

TOSHIBA BIPOLAR LINEAR INTEGRATED CIRCUIT SILICON MONOLITHIC

**TA8884AN****RGB PROCESSOR IC**

The TA8884AN is an RGB processor IC for digital-analog system color TV. TA8884AN organizes digital-analog TV system by combined with TC90A02F or TC90A06F (Digital VCD IC : TOSHIBA Product). Input signals are Luminance signal and color difference signals which have been demodulated by digital IC. And RGB primary color signals are outputted.

TA8884AN contains I<sup>2</sup>C bus, so various control and setting of various function can be digital-controlled through the bus line.

**FEATURES****Video stage**

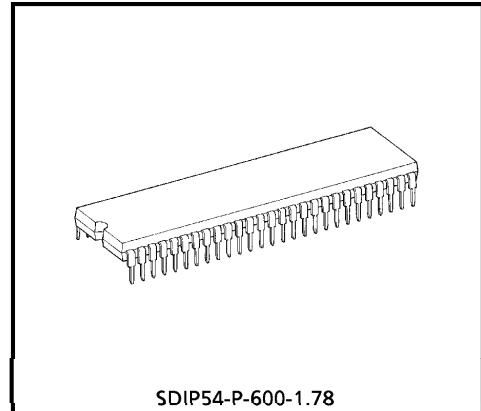

- Super real transient
- Black expansion
- Luminance  $\gamma$  correction
- High-bright color
- DC restoration

**Chroma stage**

- Output of primary color signals
- Cut-off, drive adjustment
- Color detail emphasis
- Changing of relative phase and relative amplitude
- Color  $\gamma$  correction
- Automatic correction of flesh tone
- ACC circuit

