DESC FORM 193 SEP 87

• U.S. GOVERNMENT PRINTING OFFICE: 1987 — 748-129/60911

- 1.1 Scope. This drawing forms a part of a one part one part number documentation system (see 6.6 herein). Two product assurance classes consisting of military high reliability (device classes B, Q, and M) and space application (device classes S and V), and a choice of case outlines and lead finishes are available and are reflected in the Part or Identifying Number (PIN). Device class M microcircuits represent non-JAN class B microcircuits in accordance with 1.2.1 of MIL-STD-883, "Provisions for the use of MIL-STD-883 in conjunction with compliant non-JAN devices". When available, a choice of radiation hardness assurance (RHA) levels are reflected in the PIN.
 - 1.2 PIN. The PIN shall be as shown in the following example:

- 1.2.1 Radiation hardness assurance (RHA) designator. Device classes M, B, and S RHA marked devices shall meet the MIL-M-38510 specified RHA levels and shall be marked with the appropriate RHA designator. Device classes Q and V devices shall meet or exceed the electrical performance characteristics specified in table I herein after exposure to the specified irradiation levels specified in the absolute maximum ratings herein and the RHA marked device shall be marked in accordance with MIL-I-38535. A dash (-) indicates a non-RHA device.
 - 1.2.2 Device type(s). The device type(s) shall identify the circuit function as follows:

Device type	Generic number	<u>Circuit function</u>
01	54ACT11353	Dual 1-of-4 data selectors/multiplexers with three-state outputs, TTL compatible inputs

1.2.3 Device class designator. The device class designator shall be a single letter identifying the product assurance level as follows:

Device requirements documentation						
Vendor self-certification to the requirements for non-JAN class B microcircuits in accordance with 1.2.1 of MIL-STD-883						
Certification and qualification to MIL-M-38510						
Certification and qualification to MIL-I-38535						

Case outline

1.2.4 Case outline(s). For device classes M, B, and S, case outline(s) shall meet the requirements in appendix C of MIL-M-38510 and as listed below. For device classes Q and V, case outlines shall meet the requirements of MIL-I-38535, appendix C of MIL-M-38510, and as listed below.

E	D-2 (16-lead, .840" x .310" x .200"), dual-in-line package						
2	C-2 (20-terminal, .358" x .358" x .100"), square chip carrier package

HANDBOOK

MILITARY

MIL-HDBK-780

Standardized Military Drawings.

(Copies of the specifications, standards, bulletin, and handbook required by manufacturers in connection with specific acquisition functions should be obtained from the contracting activity or as directed by the contracting activity.)

2.2 Order of precedence. In the event of a conflict between the text of this drawing and the references cited herein, the text of this drawing shall take precedence.

3. REQUIREMENTS

- 3.1 Item requirements. The individual item requirements for device class M shall be in accordance with 1.2.1 of MIL-STD-883, "Provisions for the use of MIL-STD-883 in conjunction with compliant non-JAN devices" and as specified herein. The individual item requirements for device classes B and S, shall be in accordance with MIL-M-38510 and as specified herein. For device classes B and S a full electrical characterization table for each device type shall be included in this SMD. The individual item requirements for device classes Q and V shall be in accordance with MIL-I-38535 and as specified herein.
- 3.2 Design, construction, and physical dimensions. The design, construction, and physical dimensions shall be as specified in MIL-M-38510 for device classes M, B, and S and MIL-I-38535 for device classes Q and V and herein.
 - 3.2.1 Case outline(s). The case outline(s) shall be in accordance with 1.2.4 herein.

STANDARDIZED MILITARY DRAWING DEFENSE ELECTRONICS SUPPLY CENTER DAYTON, OHIO 45444 SIZE A 5962-90906 REVISION LEVEL SHEET 4

