
HA12211NT

Audio Signal Processor for Cassette Deck (Deck 1 Chip)

HITACHI

ADE-207-223A (Z)

2nd. Edition
June 1997

Description

HA12211NT is silicon monolithic bipolar IC providing REC equalizer system, PB equalizer system and each electronic control switch in one chip.

Functions

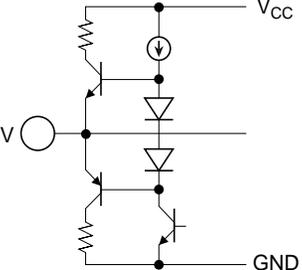

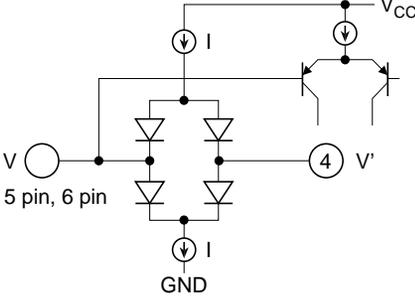

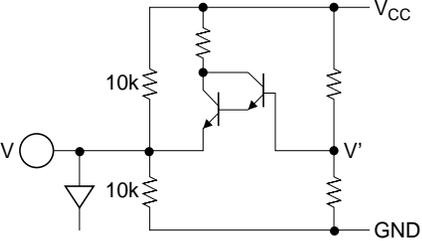

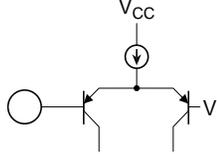

- PB equalizer × 2 channel
- REC equalizer × 2 channel
- Each electrical control switch to change equalizer characteristics
- REC mute
- REC head return switch

Features

- REC equalizer is very small number of external parts.(4 types of frequency characteristics built-in)
- PB equalizer built-in. (A/B input changing system, 4 types of frequency characteristics)
- Independent PB sensitivity for A deck, B deck.
- Normal-speed/high-speed, normal tape/chrome tape switching built-in.
- Controllable from direct micro-computer output.
- Available to reduce substrate-area because of high integration and small external parts.

Functional Description

Power Supply Range

This IC is designed to operate on single supply, shown by table 1.

Table 1 Sply Voltage

| Item | Power Supply Range |
|---------------|--------------------|
| Single Supply | 9.5V to 15.0V |

Reference Voltage

So little is the current drivability of AC reference (Vref) that the Vref voltage may be altered by A/B switching of PB-EQ.

Provided it causes you anxiety, please use the constant 1/2 V_{cc} voltage circuit, for example, figure 1.

In addition, this IC has a capacitor charger for Vref pin.

Operating Mode Control

This IC provides fully electronic switching circuits. And each operating mode control is controlled by parallel data (DC voltage).

Table 2 Threshold Voltage (V_{th})

| Pin No. | Lo | Mid | Hi | Unit | Test Condition |
|----------------|------------|------------|-----------------|------|--|
| 20, 21, 22, 23 | 0.0 to 2.5 | — | 4.0 to V_{cc} | V | Input Pin  |
| 24 | 0.0 to 1.0 | 2.0 to 3.0 | 4.0 to V_{cc} | V | |

- Note:
- 20 to 23 pins are pulled down Lo level, and 24 pin is pulled to Mid level by the inside resistor 100k Ω .
 - Over shoot level and under shoot level of input signal must be the standardized.
(High: V_{cc} , Low: $-0.2V$)

Block Diagram

This IC can be constructed for simple system which has little external parts by used the head serving both as Recording and Play back because of REC return SW built-in.

With output Hi-Z of REC-EQ and input muting, this IC is realized not only REC mute attenuation sufficiently but reducing pop noise in REC muting.

Note: Referring to Parallel Data Format also.

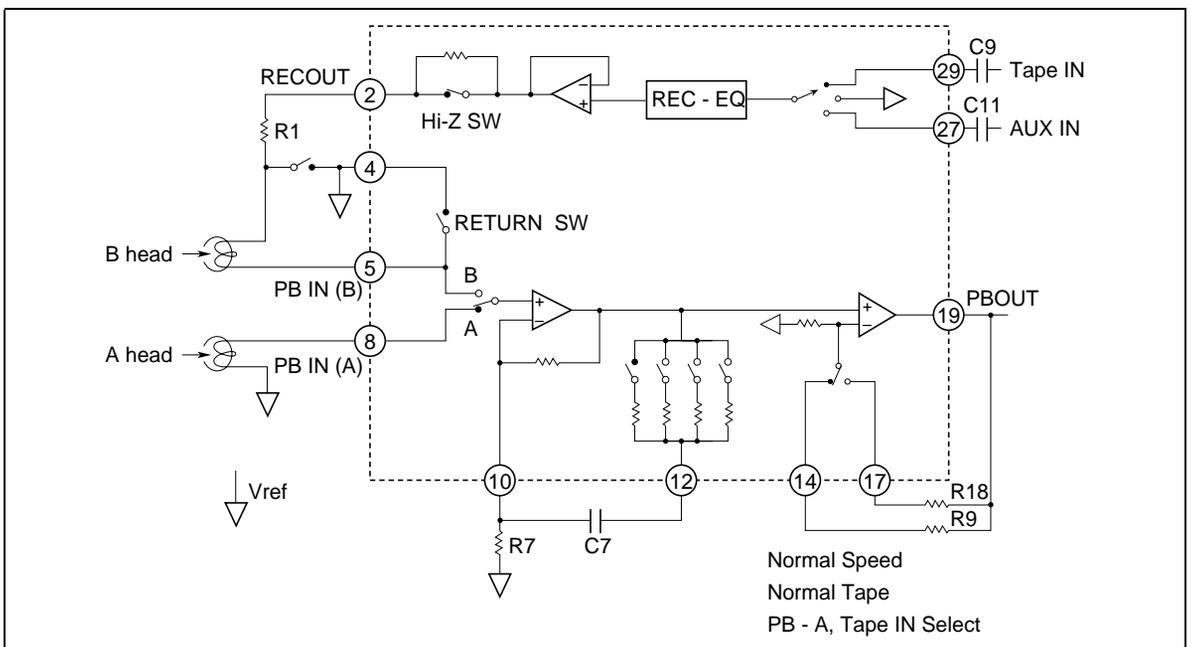

Figure 2 Block Diagram (Lch)

Level Diagram

It is the target that total play back output level is adjusted to 300mV; Dolby level, which the PB system gain in all is included of external amplifier's (Dolby IC etc.) as follows figure 3. Though A head adjustment is independent of B, select the value of R9, R18 adequately.

Regarding REC-EQ adjust the gain in front of input to this IC.

The level diagram at 1kHz is shown by figure 4.

- Note:
1. R1 needs the value more than 1kHz.
 2. Depending on the employed REC/PB head and test tape characteristics, there is rare case that the REC-EQ frequency characteristics of this IC can not be matched to the required characteristics because of built-in resistors which determined the REC-EQ parameters in this case, please inquire the responsible agent because of the adjustment of built-in resistors is necessary.
