LG-020WK-DT-J-N1

DATA SHEET

DOC. NO : QW0905-LG-020WK-DT-J-N1

REV. : A

DATE : 13 - Oct. - 2006

**Features:**

1. Side view white LED.
2. white SMT package.
3. Leadframe package with individual 2 pin.
4. Wide viewing angle.
5. Soldering methods: IR reflow soldering.
6. Feature of the device: more light due to higher optical efficiency; extremely wide viewing angle; ideal for backlighting and coupling in light guide.
7. ESD protection.
8. Pb free

Descriptions:

The LG-020 SMD has wide viewing angle, low power consumption and white LEDs are devices which are materialized by combining blue LEDs and special phosphors. This feature makes the LED ideal for light guide application.

Applications:

1. LCD back light.
2. Mobile phones.
3. Indicators.
4. Switch lights.

4. CARTON SIZE : L X W X H 49cm X 46cm x 29cm

**Soldering Iron:**

Basic spec is 5 seconds when 260 .

Power dissipation of iron should be smaller than 25W, and temperature should be controllable.

Surface temperature of the device should be under 280 for 3 seconds.

Reflow Temp/Time(Pb-free)**Reflow Temp/Time(Lead solder)****Note:**

- 1.Reflow soldering should not be done more than two times.
- 2.When soldering, do not put stress on the LEDs during heating.
- 3.After soldering, do not warp the circuit board.

**Precautions For Use:****Storage time:**

- 1.The operation of Temperatures and RH are : 5 ~35 ,RH60%.
- 2.Once the package is opened, the products should be used within a week.
Otherwise, they should be kept in a damp proof box with descanting agent.
Considering the tape life, we suggest our customers to use our products within a year(from production date).
- 3.If opened more than one week in an atmosphere 5 ~ 35 ,RH60%,
they should be treated at 60 ±5 for 15hrs.

Drive Method:

LED is a current operated device, and therefore, requires some kind of current limiting incorporated into the driver circuit. This current limiting typically takes the form of a current limiting resistor placed in series with the LED.

Consider worst case voltage variations that could occur across the current limiting resistor. The forward current should not be allowed to change by more than 40 % of its desired value.

Circuit model A

Circuit model B

(A) Recommended circuit.

(B) The difference of brightness between LED could be found due to the VF-IF characteristics of LED.

Cleaning:

Use alcohol-based cleaning solvents such as isopropyl alcohol to clean the LED.

ESD(Electrostatic Discharge):

Static Electricity or power surge will damage the LED. Use of a conductive wrist band or anti-electrostatic glove is recommended when handling these LED. All devices, equipment and machinery must be properly grounded.

Reliability Test:

(1)Test items and results

Classification	Test Item	Test Condition	Sample Size