- 3.2.2 Terminal connections. The terminal connections shall be as specified on figure 1.
- 3.2.3 Truth table. The truth table shall be as specified on figure 2.
- 3.2.4 Logic diagram. The logic diagram shall be as specified on figure 3.
- 3.3 Electrical performance characteristics and postirradiation parameter limits. Unless otherwise specified herein, the electrical performance characteristics and postirradiation parameter limits are as specified in table I and shall apply over the full case operating temperature range.
- 3.4 Electrical test requirements. The electrical test requirements shall be the subgroups specified in table IIA. The electrical tests for each subgroup are defined in table I.
- 3.5 Marking. The part shall be marked with the PIN listed in 1.2 herein. Marking for device class M shall be in accordance with MIL-STD-883 (see 3.1 herein). In addition, the manufacturer's PIN may also be marked as listed in MIL-BUL-103. Marking for device classes B and S shall be in accordance with MIL-M-38510. Marking for device classes Q and V shall be in accordance with MIL-I-38535.
- 3.5.1 Certification/compliance mark. The compliance mark for device class M shall be a "C" as required in MIL-STD-883 (see 3.1 herein). The certification mark for device classes B and S shall be a "J" or "JAN" as required in MIL-M-38510. The certification mark for device classes Q and V shall be a "OML" as required in MIL-I-38535.
- 3.6 Certificate of compliance. For device class M a certificate of compliance shall be required from a manufacturer in order to be listed as an approved source of supply in MIL-BUL-103 (see 6.7.3 herein). For device classes Q and V, a certificate of compliance shall be required from a QML-38535 listed manufacturer in order to supply to the requirements of this drawing (see 6.7.2 herein). The certificate of compliance submitted to DESC-ECS prior to listing as an approved source of supply for this drawing shall affirm that the manufacturer's product meets, for device class M the requirements of MIL-STD-883 (see 3.1 herein), or for device classes Q and V, the requirements of MIL-I-38535 and the requirements herein.
- 3.7 Certificate of conformance. A certificate of conformance as required for device class M in MIL-STD-883 (see 3.1 herein), or device classes B and S in MIL-M-38510, or for device classes Q and V in MIL-I-38535 shall be provided with each lot of microcircuits delivered to this drawing.
- 3.8 Notification of change for device class M. For device class M notification to DESC-ECS of change of product (see 6.2 herein) involving devices acquired to this drawing is required for any change as defined in MIL-STD-480.
- 3.9 Verification and review for device class M. For device class M, DESC, DESC's agent and the acquiring activity retain the option to review the manufacturer's facility and applicable required documentation. Offshore documentation shall be made available onshore at the option of the reviewer.
- 3.10 Microcircuit group assignment for device classes M, B, and S. Device classes M, B, and S devices covered by this drawing shall be in microcircuit group number 39 (see MIL-M-38510, appendix E).
- 3.11 Serialization for device class S. All device class S devices shall be serialized in accordance with MIL-M-38510.
 - 4. QUALITY ASSURANCE PROVISIONS
- 4.1~Sampling~and~inspection. For device class M, sampling and inspection procedures shall be in accordance with section 4~of~MIL-M-38510 to the extent specified in MIL-STD-883 (see 3.1~herein). For device classes B and S, sampling and inspection procedures shall be in accordance with MIL-M-38510 and method 5005~of~MIL-STD-883, except as modified herein. For device classes Q and V, sampling and inspection procedures shall be in accordance with MIL-I-38535.

STANDARDIZED SIZE Α **MILITARY DRAWING** 5962-90906 DEFENSE ELECTRONICS SUPPLY CENTER DAYTON, OHIO 45444 **REVISION LEVEL** SHEET

NOTES:

 C_L includes probe and jig capacitance.
 All input pulses are supplied by the generators having the following characteristics: PRR < 10 MHz, Z₀ = 50Ω, t_r < 3.0 ns, t_f < 3.0 ns.
 Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.

4. The outputs are measured one at a time with one transition per measurement.

FIGURE 4. Test circuit and switching waveforms.

- 4.2 Screening. For device class M, screening shall be in accordance with method 5004 of MIL-STD-883, and shall be conducted on all devices prior to quality conformance inspection. For device classes B and S, screening shall be in accordance with method 5004 of MIL-STD-883, and shall be conducted on all devices prior to qualification and quality conformance inspection. For device classes Q and V, screening shall be in accordance with MIL-I-38535, and shall be conducted on all devices prior to qualification and technology conformance inspection. The following additional criteria shall apply.
 - a. Burn-in test, method 1015 of MIL-STD-883.
 - (1) Test condition A, B, C or D. For device class M, the test circuit shall be submitted to DESC-ECS for review with the certificate of compliance. For device classes B and S, the test circuit shall be submitted to the qualifying activity. For device classes Q and V, the test circuit shall be submitted to DESC-ECS with the certificate of compliance and under the control of the device manufacturer's technical review board (TRB) in accordance with MIL-I-38535.
 - (2) $T_A = +125^{\circ}C$, minimum.
 - b. Interim and final electrical test parameters shall be as specified in table IIA herein. For device class M, interim electrical parameters tests prior to burn-in are optional optional at the discretion of the manufacturer.
- 4.2.1 Additional screening for device class V. Additional screening for device class V beyond the requirements of device class Q shall be as specified in appendix B of MIL-I-38535 and as detailed in table IIB herein. These additional screens may be used to satisfy space system requirements and shall be reflected in the PIN.
 - 4.3 <u>Qualification inspection</u>.
- 4.3.1 Qualification inspection for device classes B and S. Qualification inspection for device classes B and S shall be in accordance with MIL-M-38510. Inspections to be performed shall be those specified in method 5005 of MIL-STD-883 and herein for groups A, B, C, D, and E inspections (see 4.4.1 through 4.4.5).
- 4.3.2 Qualification inspection for device classes Q and V. Qualification inspection for device classes Q and V shall be in accordance with MIL-I-38535. Inspections to be performed shall be those specified in MIL-I-38535 and herein for groups A, B, C, D, and E inspections (see 4.4.1 through 4.4.5).
- 4.4 Conformance inspection. Quality conformance inspection for device class M shall be in accordance with MIL-STD-883 (see 3.1 herein) and as specified herein. Quality conformance inspection for device classes B and S shall be in accordance with MIL-M-38510 and as specified herein. Inspections to be performed for device classes M, B, and S shall be those specified in method 5005 of MIL-STD-883 and herein for groups A, B, C, D, and E inspections (see 4.4.1 through 4.4.5). Technology conformance inspection for classes Q and V shall be in accordance with MIL-I-38555 including groups A, B, C, D, and E inspections and as specified herein.
 - 4.4.1 Group A inspection.
 - a. Tests shall be as specified in table IIA herein.
 - b. For device class M subgroups 7 and 8 tests shall be sufficient to verify the truth table. For device classes B and S subgroups 7 and 8 tests shall be sufficient to verify the truth table as approved by the qualifying activity. For device classes Q and V, subgroups 7 and 8 shall include verifying the functionality of the device; these tests shall have been fault graded in accordance with MIL-STD-883, test method 5012 (see 1.5 herein).