**RGB stage**

- On screen display interface
- Analog RGB interface
- Fast blanking

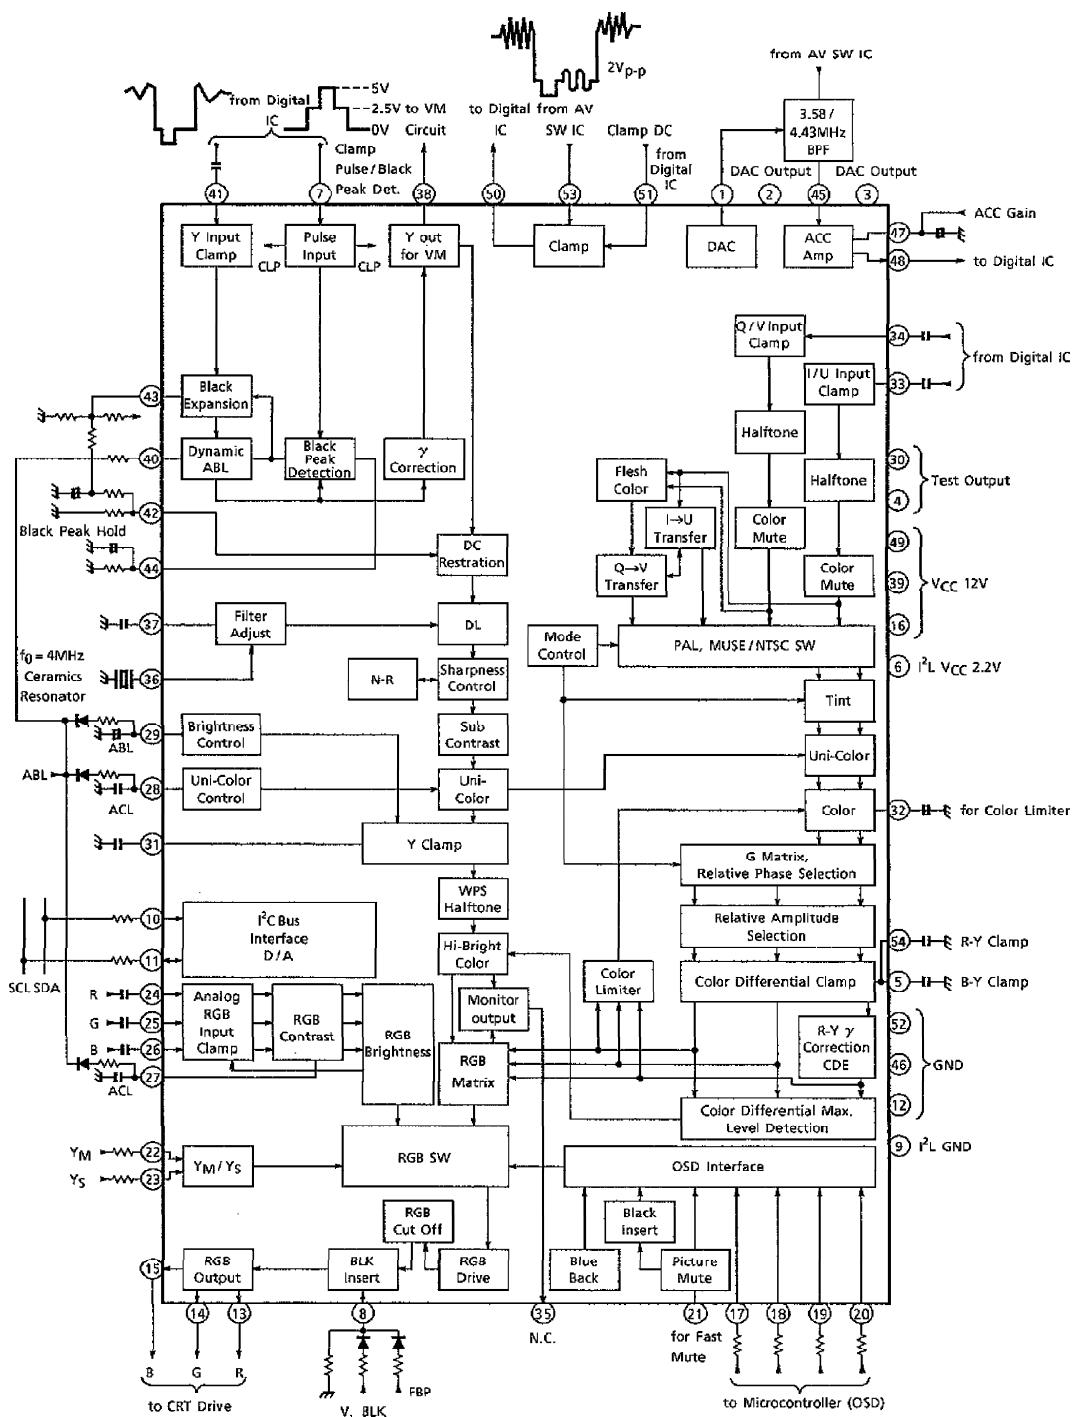

SDIP54-P-600-1.78

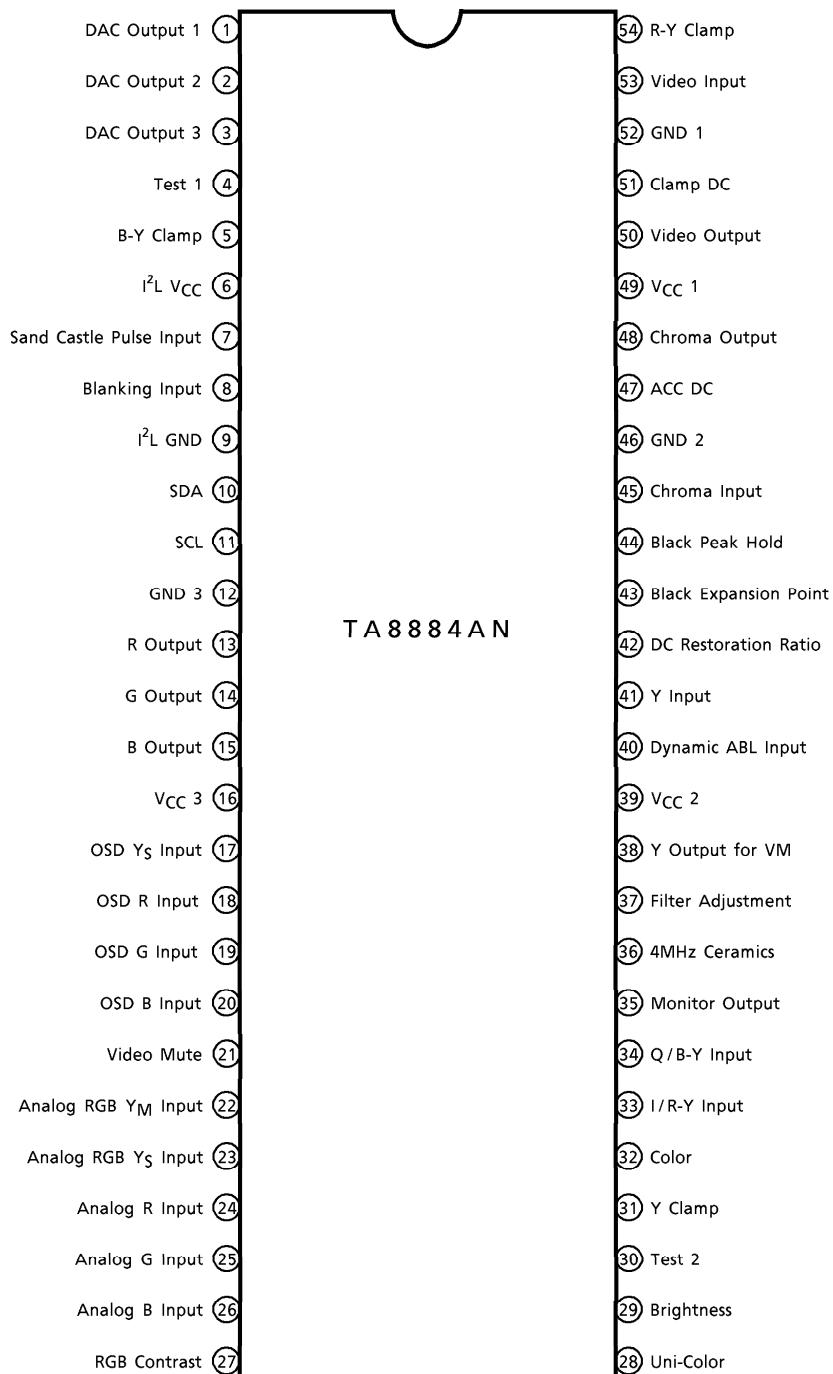

Weight : 5.44g (Typ.)

- 961001EBA2
- TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.
  - The products described in this document are subject to foreign exchange and foreign trade control laws.
  - The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
  - The information contained herein is subject to change without notice.

