DESCRIPTION

The LCX16240A is a low voltage CMOS 16-BIT BUS BUFFER fabricated with sub-micron silicon gate and double-layer metal wiring C²MOS technology. It is ideal for low power and high speed 3.3V applications; it can be interfaced to 5V signal environment for both inputs and outputs.

Any $n\bar{G}$ output control governs four BUS BUFFERS. Output Enable input ($n\bar{G}$) tied together gives full 16-bit operation.

When $n\bar{G}$ is LOW, the outputs are on. When $n\bar{G}$ is HIGH, the outputs are in high impedance state.

This device is designed to be used with 3 state memory address drivers, etc.

It has better speed performance at 3.3V than 5V LSTTL family combined with the true CMOS low power consumption.

All inputs and outputs are equipped with protection circuits against static discharge, giving them 2KV ESD immunity and transient excess voltage.
