MSM531601D

2,097,152-Word x 8-Bit Mask ROM

DESCRIPTION

The OKI MSM531601D is a high-speed silicon gate CMOS Mask ROM with 2,097,152-word x 8-bit capacity. The MSM531601D operates on a single 5.0 V power supply and is TTL compatible. The chip's asynchronous I/O requires no external clock assuring easy operation. A power-down mode provides low power dissipation when the chip is not selected. The CE and OE pins provide control signals permitting the output to be three-stated, allowing easy memory expansion on a system bus. The MSM531601D is suited for use as large capacity fixed memory for microcomputers and data terminals.

1. Input signal level: $V_{IH} = 2.4 \text{ V}$, $V_{IL} = 0.6 \text{ V}$. AC measurements assume $t_r = t_f = 5 \text{ ns}$. Timing reference level: $V_{IN} = 1.5 \text{ V}$, $V_{OUT} = 0.8 \text{ V}$ & 2.0 V .

2. t_{CHZ} and t_{OHZ} define the time at which the output achieves an open circuit condition and are not referenced to output voltage levels.