## BLOCK DIAGRAM

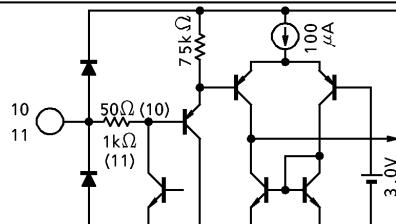

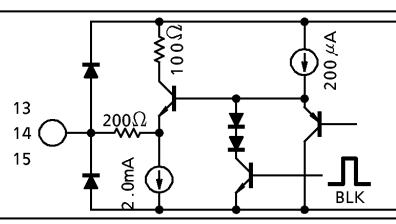

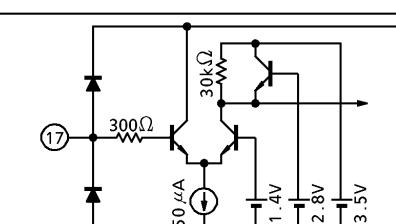

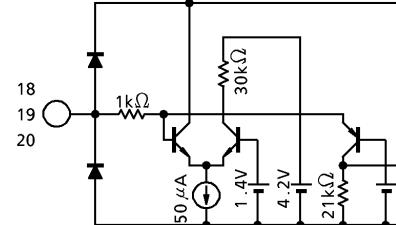

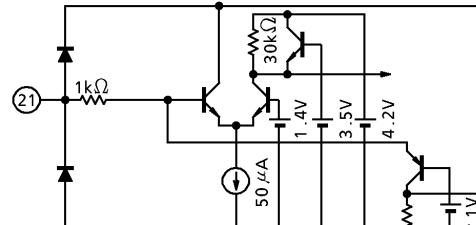

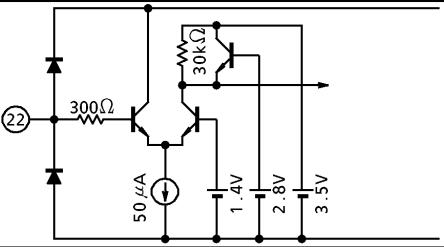

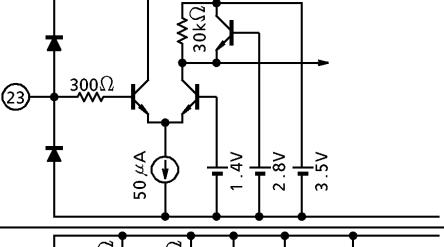

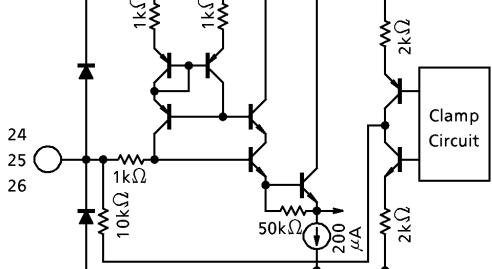

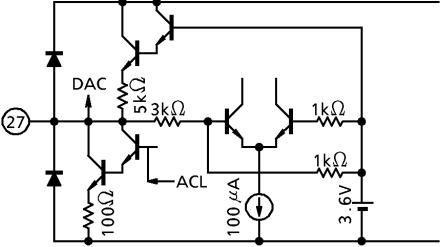

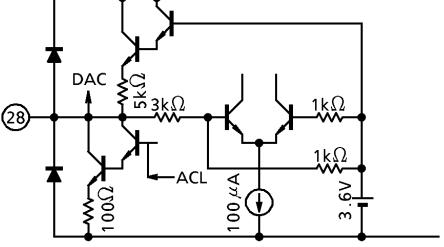

## TERMINAL CONNECTION DIAGRAM

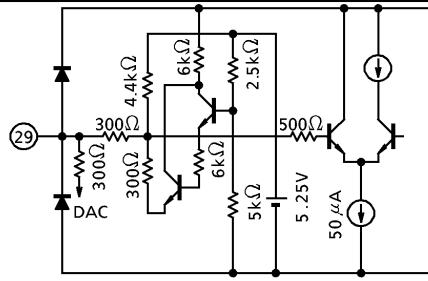

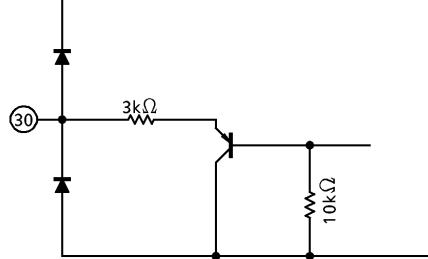

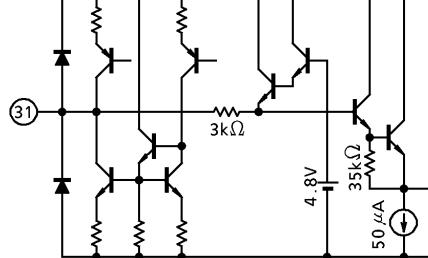

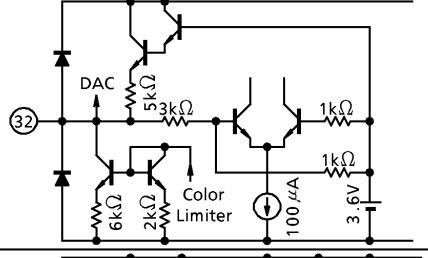

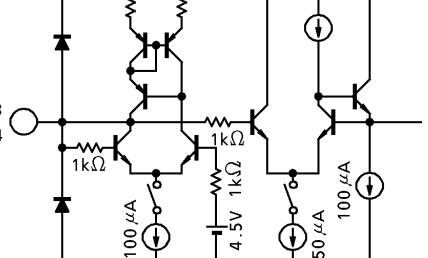

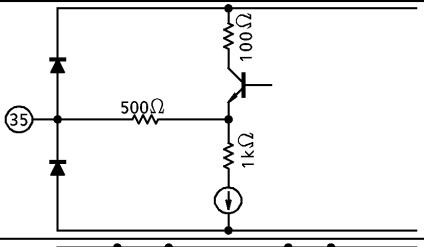

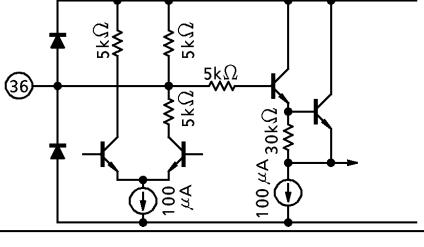

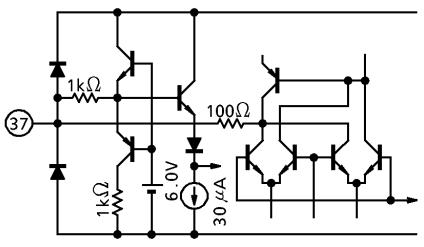

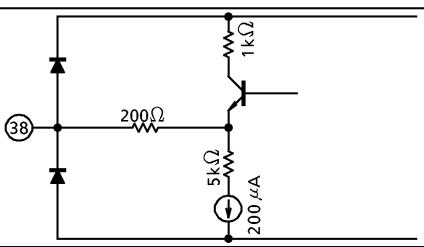

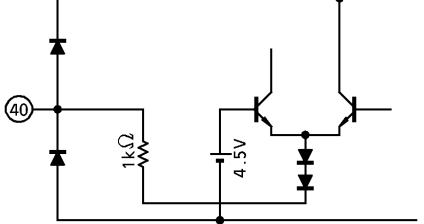

## TERMINAL FUNCTION

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
1 2 3	DAC Output 1 DAC Output 2 DAC Output 3	The terminals for 1 bit DAC output. Controlled by I <sup>2</sup> C bus. When the data is "1", this terminal's voltage is 0V.	
4	Test 1	The terminal for test of this IC. Please use this IC with this terminal open.	
5 54	B-Y Clamp R-Y Clamp	The terminals for a filter to clamp R-Y and B-Y signals. Pedestal levels of R-Y, B-Y and G-Y signal are made equal by the internal clamping circuit.	
6	I <sup>2</sup> L V <sub>CC</sub>	V <sub>CC</sub> of I <sup>2</sup> L circuit. Please supply 2.2V to this terminal.	—
7	Sand Castle Pulse Input	The terminal for input of sand castle pulse (Black peak detection pulse + clamp pulse). Threshold levels of B.P.D pulse and C. pulse are 2.1V and 3.5V.	
8	Blanking Pulse Input	The terminal for input of horizontal and vertical blanking pulse. Threshold levels of H.B. pulse and V.B. pulse are 4.0V and 1.4V.	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
9	I <sup>2</sup> L GND	Ground of I <sup>2</sup> L circuit.	—
10 11	SDA SCL	The terminals for I <sup>2</sup> C bus input and output. Input threshold level is 2.3V.	
12	GND 3	Ground of RGB interface part, color-difference demodulation circuit and Digital / Analog Convertor.	—
13 14 15	R Output G Output B Output	The terminals for output of RGB primary color signals. Horizontal and vertical blanking signals are mixed with RGB signals.	
16	V <sub>CC</sub> 3	V <sub>CC</sub> of RGB interface part, color-difference demodulation circuit and Digital / Analog Convertor. Please supply 12V to this terminal.	—
17	OSD Y <sub>S</sub> Input	The terminals for input of fast blanking signal for On Screen Display. Threshold level is 1.4V.	
18 19 20	OSD R Input OSD G Input OSD B Input	The terminals for input of RGB signals for OSD. Threshold levels are 1.4V. If Terminal 20 is connected with V <sub>CC</sub> , it is test mode for this IC. Threshold level of test mode is V <sub>CC</sub> - 0.7V.	
21	Video Mute	The terminal for input a signal to mute the video signal when combining this IC with AKB IC. Threshold levels of video mute (muting TV and Picture In Picture) and TV mute (muting only TV) are 2.8V and 1.4V.	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
22	Analog RGB YM Input	The terminal for input a signal to reduce the contrast of TV signal when Analog RGB signals superimpose upon TV signal. Threshold level is 1.4V.	
23	Analog RGB YS Input	The terminal for input of fast blanking signal for Analog RGB. Threshold level is 1.4V.	
24 25 26	Analog R Input Analog G Input Analog B Input	The terminals for input of Analog RGB signals. These are clamped by internal clamping circuit. Recommendable input levels are 1.0V <sub>p-p</sub> .	
27	RGB Contrast	The terminal to control the contrast of Analog RGB signals.	
28	Uni-Color	The terminal for output of DAC to adjust Uni-Color and also for input of Automatic Contrast Limiter.	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
