74VHC126 Quad Buffer with TRI-STATE® Outputs

General Description

The VHC126 contains four independent non-inverting buffers with TRI-STATE outputs and is an advanced high-speed CMOS device fabricated with silicon gate CMOS technology. It achieves the high-speed operation similar to equivalent Bipolar Schottky TTL while maintaining the CMOS low power dissipation.

An input protection circuit insures that 0V to 7V can be applied to the input pins without regard to the supply voltage. This device can be used to interface 5V to 3V systems and two supply systems such as battery backup. This circuit prevents device destruction due to mismatched supply and input voltages.

Features

- High speed
- Lower power dissipation: $I_{CC} = 4 \mu A$ (max) at $T_A = 25^\circ C$
- High noise immunity: $V_{NIH} = V_{NIL} = 28\% V_{CC}$ (min)
- All inputs are equipped with a power down protection function
- Balanced propagation delays: $t_{PLH} \approx t_{PHL}$
- Wide operating voltage range: $V_{CC} (opr) = 2V \sim 5.5V$
- Low noise: $V_{OLP} = 0.8V$ (max)
- Pin and function compatible with 74HC126
- Logic high output enables
