 60 V. The min. operating voltage is a function of the overall ohmic resistance in the load circuit. The switch-on current is reduced by

- the voltage drop on the load cable
- the load resistance increasing with the operating temperature of the load.

The function as shown below is no longer ensured when the minimum operating voltage (DC 28 V) is under limits. The output will then be continuously conductive, and the set minimum current may no longer be reached.

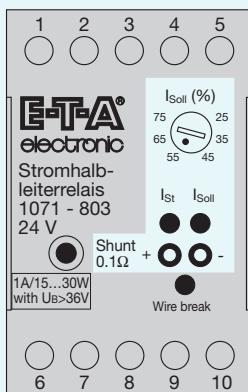

Switch-on current I_E

To reach the max. inrush current the output transistor connects the operating voltage to the inductive load for approx. 400 ms. After this period the load current is set back to hold current (= minimum current).

Setting of hold current I_H (= minimum current)

The hold current of the load is set between 25 % and 75 % I_N by the 270 ° potentiometer on the front. This hold current should be measured by means of a voltmeter connected to the 2 mm current measuring terminals (0.1 Ω shunt).

Technical description (cont'd)

Operating voltage (terminals 1 and 2): reverse polarity protected by means of a relay.

The relay will only pick up and apply voltage to the device if the operating voltage is correctly polarised. This relay will then remain permanently energized, without being influenced by the control input.

Control circuit (terminals 6 and 7): reverse polarity protected by means of a diode.

● The load output (terminals 3-4) or the inductive load must not be fitted with a free-wheeling diode as the free-wheeling current is controlled electronically. This control also causes a very short fall time of the inductive load.

The solenoid connector may be fitted with a visual indication means (LED).

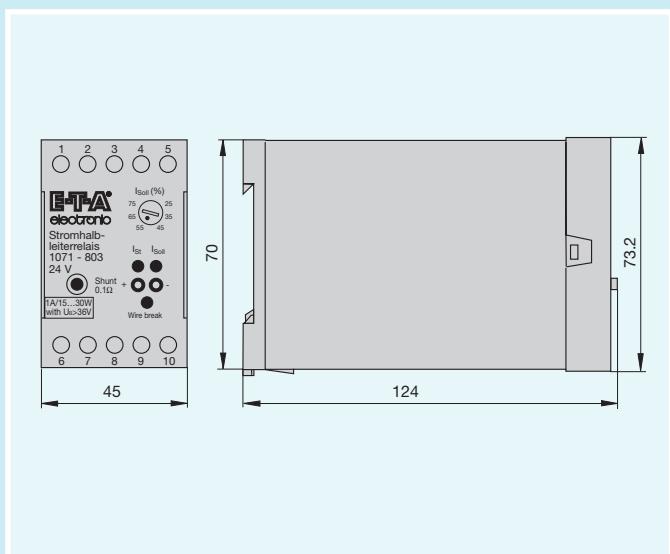

Operating modes

Operating status	Fault-free operation		Short-circuit on the load	Wire break		U_B too low/incorrect setting
control input	"0"	"1"	"1"	"0"	"1"	"1"
YELLOW LED - control current	1	1	0	1	1	1
GREEN LED - minimum current	0	1	0	0	0	0
RED LED - wire break	0	0	0	1	1	0
Auxiliary contact	open	open	closed	open	open	open
Remark	load OFF	load ON	physical isolation after approx. 5 s	no load connected wire break	current cannot be adjusted

E-T-A Flow Meters and Flow Monitors

The E-T-A range of electronic flow metering and monitoring systems has been designed to measure and supervise the flow rate of gases and liquids in pipelines.

Models operating on the calorimetric principle avoid the need for moving parts in the flow stream and are therefore especially suitable for use with liquids of high viscosity, or containing particles or contaminants. Alternatively high precision turbine sensors are available for applications which demand accurate volumetric measurement.

Calorimetric models comprise a monitoring sensor head, installed in the pipeline, and an electronic controller which may be either integrated with the monitoring head or remotely sited, according to type. These systems provide an output to signal deviation of flow from a pre-set level. Temperature monitoring and continuous analogue output are additional functions which can be selected on some models.

