

SKINTOP® BT

With kinking trumpet for additional reliability

SKINTOP® BT with kinking trumpet

The SKINTOP® BT with the trumpet-shaped cable entry is used as a guard for flexible cables and leads. The supply cables to electrical appliances and machines, which are moved in normal use, must be protected against excessive, e.g. as per VDE 0730. This technical requirement is satisfied in the SKINTOP® "range" by the SKINTOP® BT or by the SKINTOP® BS. As with the rest of the SKINTOP® range, the clamping forces have a central strain-relieving effect on the entire cable circumference, - this is particularly important for kinking protection.

Suitable accessories see
page 406.

Technical Data

Material:
body: polyamid
Seals: Neoprene (CR)

Standard colour:
silver grey (RAL 7001)

Temperature range:
-20 °C to +80 °C

Protection class: IP 68

Note:
Special colours on request