29	Brightness	The terminal for output of DAC to adjust Brightness and also for input of Automatic Brightness Limiter.	
30	Test 2	The terminal for test of this IC. If this terminal is connected with VCC, it is the test mode for this IC. Please use this IC with this terminal connected to GND.	
31	Y Clamp	The terminal for a filter to clamp Y signal. It is impossible to change DC restoration ratio by brightness control circuit because it is compensated by pin 42. It is fixed to 100%.	
32	Color	The terminal to fix time constant of Color Limiter. Please connect capacitor to this terminal.	
33 34	I/R-Y Input Q/B-Y Input	The terminals for input of I/R-Y and Q/B-Y signals from digital IC. Please input the signals through capacitors because the signals are clamped to standard voltage at the inside of this IC.	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
35	Monitor Output	The terminal to observe Y, R-Y, B-Y and G-Y signals. The signals are selected by I <sup>2</sup> C bus.	
36	4MHz Ceramics	The terminal for 4MHz Ceramics resonator to adjust internal Delay Line.	
37	Filter Adjustment	The terminal for a filter to adjust delay time of internal Delay Line. The peak frequency of DL aperture correction is 4.0MHz when only capacitor is connected. To insert resistance between this terminal and GND makes peak frequency lower, between this and V <sub>CC</sub> makes it higher.	
38	Y Output for Velocity Modulation	The terminal for output of Y signal to velocity modulation circuit. This Y signal is output after passing black expansion and γ correction circuit.	
39	V <sub>CC</sub> 2	V <sub>CC</sub> of video part and sharpness part. Please give 12V to this terminal.	—
40	Dynamic ABL Input	The terminal to supply control current for Dynamic ABL and Black Peak Level Correction. D. ABL and B.P.L.C. are the functions to shift the level of Y signal toward black side when the most black level is still whitish after black expansion.	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
41	Y Input	The terminal for input of Y signal. Recommendable input level is 1.0V <sub>p-p</sub> (negative Sync). Because the pedestal level of Y signal is clamped at this terminal, please reduce the impedance of signal source.	
42	DC Restoration Ratio	The terminal to correct DC restoration ratio. DC restoration ratio is fixed by following expression. $T_{DC} = \frac{5k\Omega}{5k\Omega + R\Omega} \times 30 + 100 [\%]$ The smaller the external resistance R is, the larger the amount of correction is. With this terminal open, you can monitor the Y signal from which has been removed Sync signal and which has been done black expansion.	
43	Black Expansion Point	The terminal to fix black expansion start point. The higher voltage is supplied, the higher the start point is.	
44	Black Peak Hold	The terminal to control the gain of black expansion and of black level shift for Dynamic ABL. Resistance connected between this terminal and GND makes black expansion change. The smaller the resistance is, the larger the black area is.	
45	Chroma Input	The terminal for input of Chroma signal. Recommendable input level is 50mV <sub>p-p</sub> .	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
46	GND 2	GND of video part and sharpness part.	—
47	ACC DC	The terminal to fix the gain of ACC Amp. The higher voltage is supplied (0~5V), the larger the gain is.	
48	Chroma Output	The terminal for output of Chroma signal which has been input to pin 45 and has passed ACC Amp.	
49	VCC 1	V <sub>CC</sub> of ACC part. Please supply 12V to this terminal.	—
50	Video Output	The terminal for output of Composite Video signal which has been input to pin 53. This signal is output after clamped to the level which is fixed by pin 52's voltage	
51	Clamp DC	The terminal to fix clamping level for Composite Video signal which has been input to pin 53. Please supply 0~5V to this terminal.	
52	GND 1	GND of ACC part.	—
53	Video Input	The terminal for input of Composite Video signal. Recommendable input level is 2V <sub>p-p</sub> .

