FAST 74F283
4-Bit Binary Full Adder With Fast Carry

TYPE	TYPICAL PROPAGATION DELAY	TYPICAL SUPPLY CURRENT (TOTAL)
74F283	6.5ns	40mA

FEATURES

- **High speed 4-bit binary addition**
- **Cascadable in 4-bit increments**
- **Fast internal carry look-ahead**

ORDERING INFORMATION

PACKAGES	COMMERCIAL RANGE $V_{CC} = 5V \pm 10\%; T_A = 0°C$ to $+70°C$
16-Pin Plastic DIP	N74F283N
16-Pin Plastic SO	N74F283D

DESCRIPTION

The 74F283 adds two 4-bit binary words (A_n plus B_n) plus the incoming carry. The binary sum appears on the sum outputs ($\Sigma_0 - \Sigma_3$) and the outgoing carry (C_{OUT}) according to the equation:

$C_{IN} + 2^0(A_0 + B_0) + 2^1(A_1 + B_1) + 2^2(A_2 + B_2) + 2^3(A_3 + B_3)$

$= \Sigma_0 + 2\Sigma_1 + 4\Sigma_2 + 8\Sigma_3 + 16C_{OUT}$

where (+) = plus

Due to the symmetry of the binary add function, the 'F283 can be used with either all active-High operands (positive logic) or with all active-Low operands (negative logic). See Function Table. In case of all active-Low operands (negative logic) the results $\Sigma_1 - \Sigma_4$ and C_{OUT} should be interpreted also as active-Low. With active-High inputs, C_{IN} cannot be left open; it must be held Low when no "carry in" is intended. Interchanging inputs of equal weight does not affect the operation, thus A_0, B_0, C_{IN} can arbitraily be assigned to pins 5, 6, 7, etc.

INPUT AND OUTPUT LOADING AND FAN-OUT TABLE

| PINS	DESCRIPTION	74F(U.L.) HIGH/LOW	LOAD VALUE HIGH/LOW
$A_0 - A_3$	A operand inputs	1.0/2.0	20μA/1.2mA
$B_0 - B_3$	B operand inputs	1.0/2.0	20μA/1.2mA
C_{IN}	Carry input	1.0/1.0	20μA/0.6mA
C_{OUT}	Carry output	50/33	1.0mA/20mA
$\Sigma_0 - \Sigma_3$	Sum outputs	50/33	1.0mA/20mA

NOTE:
One (1.0) FAST Unit Load is defined as: 20μA in the High state and 0.6mA in the Low state.

4-Bit Adder

FAST 74F283

Due to pin limitations, the intermediate carries of the 'F283 are not brought out for use as inputs or outputs. However, other means can be used to effectively insert a carry into, or bring a carry out from, an intermediate stage.

Figure a shows how to make a 3-bit adder. Tying the operand inputs of the fourth adder (A_3, B_3) Low makes Σ_3 dependent only on, and equal to, the carry from the third adder. Using somewhat the same principle, Figure b shows a way of dividing the 'F283 into a 2-bit and a 1-bit adder. The third stage adder (A_2, B_2, Σ_2) is used as means of getting a carry (C_{10}) signal into the fourth stage adder (via A_2 and B_2) and bringing out the carry from the second stage on Σ_2. Note that as long as A_2 and B_2 are the same, whether High or Low, they do not influence Σ_2. Similarly, when A_2 and B_2 are the same, the carry into the third stage does not influence the carry out of the third stage.

Figure c shows a method of implementing a 5-input encoder where the inputs are equally weighted. The outputs Σ_0, Σ_1 and Σ_2 present a binary number equal to the number of inputs $I_0 - I_4$ that are true. Figure d shows one method of implementing a 5-input majority gate. When three or more of the inputs $I_0 - I_4$ are true, the output M_4 is true.

I_{CC}	Supply current (total)[4]	V_{CC} = MAX			40	55	mA

NOTES:
1. For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions for the applicable type.
2. All typical values are at V_{CC} = 5V, T_A = 25°C.
3. Not more than one output should be shorted at a time. For testing I_{OS}, the use of high-speed test apparatus and/or sample-and-hold techniques are preferable in order to minimize internal heating and more accurately reflect operational values. Otherwise, prolonged shorting of a High output may raise the chip temperature well above normal and thereby cause invalid readings in other parameter tests. In any sequence of parameter tests, I_{OS} tests should be performed last.
4. I_{CC} should be measured with all outputs open and the following conditions:
   Condition 1: all inputs grounded
   Condition 2: all B intputs Low, other inputs at 4.5V
   Condition 3: all inputs at 4.5V

TAPE AND REEL PACKAGING

SPECIFICATIONS

Tape and Reel specifications conform to Electronic Industries Association (EIA) Proposed Specification #EIA-481-A using 13 inch reels. Current incremental quantities reflect the quantities per reel. As more customers are able to handle a larger quantity per reel, this quantity will be increased.

DEVICE AVAILABILITY

Products available in tape and reel packaging are identified in the Price Book with a "T" suffix to the basic part number and are only offered as a product for sale by the reel. Return of product is limited to full reels with unbroken quality seals.