The E-T-A flow meter/monitor programme offers a choice of specification, performance, size and cost to meet a wide variety of different uses and budget requirements. All models are maintenance-free ensuring fit-and-forget reliability, and benefit from E-T-A's investment in process sensor research and development spanning over 25 years.

Typical applications

Applications for E-T-A flow monitors and meters extend across the entire industrial spectrum including:

- Air conditioning systems, radiators and filtration equipment
- Gas and exhaust monitoring systems in heating and power plants, blast furnaces, and gas supply systems
- Welding equipment
- Food processing, brewing and dairy product applications
- Water and waste treatment plant
- Paper manufacturing
- Petrochemical processing
- Pump monitoring and protection
- Control of lubricating, hydraulic and cooling systems
- Agricultural equipment
- Marine and transportation requirements

E-T-A Capacitive Level Sensors

E-T-A level sensors are of high quality, practically maintenance free and have a wide operating temperature range. They respond to the change of capacitance occurring when an electrode surrounded by air is immersed into the medium to be monitored. This capacitance change causes a circuit to oscillate which is processed electronically.

The different versions can be used as MIN/MAX sensors with closed circuit principle. Power failure and wire break are indicated the same way as incorrect medium level.

Models NR 150, NR 160 and NR 200 allow the selection of minimum or maximum switching by means of an integral selector switch, whereas models NR 80, NR 60 and NR 100 are factory-preset as a minimum or maximum sensor.

Model NR 200 features a potential-free relay change over contact, models NR 100, NR 150 and NR 160 a short-circuit proof plus switching transistor output, and models NR 60 and NR 80 a minus switching transistor output.

First installation

The Level Sensors are factory preset for water.

1. Install the Level Sensor and connect it as shown on the connection diagram.
2. For sensitivity setting turn the potentiometer screw until the LED changes.
3. Adjust the potentiometer screw another half turn to compensate for any tolerances and to eliminate deposits on the sensor (allow for response delay).

For other media it is necessary to readjust the sensors (make sure the medium to be monitored is available!).

These instructions do not apply to model NR 60 because its sensitivity is factory preset.

For installation details please see the applicable Installation Instructions.

All dimensions without tolerances are for reference only. In the interest of improved design, performance and cost effectiveness the right to make changes in these specifications without notice is reserved. Product markings may not be exactly as the ordering codes.

E-T-A Digital Panel Instruments

E-T-A digital panel meters are designed to measure, monitor and display electrical, thermal and mechanical values for a wide range of industrial applications.

The panel mounted instruments provide a choice of front face dimensions of 96 mm x 48 mm, 96 mm x 24 mm or 48 mm x 24 mm with a 2.5 to 5 digit 7-segment non-reflective LED display, designed for clarity under all lighting conditions.

The instruments are available for different supply voltages. Their versatility is further assured through optional features which include adjustable set points for alarm or control purposes and analogue output. Versions for current and voltage measurement can also provide true RMS readings.

E-T-A pressure meters are suitable for use with all commercially available pressure transducers with standard signal output. A DC 24 V/20 mA output, physically isolated from the measuring input of the meter's power supply, ensures an interference-free auxiliary power supply for the transducers.

The E-T-A MDZ 480 is an intelligent frequency measuring instrument which can be connected to a wide range of circuit control sensors such as proximity switches, NAMUR sensors and tachogenerators. The appropriate function is user-selected at the time of installation.

All E-T-A panel meters are designed to internationally recognised DIN, VDE and IEC specifications.

All dimensions without tolerances are for reference only. In the interest of improved design, performance and cost effectiveness the right to make changes in these specifications without notice is reserved. Product markings may not be exactly as the ordering codes.

E-T-A Sensors

E-T-A Velocity Sensors MSZ... provide contactless sensing of mechanical motion such as the rotational speed of drives or rotating shafts. Pulses are generated at ferromagnetic pick-up wheels (i.e. gears) whose teeth pass by the sensor. The electronic control circuitry and the sensor head are designed as an integral unit. The rectangular signal provided by the electronic control circuitry is independent of the pick-up geometry.