- 1/ Blank spaces indicate tests are not applicable.
- $\overline{2}$ / * indicates PDA applies to subgroup 1.
- c. Subgroups 5 and 6 in table I, method 5005 of MIL-STD-883 shall be omitted.
- d. Subgroup 4 ($c_{\rm IN}$, $c_{\rm OUT}$, and $c_{\rm PD}$ measurement) shall be measured only for the initial test and after process or design changes which may affect capacitance. Capacitance shall be measured between the designated terminal and GND at a frequency of 1 MHz. Test all applicable pins on 5 devices with zero failures.
- 4.4.2 Group B inspection. The group B inspection end-point electrical parameters shall be as specified in table ITA herein.
 - 4.4.3 Group C inspection.
 - a. End-point electrical parameters shall be as specified in table IIA herein.
 - b. Steady-state life test conditions, method 1005 of MIL-STD-883:
 - (1) Test condition A, B, C or D. For device class M the test circuit shall be submitted to DESC-ECS for review with the certificate of compliance. For device classes B and S the test circuit shall be submitted to the qualifying activity. For device classes Q and Y the test circuit shall be submitted to DESC-ECS with the certificate of compliance and under the control of the device manufacturer's TRB in accordance with MIL-I-38535.

STANDARDIZED MILITARY DRAWING DEFENSE ELECTRONICS SUPPLY CENTER DAYTON, OHIO 45444	SIZE A	5962-90906		
		REVISION LEVEL	SHEET 12	

TABLE IIB. Additional screening for device class V.

Test	MIL-STD-883, test method	 Lot requirement
Particle impact noise detection	2020	100%
Internal visual	2010, condition A or approved alternate	100%
 Nondestructive	2023 or approved alternate	100%
Reverse bias burn-in	1015	100%
Burn-in 	1015, total of 240 hours at +125°C	100%
ladiographic 2012		100%

- (2) $T_A = +125^{\circ}C$, minimum.
- (3) Test duration: 1,000 hours, except as permitted by method 1005 of MIL-STD-883.
- 4.4.4 Group D inspection. For group D inspection end-point electrical parameters shall be as specified in table IIA herein.
- 4.4.5 Group E inspection. Group E inspection is required only for parts intended to be marked as radiation hardness assured (see 3.5 herein). RHA levels for device classes B and S shall be M, D, R, and H and for device class M shall be M and D. RHA quality conformance inspection sample tests shall be performed at the level specified in the acquisition document. RHA tests for device classes Q and V shall be performed in accordance with MIL-I-38535 and 1.2.1 herein.
 - a. RHA tests for device classes B and S for levels M, D, R, and H or for device class M for levels M and D shall be performed through each level to determine at what levels the devices meet the RHA requirements. These RHA tests shall be performed for initial qualification and after design or process changes which may affect the RHA performance of the device.
 - b. End-point electrical parameters shall be as specified in table IIA herein.
 - c. Prior to total dose irradiation, each selected sample shall be assembled in its qualified package. It shall pass the specified group A electrical parameters in table I for subgroups specified in table IIA herein.
 - d. For device classes M, B, and S, the devices shall be subjected to radiation hardness assured tests as specified in MIL-M-38510 for RHA level being tested, and meet the postirradiation end-point electrical parameter limits as defined in table I at $T_A = +25\,^{\circ}\text{C}$ ±5 percent, after exposure.

