DESCRIPTION

The LCX373 is a low VOLTAGE CMOS OCTAL D-TYPE LATCH with 3 STATE OUTPUT NON INVERTING fabricated with sub-micron silicon gate and double-layer metal wiring C²MOS technology. It is ideal for low power and high speed 3.3V applications; it can be interfaced to 5V signal environment for both inputs and outputs.

These 8 bit D-Type latches are controlled by a

latch enable input (LE) and an output enable input (\overline{OE}).

While the LE input is held at a high level, the Q outputs will follow the data input precisely.

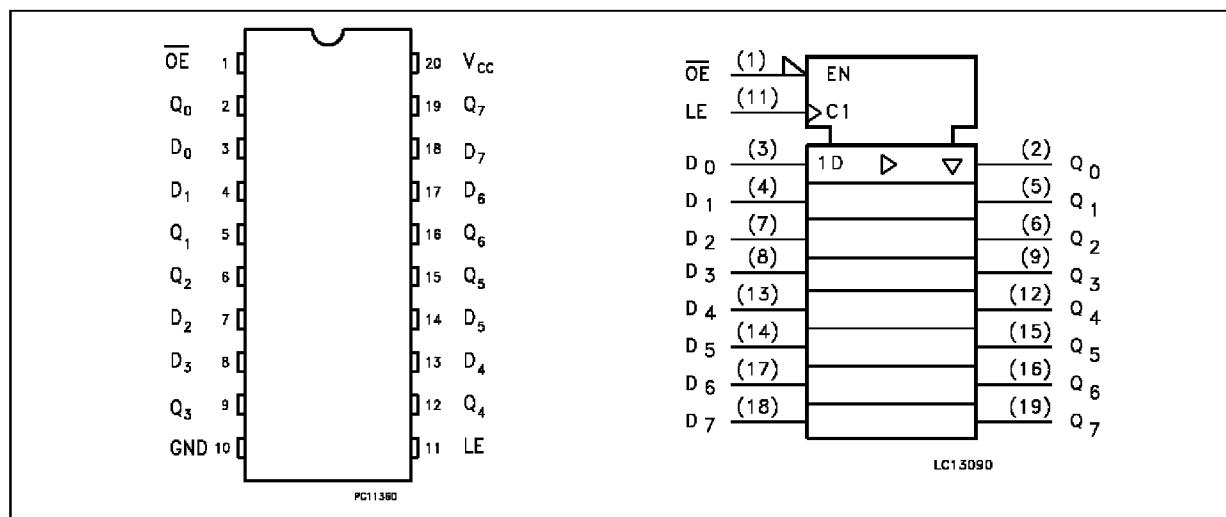

When the LE is taken low, the Q outputs will be latched precisely at the logic level of D input data.

While the \overline{OE} input is low, the 8 outputs will be in a normal logic state (high or low logic level) and while high level the outputs will be in a high impedance state.

It has same speed performance at 3.3V than 5V, AC/ACT family, combined with a lower power consumption.

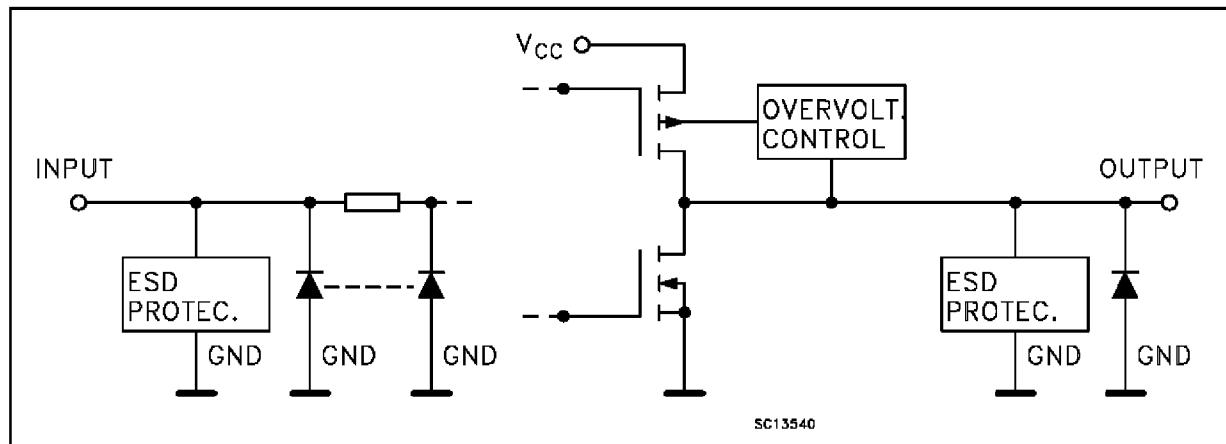

All inputs and outputs are equipped with protection circuits against static discharge, giving them 2KV ESD immunity and transient excess
