## VOLTAGE DETECTOR

## **S-806 Series**

The S-806 Series is a non-adjusting voltage detector made using a CMOS process. The voltage detectors are composed of a high-precision and low power consumption standard voltage source, a comparator, a hysteresis circuit, and an output driver. The detection voltage is fixed internally, and the output form is Nch open-drain. This series has various product line up.

## ■ Features

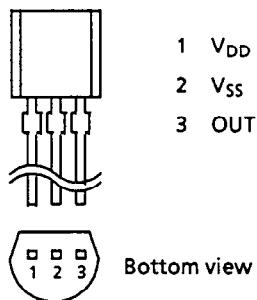

- Low current consumption 10.0  $\mu$ A typ. ( $V_{DD} = 6.0$  V)
  - High-stable standard voltage source built-in 0.8 V typ.
  - Good hysteresis characteristics 208 mV typ. (S-806D)
  - Good temperature characteristic of detection voltage  $\pm 0.52$  mV/ $^{\circ}$ C typ. (S-806D)
  - TO-92 plastic packages

## ■ Applications

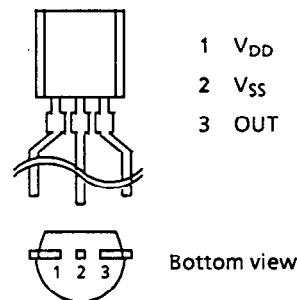

- Battery checker
  - Level selector
  - Battery backup for memories
  - Power failure detector
  - Reset for microcomputer, etc.
  - Store signal detector for NV-RAM

## ■ Pin Arrangement

#### ■ Notes

- Since there are projection and resin burr on roots of lead terminals formed at Tiebar-cut in TO-92 products, do not solder on them.
