Features

- Meets or exceeds JEDEC #7 specs
- Max DC operating supply current: 8 μ A @25 °C
- Fast propagation delay times
- Plug in replacement for LSTTL series
- Full TTL, NMOS and CMOS compatibility
- 55 °C to +125 °C operating temperature range
- Capable of operation over 3-volt to 6-volt range
- High speed silicon-gate CMOS technology
- MIL STD 883B Screening
- Leadless chip carrier available
- Excellent latch-up immunity

General Description

These 8 bit flip flops feature 3-state operation and are designed for use in high speed, bus oriented systems.

These octal flip flops are edge-triggered D-type. On the positive transition of the clock, the Q outputs will be set to the last state that was setup at the D-inputs.

A buffered output control input can be used to place the outputs in either an active state or in a high impedance state. While in the high impedance state, the outputs neither load nor drive the bus lines.

These devices are manufactured and tested to meet or exceed the specifications of the EIA JEDEC 40.2 committee Standard #7 for High Speed CMOS Logic.

Absolute Maximum Ratings*

Rating	Value
Supply voltage, V_{CC}	-0.5V to +7.0V
Input voltage, V_I	-1.5V to $V_{CC} + 1.5V$
DC input diode current, I_{IK}	$\pm 100mA$
DC output diode current, I_{OK}	$\pm 100mA$
Short circuit output current, I_{SC} (not more than 1 output for 1 second)	$\pm 100mA$
DC V_{CC} or ground current, I_{CC} or I_{GND}	$\pm 70mA$
Operating temperature range, T_A : 74HCT (Commercial) 54HCT (Military)	-40 °C to +85 °C -55 °C to +125 °C
Storage temperature, T_S	-65 °C to +150 °C
Power dissipation, P_D	500mW

* Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may effect device reliability.