## CONTENTS OF BUS CONTROL

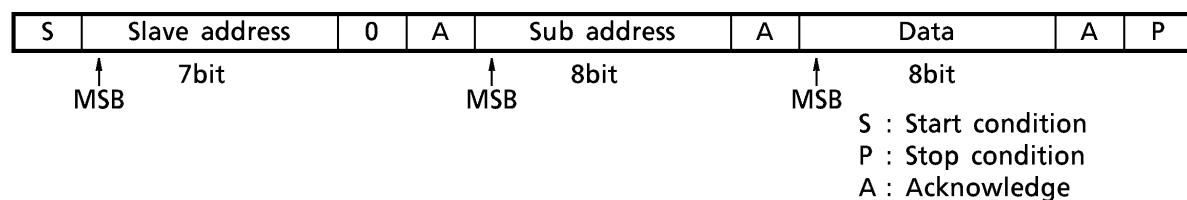

ITEM	SUBSTANCE (MIN.~MAX.)	DE- FAULT
Uni-color (TV)	-18dB~0dB (7bit)	0dB
Brightness (Including Sub)	-1.3V~ +1.3V 10mV / STEP (8bit)	0V
Tint (Including Sub)	-51.2°~ +50.8° 0.4° / STEP (8bit)	0°
Color	-14dB~ +4dB (7bit)	0dB
Brightness Link	0 : OFF (Brightness of RGB is fixed by data of RGB Brightness.) 1 : ON (Brightness of RGB is linked with Brightness of TV.)	OFF
RGB Contrast	-18dB~0dB (Same characteristic as Uni-Color) (7bit)	-5dB
Sub Contrast (TV)	-2dB~ +2dB 0.25dB / STEP (4bit)	0dB
Sharpness Tracking	Correction level of S.R.T when Sharpness is center 00 : -∞ / 01 : -3dB / 10 : 0dB / 11 : +3dB	0dB
Sharpness	-6dB~ +12dB (at 2.4MHz) (7bit)	+6dB
RGB Brightness (Including Sub)	-0.9V~ +0.9V (7bit)	0V
Primary Color Output Cut Off	-0.3V~ +0.7V (Compared with 3V) 4mV / STEP (8bit)	+0.2V
Primary Color Output Drive	The standard is R. -3dB~ +3dB (7bit)	center
OSD Contrast	0 : 2.0V <sub>p-p</sub> / 1 : 2.5V <sub>p-p</sub> (7bit)	2.5V <sub>p-p</sub>
Blue Back ON / OFF	0 : OFF / 1 : 1.2V <sub>p-p</sub>	OFF
High-Bright Color	00 : OFF / 01 : 0.04 / 10 : 0.08 / 11 : 0.12 times	OFF
Flesh Tone ON / OFF	0 : OFF / 1 : ON Drawing to I axis (123°)	OFF
Flesh Tone Pull-in Range	0 : ±34° / 1 : ±18° (Compared with I axis)	±18°
Color Limiter Level	00 : +1dB / 01 : 0dB / 10 : -1dB / 11 : OFF	OFF
Color Temperature Mode Change	0 : ON At all modes, color temperature mode change is on. 1 : OFF At normal TV mode, color temperature mode change is on.	OFF
Y Output Gain For Velocity Modulation	00 : -∞ / 01 : -6dB / 10 : -3dB / 11 : 0dB	0dB
Service	0 : OFF Normal mode 1 : ON RGB output voltage becomes to cut off voltage	OFF
Y-NR Level	00 : 75 IRE (Y-NR Level is 0.) / 01 : 50 IRE / 10 : 25 IRE / 11 : OFF	OFF
γ Correction Start Point	00 : 70 IRE / 01 : 80 IRE / 10 : 90 IRE / 11 : OFF	OFF
Peak ACL ON / OFF	0 : OFF / 1 : ON	OFF
White Peak Slice Level	0 : 95 IRE / 1 : 105 IRE (The standard is cut off voltage)	95 IRE
DAC Output 1	0 : OPEN / 1 : ON	OPEN
Color Detail Emphasis	00 : OFF / 01 : +3dB / 10 : +6dB / 11 : +9dB (max gain) at R-Y	OFF
R-Y Phase	0 : 95° / 1 : 90°	95°
Black Expansion Max. Gain	0 : +3dB / 1 : OFF	+3dB
PAL / NTSC Change	0 : NTSC / 1 : PAL	NTSC
DAC Output 2	0 : OPEN / 1 : ON	OPEN
DAC Output 3	0 : OPEN / 1 : ON	OPEN
Color γ Correction	Positive side of R-Y is corrected. 0 : ON / 1 : OFF	OFF
Video Mute	0 : OFF / 1 : ON	OFF

ITEM	SUBSTANCE (MIN.~MAX.)	DE-FAULT
Color Mute	0 : OFF / 1 : ON	OFF
Color Temperature	0 : OFF / 1 : ON (G : -1dB, B : -2dB)	OFF
Monitor Output	Selection among 00 : G-Y / 01 : R-Y / 10 : B-Y / 11 : Y	G-Y

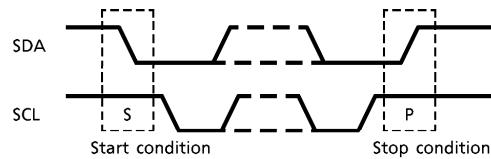

## I<sup>2</sup>C BUS CONTROLLED FORMAT SUMMARY

Bus controlled format of TA8884AN is based on I<sup>2</sup>C Bus control format of Philips.

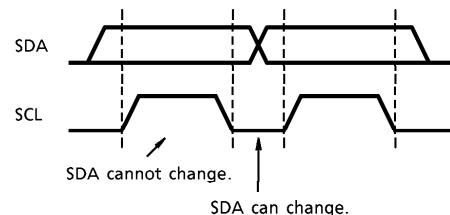

Data transfer format

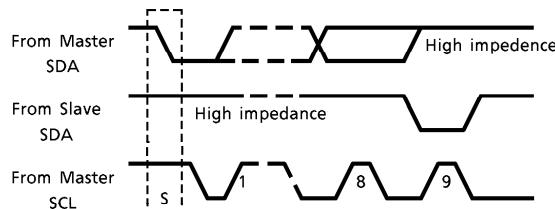

(1) Start and stop condition

(2) Bit transfer

(3) Acknowledge

(4) Slave address

A6	A5	A4	A3	A2	A1	A0	R/W
1	0	0	0	1	0	0	0

Purchase of TOSHIBA I<sup>2</sup>C components conveys a license under the Philips I<sup>2</sup>C Patent Rights to use these components in an I<sup>2</sup>C system, provided that the system conforms to the I<sup>2</sup>C Standard Specification as defined by Philips.

**MAXIMUM RATINGS**

CHARACTERISTIC	SYMBOL	RATING	UNIT
Power Supply Voltage	$V_{CC}$	14.5	V
Input Signal Voltage	$e_{in}$	5.0	$V_{p-p}$
Power Dissipation	$P_D$ (Note)	1920	mW
Operating Temperature	$T_{opr}$	-20~65	°C
Storage Temperature	$T_{stg}$	-55~150	°C

(Note) When using the device at above  $T_a = 25^\circ\text{C}$ , decrease the power dissipation by 15.4mW for each increase of  $1^\circ\text{C}$ .

