

## 74LVT2244 3.3V ABT Octal Buffer/Line Driver with TRI-STATE® Outputs

### General Description

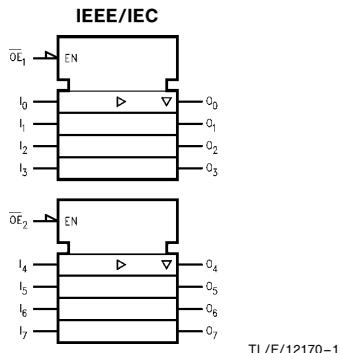

The LVT2244 is an octal buffer and line driver designed to be employed as a memory address driver, clock driver and bus oriented transmitter or receiver which provides improved PC board density. The equivalent  $25\Omega$ -Series resistor helps reduce output overshoot and undershoot.

These octal buffers and line drivers are designed for low-voltage (3.3V)  $V_{CC}$  applications, but with the capability to provide a TTL interface to a 5V environment. The LVT2244 is fabricated with an advanced BiCMOS technology to achieve high speed operation similar to 5V ABT while maintaining a low power dissipation.

### Features

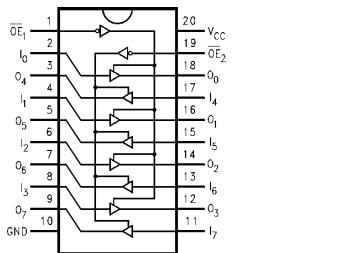

- Input and output interface capability to systems at 5V  $V_{CC}$
- Bus-Hold data inputs eliminate the need for external pull-up resistors to hold unused inputs
- Equivalent  $25\Omega$ -Series resistor on outputs
- Live insertion/extraction permitted
- Power Up/Down high impedance provides glitch-free bus loading
- Outputs source/sink -12 mA/+12 mA
- Available in SOIC JEDEC, SOIC EIAJ, TSSOP and SSOPII
- Latch-up performance exceeds 500 mA