STANDARDIZED MILITARY DRAWING DEFENSE ELECTRONICS SUPPLY CENTER DAYTON, OHIO 45444	SIZE A	5962-90906			
			REVISION LEVEL	-	SHEET

- e. Prior to and during total dose irragiation testing, the devices shall be biased to establish a worst case condition as specified in the radiation exposure circuit.
 - (1) Inputs tested high, V_{CC} = volts dc, R_{CC} = Ω +5%, V_{IN} = volts dc, R_{IN} = Ω +20%, and all outputs are open. (Values will be added when they become available.)
 - (2) Inputs tested low V_{CC} = volts dc, R_{CC} = Ω +5%, V_{IN} = 0.0 V dc, and all outputs are open. (Values will be added when they become available.)
- f. For device classes M, B, and S, subgroups 1 and 2 in table V, method 5005 of MIL-STD-883 shall be tested as appropriate for device construction.
- y. When specified in the purchase order or contract, a copy of the RHA delta limits shall be specified.
- PACKAGING
- 5.1 Packaging requirements. The requirements for packaging shall be in accordance with MIL-M-38510 for device classes M, B, and S and MIL-I-38535 for device classes Q and V.
 - 6. NOTES
- 6.1 <u>Intended use</u>. Microcircuits conforming to this drawing are intended for use for Government microcircuit applications (original equipment), design applications, and logistics purposes.
- 6.1.1 Replaceability. Microcircuits covered by this drawing will replace the same generic device covered by a contractor-prepared specification or drawing.
 - b.1.2 Substitutability. Device classes B and Q devices will replace device class M devices.
- 6.2 Configuration control of SMD's. All proposed changes to existing SMD's will be coordinated with the users of record for the individual documents. This coordination will be accomplished in accordance with MIL-STD-481 using DD Form 1693, Engineering Change Proposal (Short Form).
- o.3 Record of users. Military and industrial users shall inform Defense Electronics Supply Center when a system application requires configuration control and which SMD's are applicable to that system. DESC will maintain a record of users and this list will be used for coordination and distribution of changes to the drawings. Users of drawings covering microelectronic devices (FSC 5962) should contact DESC-ECS, telephone (513) 296-6022.
- 6.4 Comments. Comments on this drawing should be directed to DESC-ECS, Dayton, Ohio 45444, or telephone (513) 296-5375.
 - 6.5 Symbols, definitions, and functional descriptions.

GND	 Ground zero voltage potential.
1 _{CC}	 Quiescent supply current.
I_{IL}	 Input current low.
IIL	 Input current high.
TC	 Case temperature.
TΔ	 Ambient temperature.
ACC.	 Positive supply voltage.
CIN	 Input terminal-to-GND capacitance.
COUT	 Output terminal-to-GND capacitance.

		REVISION LEVEL		SHEET 1

6.0 One part - one part number system. The one part - one part number system described below has been developed to allow for transitions between identical generic devices covered by the four major microcircuit requirements documents (MIL-M-38510, MIL-H-38534, MIL-I-38535, and 1.2.1 of MIL-STD-883) without the necessity for the generation of unique PIN's. The four military requirements documents represent different class levels, and previously when a device manufacturer upgraded military product from one class level to another, the benefits of the upgraded product were unavailable to the Original Equipment Manufacturer (OEM), that was contractually locked into the original unique PIN. By establishing a one part number system covering all four documents, the OEM can acquire to the highest class level available for a given generic device to meet system needs without modifying the original contract parts selection criteria.

Maria de la companya	Example PIN	Manufacturing	Document
Military documentation format	under new system	source listing	listing
New MIL-M-38510 Military Detail Specifications (in the SMD format)	5962-XXXXXZZ(B or S)YY	QPL-38510 (Part 1 or 2)	MIL-BUL-103
New MIL-H-38534 Standardized Military Drawings	5962-XXXXXZZ(H or K)YY	QML-38534	MIL-BUL-103
New MIL-I-38535 Standardized Military Drawings	5962-XXXXXZZ(Q or V)YY	QML - 38535	MIL-BUL-103
New 1.2.1 of MIL-STD-883 Standardized Military Drawings	5962-XXXXXZZ(M)YY	MIL-BUL-103	MIL-BUL-103

- 6.7 Sources of supply.
- 6.7.1 Sources of supply for device classes B and S. Sources of supply for device classes B and S are listed in QPL-36510.
- 6.7.2 Sources of supply for device classes Q and V. Sources of supply for device classes Q and V are listed in QML-38535. The vendors listed in QML-38535 have submitted a certificate of compliance (see 3.0 herein) to DESC-ECS and have agreed to this drawing.
- 6.7.3 Approved sources of supply for device class M. Approved sources of supply for class M are listed in $\overline{\text{MIL-BUL-103}}$. The vendors listed in $\overline{\text{MIL-BUL-103}}$ have agreed to this drawing and a certificate of compliance (see 3.6 herein) has been submitted to and accepted by DESC-ECS.
