

GENERAL DESCRIPTION

The ICS840011 is a Fibre Channel Clock Generator and a member of the HiPerClocks™ family of high performance devices from ICS. The ICS840011 uses a 26.5625MHz or 25MHz crystal to synthesize 106.25MHz or 100MHz respectively. The ICS840011 has excellent phase jitter performance, from 637KHz – 10MHz integration range. The ICS840011 is packaged in a small 8-pin TSSOP, making it ideal for use in systems with limited board space.

POWER SUPPLY FILTERING TECHNIQUES

As in any high speed analog circuitry, the power supply pins are vulnerable to random noise. The ICS840011 provides separate power supplies to isolate any high switching noise from the outputs to the internal PLL. V_{DD} , and V_{DDA} should be individually connected to the power supply plane through vias, and bypass capacitors should be used for each pin. To achieve optimum jitter performance, power supply isolation is required. *Figure 1* illustrates how a 10Ω resistor along with a $10\mu F$ and a $.01\mu F$ bypass capacitor should be connected to each V_{DDA} pin.

CRYSTAL INPUT INTERFACE

The ICS840011 has been characterized with 18pF parallel resonant crystals. The capacitor values, C1 and C2, shown in *Figure 2* below were determined using a 26.5625MHz, 18pF

parallel resonant crystal and were chosen to minimize the ppm error. The optimum C1 and C2 values can be slightly adjusted for different board layouts.

APPLICATION SCHEMATIC

Figure 3A shows a schematic example of the ICS840011. An example of LVCMOS termination is shown in this schematic. Additional LVCMOS termination approaches are shown in the LVCMOS Termination Application Note. In this example, an 18pF parallel resonant 26.5625MHz crystal is used for generating

106.25MHz output frequency. The C1 = 27pF and C2 = 33pF are recommended for frequency accuracy. For different board layout, the C1 and C2 values may be slightly adjusted for optimizing frequency accuracy.

PC BOARD LAYOUT EXAMPLE

Figure 3B shows an example of P.C. board layout. The crystal X1 footprint in this example allows either surface mount (HC49S) or through hole (HC49) package. C3 is 0805. C1 and C2 are

0402. Other resistors and capacitors are 0603. This layout assumes that the board has clean analog power and ground planes.
