

TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

# TC74HC688AP, TC74HC688AF

## 8 - BIT EQUALITY COMPARATOR

The TC74HC688A is a high speed CMOS 8-BIT EQUALITY COMPARATOR fabricated with silicon gate C<sup>2</sup>MOS technology.

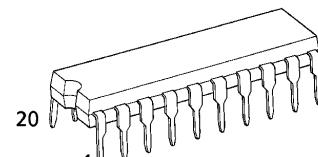

It achieves the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.

The TC74HC688A compares two 8-bit binary or BCD words applied inputs P0~P7, and inputs Q0~Q7, and indicates whether or not they are equal.

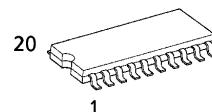

A signal active low enable is provided to facilitate cascading of several packages to compare of words greater than 8bits. All inputs are equipped with protection circuits against static discharge or transient excess voltage.