The instruments are available in a wide voltage supply and temperature range, and various dimensions and connection methods to allow a wide spread of applications in general and automotive industries.

E-T-A Pressure Sensors MSR 400 and MSR 450 are designed to convert nominal pressures up to 400 bar/5880 PSI into standard signals. The robust design of model MSR 400 (voltage supply, EMC, environmental protection, connector to DIN 72585) is perfectly suited to its application in commercial equipment and machinery/plant for the construction industry etc. Model MSR 450 featuring a stainless steel enclosure is designed for general industrial applications (connection method according to DIN 43650). Available with various threads (metric, imperial, NPT) fitting all commercial process connections.

All dimensions without tolerances are for reference only. In the interest of improved design, performance and cost effectiveness the right to make changes in these specifications without notice is reserved. Product markings may not be exactly as the ordering codes.

Description

Velocity Sensor MSZ 214/218... for connection to panel instrument MDZ 480

The inductive sensor provides contactless sensing of mechanical motion such as the rotational speed of ferro-magnetic pick-up wheels. When combined with the intelligent frequency measuring instrument MDZ 480, it is a complete speed measuring system. The integral electronic control unit generates a rectangular output signal that is independent of the pick-up geometry. The MSZ 214 has a diameter of 14 mm (M14x1), the MSZ 218 a diameter of 18 mm (M18x1). Both sensor types are available either with permanent cable with open cable end, or with 3 pole connector.

Pressure Sensors MSR 400/MSR 450 for connection to panel instrument MDR 241/480

Pressure Sensors MSR 400/MSR 450 with thick-film measuring element are designed for various pressure monitoring tasks. Their wide temperature range allows their use in harsh environments (MSR 400 for vehicles and MRS 450 for general industrial applications).

Dimensions

E-T-A Current and Voltage Monitors

E-T-A Current and Voltage Monitors series E-107.. are designed to monitor electrical circuits for current or voltage over limits.

- E-T-A Zero Current Monitors E-1076-SR signal a current flowing in the monitoring circuit when fixed current limits are exceeded. They feature a 17 mm wide rail mounted housing and may also be used to switch on an elapsed-hour meter. Internal power supply is by means of the input signal so that no additional wiring is needed.
- E-T-A Current Monitors E-1077 offer the possibility to individually set the MAX and/or MIN limit values by means of the digital switches provided on the front of the housing. The response delay may be selected. Relay contacts provide for potential-free signalization. Relay status and adjustment error is indicated by LEDs.
- E-T-A Current Protector E-1078 is designed for low voltage lighting systems. It monitors the lighting system rated current that is stored, when it is switched on, in the primary circuit of the low-voltage transformer. The rated load is stored either by operation of the push button on the device or via the light switch. A short-circuit in the lamp circuit or an overload will cause the Current Protector to immediately disconnect the system. The product is available with a rail mounted housing (for consumer unit installation) or in a housing for surface mounting at or in the transformer.

● E-T-A Combi Safety Protection E-1078-911 allows the simultaneous connection of two powerful loads such as a washing machine and a dryer to a 16 A socket with earthing contact. One of the two sockets has priority and is connected to the washing machine. When the current required by the washing machine exceeds a set limit of approx. 15.5 A (during heating), the second socket is disconnected, and reconnected only when the current falls to the set lower limit. Appliance combinations such as dishwasher and hot-water heater may also be operated this way.

● E-T-A Voltage Monitor E-1079 monitors set MAX and/or MIN voltage limits in a circuit. Limit value setting is by means of the digital switches provided on the front of the housing. Additional features are relay outputs, selectable response delay, LED status indication, and rail mounted housings.

● E-T-A Voltage Monitor E-1079-600 is available in a 12 mm wide housing for plug-in mounting utilising E-T-A socket 17-P10-Si. It is designed to monitor typical AC and DC supply voltages with set tolerances, e.g. DC 24 V $\pm 25\%$. The actual voltage is indicated by two LEDs and a MOS output. This system, too, saves additional wiring by taking its internal power supply from the input signal.

