

54F/74F2620 • 54F/74F2623 Inverting Octal Bus Transceiver with 25Ω Series Resistors in the Outputs

General Description

These devices are octal bus transceivers designed for asynchronous two-way data flow between the A and B busses. These devices are functionally equivalent to the 'F620 and 'F623. The 25Ω series resistors in the outputs reduce ringing and eliminate the need for external resistors. Both busses are capable of sinking 12 mA, sourcing 15 mA, and have TRI-STATE outputs. Dual enable pins (GAB, $\overline{\text{G}}\text{BA}$) allow data transmission from the A bus to the B bus or from the B bus to the A bus. The 'F2620 is an inverting option of the 'F2623.

Features

- 25Ω series resistors in the outputs eliminate the need for external resistors.
- Designed for asynchronous two-way data flow between busses
- Outputs sink 12 mA and source 15 mA
- Dual enable inputs control direction of data flow
- Guaranteed 4000V minimum ESD protection
- 'F2620 is an inverting option of the 'F2623

Functional Description

The enable inputs $\overline{\text{GAB}}$ and $\overline{\text{GBA}}$ control whether data is transmitted from the A bus to the B bus or from the B bus to the A bus. If both $\overline{\text{GBA}}$ and $\overline{\text{GAB}}$ are disabled ($\overline{\text{GBA}}$ HIGH and $\overline{\text{GAB}}$ low), the outputs are in the high impedance state and data is stored at the A and B busses. When $\overline{\text{GBA}}$ is active (LOW), B data is sent to the A bus. When $\overline{\text{GAB}}$ is active (HIGH), data from the A bus is sent to the B bus. If both enable inputs are active ($\overline{\text{GBA}}$ LOW and $\overline{\text{GAB}}$ HIGH) B data is sent to the A bus while A data is sent to the B bus.

Function Table

Enable Inputs		Operation	
$\overline{\text{GBA}}$	$\overline{\text{GAB}}$	'F2620	'F2623
L	L	$\overline{\text{B}}$ Data to A Bus	B Data to A Bus

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Storage Temperature	–65°C to +150°C
Ambient Temperature under Bias	–55°C to +125°C
Junction Temperature under Bias	–55°C to +175°C

Input Voltage (Note 2)	–0.5V to +7.0V
Input Current (Note 2)	–30 mA to +5.0 mA

Note 1: Absolute maximum ratings are values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

Note 2: Either voltage limit or current limit is sufficient to protect inputs.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
