8253

DISTINCTIVE CHARACTERISTICS

- SMD/DESC qualified
- Both Binary and BCD counting
- Single +5-V supply
- Three independent 16-bit counters
- DC to 5 MHz
- Programmable counter modes
- Bus-oriented I/O

GENERAL DESCRIPTION

The 8253 is a programmable counter/timer chip designed for use with 8080A/8085A microprocessors. It uses NMOS technology with a single +5-V supply and is a direct replacement for Intel's 8253/8253-5.

Each device is organized as three independent 16-bit counters, each counter having a rate of up to 5 MHz. All modes of operation are software-programmable. For improved performance devices, see the Am9513A System Timing Controller.

ABSOLUTE MAXIMUM RATINGS

Storage Temperature -65 to +150°C
 Voltage On Any Pin
 with Respect to Ground -0.5 to +7.0 V
 Power Dissipation 1 W

Stresses above those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent device failure. Functionality at or above these limits is not implied. Exposure to absolute maximum ratings for extended periods may affect device reliability.

OPERATING RANGES

Military (M) Devices
 Temperature (T_C) -55 to 125°C
 Supply Voltage (V_{CC}) 5 V ±10%

Operating ranges define those limits between which the functionality of the device is guaranteed.
