Note 4: The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated
at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the Absolute Maximum Ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
Note 5: $\mathrm{I}_{\mathrm{O}}$ Absolute Maximum Rating must be observed.
Note 6: Floating or unused control inputs must be HIGH or LOW.
Note: An external driver must source at least the specified current to switch from LOW-to-HIGH.
Note: An external driver must sink at least the specified current to switch from HIGH-to-LOW.