**RECOMMENDABLE POWER SUPPLY VOLTAGE**

## MEASUREMENT CONDITION

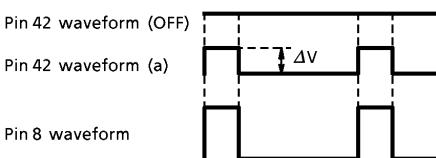

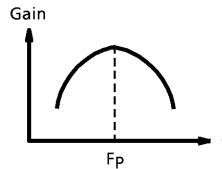

Video stage

NOTE No.	ITEM	SW MODE	MEASUREMENT METHOD (TEST CONDITION : $V_{CC} = 12V$ , $T_a = 25^\circ C$ )
1	Video Gain	SW45 a	(1) Input sine wave of $f = 100\text{kHz}$ , $0.5V_{p-p}$ to pin 53. (2) Measure output amplitude of pin 50 and calculate AC gain from pin 53 to pin 50. [ $G_{V50}$ ]
		SW47 a	
		SW51 a	
		SW53 b	
2	Video Frequency Characteristic	Same as above	(1) Input sine wave of $f = 8\text{MHz}$ , $0.5V_{p-p}$ to pin 53. (2) Measure output amplitude of pin 50 and calculate AC gain from pin 53 to pin 50. [ $G_{V50}$ (8MHz)] (3) Calculate frequency characteristic from $G_{V50}$ and $G_{V50}$ (8MHz). $G_{f50} = 20\log(G_{V50} \text{ (8MHz)} / G_{V50})$
3	Video In / Output Dynamic Range	SW45 a	(1) Connect external supply to pin 53. (2) Measure pin 50 voltage variation when varying external supply. (3) Calculate $DR_{53}$ , $V_{50}^{MAX}$ and $V_{50}^{MIN}$ .
		SW47 a	
		SW51 a	
		SW53 a	
		— —	
4	Video Clamp Characteristic	SW45 a	(1) Connect external supply to pin 51. (2) Measure pin 50 voltage variation when varying external voltage from 0 to 5V. (3) Calculate $DR_{51}$ , $V_{51}^{CNT}$ , $V_{CL}^{MAX}$ and $V_{CL}^{MIN}$ .
		SW47 a	
		SW51 b	
		SW53 a	
		— —	
5	Video Output Drive Current	SW45 a	Measure inflow current to pin 50 when connecting external voltage of 6V to pin 50 via $200\Omega$ resistance. [ $I_{50}$ ]
		SW47 a	
		SW51 a	
		SW53 a	
6	Chroma Output Drive Current	Same as above	Measure inflow current to pin 48 when connecting external voltage of 6V to pin 48 via $200\Omega$ resistance. [ $I_{48}$ ]
7	ACC Characteristics	SW45 b	(1) Connect external supply to pin 47. (2) Input sine wave of $f = 3.58\text{MHz}$ , $50\text{mV}_{p-p}$ to pin 45. (3) Set pin 47 voltage to 0V. (4) Calculate output amplitude of pin 48. (5) Calculate AC gain from pin 45 to pin 48. [ $G_{V48}^{MIN}$ ] (6) Repeat (4) and (5) when setting pin 47 voltage to 2.5V. [ $G_{V48}^{CNT}$ ] (7) Repeat (4) and (5) when setting pin 47 voltage to 5V. [ $G_{V48}^{MAX}$ ]
		SW47 b	
		SW51 a	
		SW53 a	
		— —	

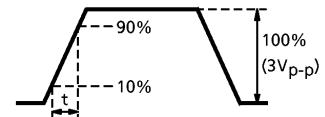

NOTE No.	ITEM	SW MODE	MEASUREMENT METHOD (TEST CONDITION : $V_{CC} = 12V$ , $T_a = 25^\circ C$ )
8	Chroma In / Output Dynamic Range	SW45 b	(1) Repeat (1)~(3) of Note 7. (2) Measure input amplitude when pin 48 output waveform starts to distort while raising input amplitude. [DR45] (3) Set pin 47 to 5V. (4) Measure max. and min. voltage whose outputs are clipped while raising input voltage. [ $V_{48}^{MAX}$ , $V_{48}^{MIN}$ ]
		SW47 b	
		SW51 a	
		SW53 a

84	Analog RGB White Peak Slice Level	Same as above	(1) Input signal 1 ( $f_0 = 10kHz$ , picture period amplitude : $0.3V_{p-p}$ ) to pin 41. Adjust drive adjustment data so that picture period amplitude of pin 14 and 15 can be equal to that of pin 13. (2) Apply external supply of 5V to pin 23. (3) Set the data of RGB contrast to (00) : min. (4) Input signal 2 of diagram 1 to pin 24 and raise picture period amplitude A from 0V slowly. (5) Measure picture period amplitude A when no variation of pin 13 picture period voltage. [ $DR_R$ ] (6) Repeat (3) & (4) when pin 25 (input) pin 14 (measure) [ $DR_G$ ] and pin 26 pin 15 [ $DR_B$ ], likewise.
85	Analog RGB Black Peak Slice Level	Same as above	(1) Input signal 1 ( $f_0 = 10kHz$ , picture period amplitude : $0.3V_{p-p}$ ) to pin 41. Adjust drive adjustment data so that picture period amplitude of pin 14 and 15 can be equal to that of pin 13. (2) Apply external supply 5V from pin 23. (3) Set the data of RGB contrast to (7F) : max. (4) Input signal 2 of diagram 1 to pin 24 and raise picture period amplitude A from 0V slowly. Calculate voltage at which pin 13 is clipped. [ $V_{WPS\_R^{TX}}$ ] (5) Repeat (3) and (4) when pin 25 (input) pin 14 (measure) [ $DR_G$ ] and pin 26 pin 15 [ $DR_B$ ], likewise.

