

## Desolderers

These tools can be operated single handed. Used with the soldering iron it removes by suction all the solder from around the joint, allowing exchange of components.

Cat No	Uses	Replacement nozzle no.
DS10	Fine work	DSN10
DS11	General work	DSN11

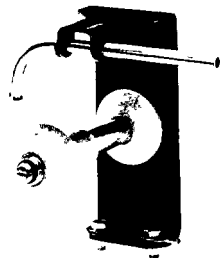

## Solder dispenser SD-1000

419-606.

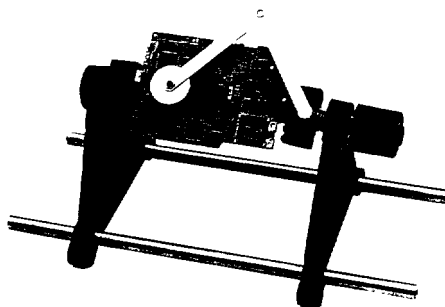

Keeps working area tidy and reduces solder wastage. The solder wire is led from the solder dispenser through a guiding tube. The SD-1000 can be positioned for the soldering job in such a way that the hands of the operator are free for the soldering iron and the component to be soldered.

## ABW-2 Extension for SD-1000

The addition of this stand to the SD-1000 solder dispenser allows 2 reels of solder to be mounted simultaneously.

## ESF-120 Circuit board vice holder - antistatic

The versatility of this PCB holder offers the user a third hand. The workpiece, which is held in place by spring clamps, can be rotated through 360° in increments of 15° allowing work to be performed at any convenient angle. Components are held in place by a cushioned arm. Or through hole boards the component can be placed in the PCB and soldered from the opposite side. A firm work surface is assured by a well positioned centre of gravity and built-in rubber feet. The jaws take a maximum size board of double euro size (160 x 235 mm) and offers many possibilities for holding different shaped components, connectors, soldering strips etc.
