

PA2005

LINEAR INTEGRATED CIRCUIT

20W BRIDGE AMPLIFIER FOR CAR RADIO

DESCRIPTION

The UTC **PA2005** is class B dual audio power amplifier, have designed for car radio application.

FEATURES

* High output power:

$P_{OUT}=10+10W@R_L=2\Omega$, THD=10%

$P_{OUT}=20W@R_L=4\Omega$, THD=1%

HZIP-11A

HSIP-14B

ORDERING INFORMATION

Ordering Number		Package	Packing

(3) G: Halogen Free, L: Lead Free

PIN CONFIGURATION

HZIP-11A

HSIP-14B

PIN DESCRIPTION

PIN NO.		PIN NAME
HZIP-11	HSIP-14*	
1	1	INPUT+ (1)
2	2	INPUT- (1)
3	3	SVRR
4	4	INPUT- (2)
5	5	INPUT+ (2)
6	6	GND
7	10	BOOTSTRAP 2
8	11	OUTPUT 2
9	12	+Vs
10	13	OUTPUT 1
11	14	BOOTSTRAP 1

* PIN 7, 8, 9 no connection.

■ BLOCK DIAGRAM

■ ABSOLUTE MAXIMUM RATINGS

PARAMETER		SYMBOL	RATINGS	UNIT
Operating Supply Voltage		V _{SS}	18	V
DC Supply Voltage		V _{SS}	28	V
Peak Supply Voltage (for 50ms)		V _{SS}	40	V
Output Peak Current (Note)	non repetitive t=0.1ms	I _O	4.5	A
	repetitive f ≥10Hz	I _O	3.5	A
Power Dissipation at T _C =60°C		P _D	30	W
Junction Temperature		T _J	+150	°C
Storage Temperature		T _{STG}	-40 ~ 150	°C

Note: The max. output current is internally limited.

■ THERMAL DATA

PARAMETER	SYMBOL	RATINGS	UNIT
Junction to Case	θ _{JC}	3.0	°C/W

■ ELECTRICAL CHARACTERISTICS

(Refer to the application circuit, T_a=25°C, G_v=50dB, R_{th}(heatsink)=4°C/W, unless otherwise specified.)

PARAMETER	SYMBOL	TEST CONDITIONS	MIN	TYP	MAX	UNIT

Bridge amplifier

Stereo amplifier

■ BRIDGE AMPLIFIER DESIGN

The following considerations can be useful when designing a bridge amplifier.

PARAMETER		SINGLE ENDED	BRIDGE
$V_{OUT\ max}$	Peak Output Voltage (before clipping)	$\frac{1}{2} (V_s - 2V_{CE\ sat})$	$V_s - 2V_{CE\ sat}$
$I_{OUT\ max}$	Peak Output Current (before clipping)	$\frac{1}{2} \frac{V_s - 2V_{CE\ sat}}{R_L}$	$\frac{V_s - 2V_{CE\ sat}}{R_L}$
$P_{OUT\ max}$	RMS Output Power (before clipping)	$\frac{1}{4} \frac{(V_s - 2V_{CE\ sat})^2}{2R_L}$	$\frac{(V_s - 2V_{CE\ sat})^2}{2R_L}$

Where: $V_{CE\ sat}$ =output transistors saturation voltage

V_s =allowable supply voltage

R_L =load impedance

Voltage and current swings are twice for a bridge amplifier in comparison with single ended amplifier. In other words, with the same R_L the bridge configuration can deliver an output power that is four times the output power of a single ended amplifier, while, with the same max output current the bridge configuration can deliver an output power that is twice the output power of a single ended amplifier. Care must be taken when selecting V_s and R_L in order to avoid an output peak current above the absolute maximum rating.

From the expression for $I_{o\ max}$, assuming $V_s=14.4V$ and $V_{CE\ sat}=2V$, the minimum load that can be driven by UTC PA2005 in bridge configuration is:

$$R_{L\ min} = \frac{V_s - 2V_{CE\ sat}}{I_{OUT\ max}} = \frac{14.4 - 4}{3.5} = 2.97\Omega$$

The voltage gain of the bridge configuration is given by (see Figure 3):

$$G_v = \frac{V_o}{V_i} = 1 + \frac{R_1}{\left(\frac{R_2 R_4}{R_2 + R_4}\right)} + \frac{R_3}{R_4}$$

For sufficiently high gains (40 ~ 50dB) it is possible to put $R_2=R_4$ and $R_3=2R_1$, simplifying the formula in:

$$G_v = 4 \frac{R_1}{R_2}$$

G_v (dB)	$R_1(\Omega)$	$R_2=R_4(\Omega)$	$R_3(\Omega)$
40	1000	39	2000
50	1000	12	2000

■ BUILT-IN PROTECTION SYSTEMS

LOAD DUMP VOLTAGE SURGE

The UTC PA2005 has a circuit which enables it to withstand a voltage pulse train, on pin9, of the type shown in Figure 3.

If the supply voltage peaks to more than 40V, then an LC filter must be inserted between the supply and pin9, in order to assure that the pulses at pin 9 will be held within the limits shown.

A suggested LC network is shown in Figure 2. With this network, a train of pulses with amplitude up to 120V and width of 2ms can be applied at point A. This type of protection is ON when the supply voltage (pulse or DC) exceeds 18V. For this reason the maximum operating supply voltage is 18V.

Figure 2

Figure 3

SHORT CIRCUIT (AC AND DC CONDITIONS)

The UTC PA2005 can withstand a permanent short circuit on the output for a supply voltage up to 16V.

POLARITY INVERSION

High current (up to 10A) can be handled by the device with no damage for a longer period than the blow-out time of a quick 2A fuse (normally connected in series with the supply). This feature is added to avoid destruction, if during fitting to the car, a mistake on the connection of the supply is made.

OPEN GROUND

When the ratio is in the ON condition and the ground is accidentally opened, a standard audio amplifier will be damaged. On the UTC PA2005 protection diodes are included to avoid any damage.

INDUCTIVE LOAD

A protection diode is provided to allow use of the UTC PA2005 with inductive loads.

DC VOLTAGE

The maximum operating DC voltage for the UTC PA2005 is 18V.

However the device can withstand a DC voltage up to 28V with no damage. This could occur during winter if two batteries are series connected to crank the engine.

THERMAL SHUT-DOWN

The presence of a thermal limiting circuit offers the following advantages:

- (1). An overload on the output (even if it is permanent), or an excessive ambient temperature can be easily withstood.
- (2). The heatsink can have a smaller factor of safety compared with that of a conventional circuit. There is no device damage in the case of excessive junction temperature; all that happens is that P_o (and therefore P_{tot}) and I_d are reduced.

The maximum allowable power dissipation depends upon the size of the external heatsink (i.e. its thermal resistance); Figure 4 shows the dissipation power as a function of ambient temperature for different thermal resistance.

LOUDSPEAKER PROTECTION

The circuit offers loudspeaker protection during short circuit for one wire to ground.
