## 54F/74F583 4-Bit BCD Adder

### General Description

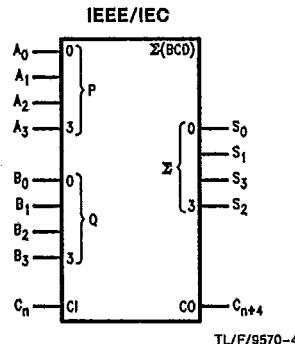

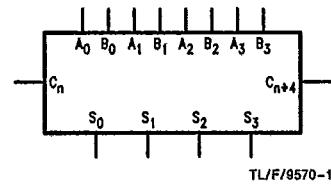

The 'F583 high-speed 4-bit, BCD full adder with internal carry lookahead accepts two 4-bit decimal numbers ( $A_0-A_3$ ,  $B_0-B_3$ ) and a Carry Input ( $C_n$ ). It generates the decimal sum outputs ( $S_0-S_3$ ), and a Carry Output ( $C_{n+4}$ ) if the sum is greater than 9. The 'F583 is the functional equivalent of the 82S83.

### Features

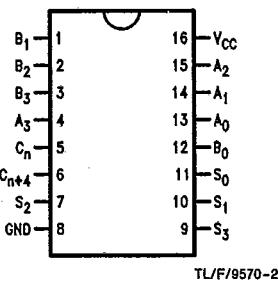

- Adds two decimal numbers
- Full internal lookahead
- Fast ripple carry for economical expansion
- Sum output delay time 16.5 ns max
- Ripple carry delay time 8.5 ns max
- Input to ripple delay time 14.0 ns max
- Supply current 60 mA max
- Available in SOIC, (300 mil only)

**Ordering Code:** See Section 5

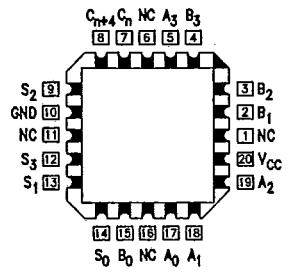

### Logic Symbols

Pin Assignment for  
DIP, SOIC and Flatpak

Pin Assignment  
for LCC

### Connection Diagrams

## Functional Description

The 'F583 4-bit binary coded (BCD) full adder performs the addition of two decimal numbers ( $A_0-A_3, B_0-B_3$ ). The look-ahead generates the BCD carry terms internally, allowing the 'F583 to then do BCD addition correctly. For BCD numbers 0 through 9 at A and B inputs, the BCD sum forms at the output. In the addition of two BCD numbers totalling a number greater than 9, a valid BCD number and a carry will result.

For input values larger than 9, the number is converted from binary to BCD. Binary to BCD conversion occurs by grounding one set of inputs,  $A_n$  or  $B_n$ , and applying any 4-bit binary number to the other set of inputs. If the input is between 0 and 9, a BCD number occurs at the output. If the binary input falls between 10 and 15, a carry term is generated. Both the carry term and the sum are the BCD equivalent of the binary input. Converting binary numbers greater than 16 may be achieved through cascading 'F583s.

## Logic Diagram

TL/F/9570-5

Please note that this diagram is provided only for the understanding of logic operations and should not be used to estimate propagation delays.

**Absolute Maximum Ratings** (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Storage Temperature  $-65^{\circ}\text{C}$  to  $+150^{\circ}\text{C}$

Ambient Temperature under Bias  $-55^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$

Junction Temperature under Bias  $-55^{\circ}\text{C}$  to  $+175^{\circ}\text{C}$

$V_{CC}$  Pin Potential to Ground Pin  $-0.5\text{V}$  to  $+7.0\text{V}$

Input Voltage (Note 2)  $-0.5\text{V}$  to  $+7.0\text{V}$

Input Current (Note 2)  $-30\text{ mA}$  to  $+5.0\text{ mA}$

Voltage Applied to Output in HIGH State (with  $V_{CC} = 0\text{V}$ )  $-0.5\text{V}$  to  $V_{CC}$

Standard Output  $-0.5\text{V}$  to  $+5.5\text{V}$

TRI-STATE® Output  $-0.5\text{V}$  to  $+5.5\text{V}$

Current Applied to Output in LOW State (Max) twice the rated  $I_{OL}$  (mA)

Note 1: Absolute maximum ratings are values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

Note 2: Either voltage limit or current limit is sufficient to protect inputs.

**Recommended Operating Conditions**

Free Air Ambient Temperature

$-55^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$

$0^{\circ}\text{C}$  to  $+70^{\circ}\text{C}$

Supply Voltage

$+4.5\text{V}$  to  $+5.5\text{V}$

$+4.5\text{V}$  to  $+5.5\text{V}$

**DC Electrical Characteristics**