All dimensions without tolerances are for reference only. In the interest of improved design, performance and cost effectiveness the right to make changes in these specifications without notice is reserved. Product markings may not be exactly as the ordering codes.

Type No.
E-1076-SR-...
E-1077-51-...

Description

monitors a MIN limit value in an AC circuit via a current transformer. If a set value is exceeded, the triac or transistor will enable the output, and the status is indicated by LED. The low power required by the Zero Current Monitor is taken from the input signal.

monitors a circuit by adjustable MIN and/or MAX limit values. The response values may be directly preset by means of digital switches in the front of the housing.

When set values are exceeded, the applicable relay (change over) will switch off. The response delay may be set between 0.2 and 30 sec. Relay status, operating voltage and adjustment error are indicated by LED.

Version

MIN limit value (Zero Current Monitor)

- 31: MAX limit value
- 41: MIN limit value
- 51: MAX and MIN limit value

**Setting range
(measuring range)**

AC 5 A (response threshold: 100 mA)
AC 16 A (response threshold: 1 A)
Values cannot be set

AC 0.1 ... 19.9 A
AC 0.01 ... 1.99 A
DC 0.1 ... 19.9 mA

Internal resistance

-

approx. 1 mΩ (with AC 19.9 A)
approx. 10 mΩ (with AC 1.99 A)
1 Ω (with DC 19.9 mA)

Accuracy

-

1 % ± 2 digits

Switching hysteresis

-

≤ 0.1 A	(with AC 19.9 A)
≤ 0.01 A	(with AC 1.99 A)
≤ 0.1 mA	(with DC 19.9 mA)

Response delay

-

adjustable between 0.2...30 s

Supply voltage

 AC 0...250 V rated voltage
(= supply voltage)

AC 115 V (90 ... 135 V)
AC 230 V (200 ... 244 V)

Output

AC: triac 250 V/200 mA
DC: transistor 60 V/ 50 mA

relay with change over contact AC 250 V/5 A

Temperature range

0 ... +60 °C

0 ... +50 °C

Degree of protection

housing: IP 20
terminals: IP 20

housing: IP 50
terminals: IP 20

Mounting method

 rail mounted on 35 mm symmetric rail to
DIN 50 022 and DIN 50 035

 rail mounted on 35 mm symmetric rail
to DIN 50022

Dimensions

17 x 63 x 64 mm

74 x 45 x 124 mm

Technical data

see CPI cat. pages 135 - 136

see CPI cat. pages 137 - 138

Type No.

E 1078-421-/ 431-...

E 1078-422-/ 432-/ 482-...

Description

The Current Protector is connected in the primary circuit before the low-voltage transformer (e.g. AC 230 V/12 V). Irregularities in the secondary circuit, such as overloads or short-circuits, will cause the Protector to immediately disconnect the system. Underload (e.g. defective terminal connections) also causes system disconnection. Error indication by red LED. After removal of the fault, the system can be reconnected by operation of the storage push button on the Protector or by operating the light switch.

Protection of lighting systems

- Available housing variants:
 - track mountable on 35 mm EN rails
 - housing for surface mounting in transformers
- Suitable for dimmer systems.
- Detecting defective terminal connections
- Line resistances, transformer and lamp tolerances are compensated for by the adjustment.
- VDE approval in place
- Option: load storage via light switch.

Variants

E 1078-421 (up to 400 W)
E 1078-431 (up to 600 W)

E 1078-422 (up to 400 W)
E 1078-432 (up to 600 W)
E 1078-482 (up to 600 W) load storage via light switch

