

AP1510

PWM Control 3A Step-Down Converter

■ Features

- Input voltage: 3.6V to 23V.
- Output voltage: 0.8V to V_{CC} .
- Duty ratio: 0% to 100% PWM control
- Oscillation frequency: 300KHz typ.
- Soft-start, Current limit, Enable function
- Thermal Shutdown function
- Built-in internal SW P-channel MOS
- SOP-8L **Pb-Free** Package.

■ Applications

- PC Motherboard
- LCD Monitor
- Graphic Card
- DVD-Video Player
- Telecom Equipment
- ADSL Modem
- Printer and other Peripheral Equipment
- Microprocessor core supply
- Networking power supply

■ General Description

AP1510 consists of step-down switching regulator with PWM control. These devices include a reference voltage source, oscillation circuit, error amplifier, internal PMOS and etc.

AP1510 provides low-ripple power, high efficiency, and excellent transient characteristics. The PWM control circuit is able to vary the duty ratio linearly from 0 up to 100%. This converter also contains an error amplifier circuit as well as a soft-start circuit that prevents overshoot at startup. An enable function, an over current protect function and a short circuit protect function are built inside, and when OCP or SCP happens, the operation frequency will be reduced from 300KHz to 30KHz. Also, an internal compensation block is built in to minimum external component count.

With the addition of an internal P-channel Power MOS, a coil, capacitors, and a diode connected externally, these ICs can function as step-down switching regulators. They serve as ideal power supply units for portable devices when coupled with the SOP-8L mini-package, providing such outstanding features as low current consumption. Since this converter can accommodate an input voltage of up to 23V, it is also ideal when operating via an AC adapter.

■ Absolute Maximum Ratings

Symbol	Parameter	Rating	Unit
V_{CC}^{*1}	V_{CC} Pin Voltage	$V_{SS} - 0.3$ to $V_{SS} + 25$	V
V_{FB}	Feedback Pin Voltage	$V_{SS} - 0.3$ to V_{CC}	V
$V_{ON/OFF}^{*1}$	ON/OFF Pin Voltage	$V_{SS} - 0.3$ to $V_{IN} + 0.3$	V
V_{OUTPUT}	Switch Pin Voltage	$V_{SS} - 0.3$ to $V_{IN} + 0.3$	V
P_D	Power Dissipation	Internally limited	mW
T_{OPR}	Operating Temperature Range	-20 to +125	°C
T_{STG}	Storage Temperature Range	-40 to +150	°C

Caution: The absolute maximum ratings are rated values exceeding which the product could suffer physical damage. These values must therefore not be exceeded under any conditions.

■ Function Description

PWM Control

The AP1510 consists of DC/DC converters that employ a pulse-width modulation (PWM) system. In converters of the AP1510, the pulse width varies in a range from 0 to 100, according to the load current, and yet ripple voltage produced by the switching can easily be removed through a filter because the switching frequency remains constant. Therefore, these converters provide a low-ripple power over broad ranges of input voltage and load current.

Under Voltage Lockout

The under voltage lockout circuit of the AP1510 assures that the high-side MOSFET driver outputs remain in the off state whenever the supply voltage drops below set parameters. Lockout occurs if V_{CC} falls below 3.3V. Normal operation resumes once V_{CC} rises above 3.5V.

$R_{DS(ON)}$ Current Limiting

The current limit threshold is setting by connecting an external resistor from V_{CC} supply to OCSET. The voltage drop across this resistor is due to the 100uA internal sink sets the voltage at the pin. When the PWM voltage is less than the voltage at OCSET, an over-current condition occurs.
