

100343 Low Power 8-Bit Latch

General Description

The 100343 contains eight D-type latches, individual inputs, (D_n), outputs (Q_n), a common enable pin ($\bar{E}$), and a latch enable pin ($\bar{LE}$). A Q output follows its D input when both $\bar{E}$ and $\bar{LE}$ are LOW. When either $\bar{E}$ or $\bar{LE}$ (or both) are HIGH, a latch stores the last valid data present on its D input prior to $\bar{E}$ or $\bar{LE}$ going HIGH.

The 100343 outputs are designed to drive a 50 Ω termination resistor to -2.0V. All inputs have 50 k Ω pull-down resistors.

Features

- Low power operation
- 2000V ESD protection
- Voltage compensated operating range = -4.2V to -5.7V
- Available to industrial grade temperature range