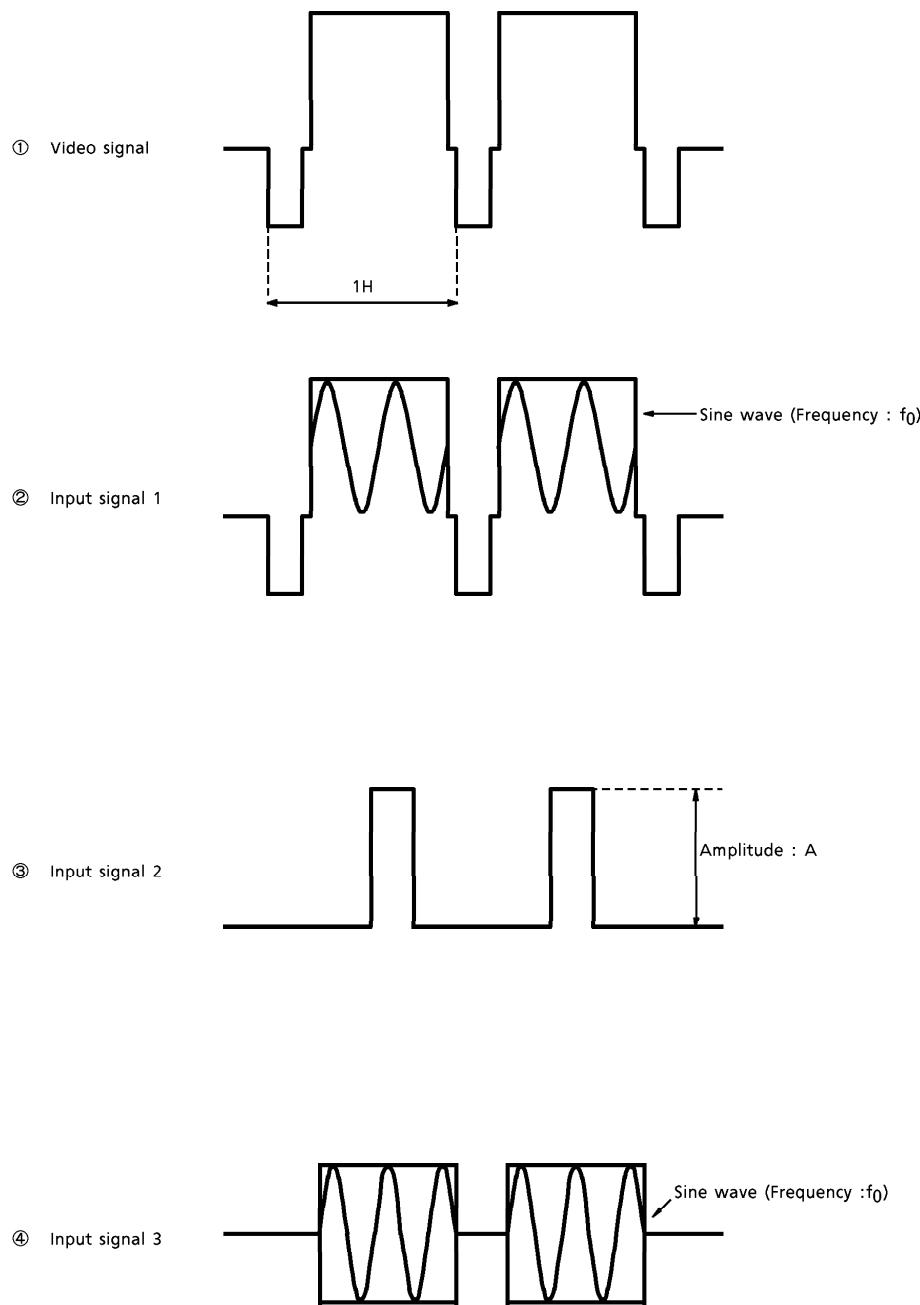

NOTE No.	ITEM	SW MODE	MEASUREMENT METHOD (TEST CONDITION : $V_{CC} = 12V$ , $T_a = 25^\circ C$ )
86	RGB Contrast Pin Variation Range	SW <sub>7</sub> b	(1) Apply external supply of 5V to pin 23. (2) Calculate each pin 27 voltage when changing the data of RGB contrast to (7F) : max., (40) : center and (00) : min. [ $V_{27}^{MAX}$ , $V_{27}^{CNT}$ , $V_{27}^{MIN}$ ] (3) Calculate the difference of RGB contrast pin voltage. $V_{27}(+) = V_{27}^{MAX} - V_{27}^{CNT}$ $V_{27}(-) = V_{27}^{CNT} - V_{27}^{MIN}$