Protection from

short-circuit, overload, underload

short-circuit, overload, underload

Lamp capacity

60 - 300 W
100 - 400 W
300 - 600 W

60 - 300 W
100 - 400 W
300 - 600 W

Voltage rating

AC 230 V ± 10 % / 50 Hz

AC 230 V ± 10 % / 50 Hz
AC 120 V ± 10 % / 60 Hz

Suitable for lighting systems with dimmers

yes

yes

Temperature range

0 ... +45 °C

0 ... +60 °C

Overload response

steplessly adjustable

steplessly adjustable

Typical trip times

overload
short-circuit
underload

200 ms to 2 s (depending on overload)
200 ms
3 s

200 ms to 2 s (depending on overload)
200 ms
3 s

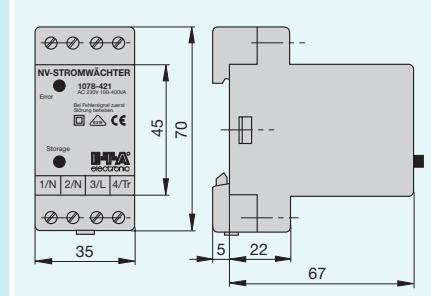

Technical data

see CPI cat. pages 139 - 140

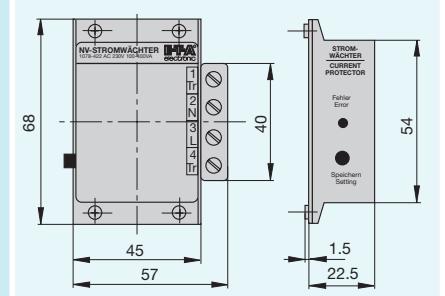

see CPI cat. pages 141 - 142

Dimensions

Track-mountable housing

Surface housing

Type No.

E-1078-911**Description**

Two powerful appliances such as a washing machine and a dryer may be connected to a European style 16 A household socket without overloading the circuit. The E-TA Combi Safety Protector E-1078-911 connects one of the appliances continuously to power. The second appliance is disconnected from the supply for a short time when the total current consumption reaches approx. 15.5 A - during water heating for example. Upon completion of the heating cycle of the first appliance, the second one will be automatically reconnected.

Upper response threshold

typically 15.5 A ± 1 A

Lower response threshold

typically 2.0 A ± 1 A

Supply voltage

N/A

Temperature range

0 ... +45 ° C

Environmental duty

for normal dry, clean domestic conditions

Dimensions

255 x 60 x 40 mm

Technical data

see CPI cat. page 143

Type No.	E-1079-51-...	E-1079-60-...
		
Description	Voltage Monitor E-1079-... monitors set MAX and/or MIN voltage limits. The response can be directly preset by the digital switches on the front of the housing. When the set limits are exceeded, the applicable relay (change over) will switch off. The response delay may be set between 0.2 and 30 s. Relay status, operating voltage and adjustment error are indicated by LEDs.	Voltage Monitor E-1079-600 monitors DC or AC voltages with set tolerances. Two LEDs indicate the operating status and over limits, with an opto coupler providing a physically isolated output signal. The power requirement of the Monitor is taken from the input signal.
Variants	-31: MAX limit value -41: MIN limit value -51: MAX and MIN limit values	MIN and MAX limit value (not adjustable)
Setting range (measuring range)	DC 1... 199 mV DC 0.01... 1.99 V DC 0.1 ... 19.9 V	DC 12 V ±25 % (9... 15 V) DC 24 V ±25 % (18... 30 V) DC 48 V ±25 % (36... 60 V) DC 110 V +10 %/-15 % (93.5... 121 V) DC 220 V +10 %/-15 % (187 ... 242 V) AC 115 V +10 %/-15 % (97.8...126.5 V) AC 230 V +10 %/-15 % (195.5... 253 V)
Internal resistance	DC: $R_i = 20 \text{ k}\Omega$ (with 199 mV) DC: $R_i = 100 \text{ k}\Omega$ (with 1.99 V and 19.9 V)	3 mA (DC/AC) load current
Accuracy	1 % ± 2 digits	$U_{\min} -10 \% U_n \dots U_{\min}$ $U_{\max} \dots U_{\max} +10 \% U_n$
Switching hysteresis	1 digit with -51: setting distance between MIN and MAX limit value ≥ 5 digits	–
Response delay	0.2 ... 30 sec, adjustable	–
Supply voltage	AC 115 V (90 ... 135 V) AC 230 V (200 ... 244 V)	N/A
Output	relay with change over contact AC 250 V/5 A	MOS output AC/DC 250 V/80 mA
