## AN2526NFH

## Automotive LCD TV signal processor IC

## Overview

The AN2526NFH is a video signal processing IC with an LCD's 5 V-source driving power supply for TFT color LCD (normally white type), and it supports NTSC and PAL systems. The main circuitry of this IC includes videosignal processing circuit, color signal processing circuit, interface circuit, synchronizing circuit and many color quality adjusting circuits. This IC converts the composite video signal or separated Y/C signal or RGB signals into RGB signals available for TFT color LCD.

## Features

- Supply voltage: $5 \mathrm{~V} / 7.5 \mathrm{~V}$
- Built-in LCD's 5 V-source driving power supply
- Low consumption power (typ. 260 mW )
- Supporting NTSC and PAL
- Supporting composite, component and color differential signal input
- Video signal analog RGB (2 systems) One is for OSD (analog/digital).
- Each mode setting is possible with 3 -wire or $\mathrm{I}^{2} \mathrm{C}$ Bus control.
- Electronic volume (D/A converter) built in
- Contrast/Brightness/ $\gamma$ correction circuit built in
- Horizontal and vertical display position adjustment are possible by serial control.
- Package: QFP-64HP10L ( $10 \times 10 \times 1.95 \mathrm{~mm}$ )
- Difference from the AN2526FH Compared to the AN2526FH, the sync. system gain is increased in no signal input. This may cause the picture on the screen to be swaying horizontally. So we cannot recommend this IC to be used in the set with no-signal input mode.

## Applications

- 4 inches to 7 inches middle size TFT LCD equipment of normally white, of such as in-car TV, an LCD monitor for car navigation system.

Note) The package of this product will be changed to lead-free type (QFP064-P-1010A). See the new package dimensions section later of this datasheet.

## Application Circuit Examples

1. Composite signal input

## Application Circuit Examples (continued)

2. Component signal input

## Application Circuit Examples (continued)

## 3. Analog RGB signal input

## Pin Descriptions

| Pin No. | Description | Pin No. | Description |
| :---: | :---: | :---: | :---: |
| 1 | $\mathrm{V}_{\mathrm{CC} 1}(5.0 \mathrm{~V})$ | 33 | PWM output pin |
| 2 | Reference voltage pin | 34 | Power-on reset detection pin |
| 3 | R-ch. clamp detection pin | 35 | Vertical synchronous signal input pin |
| 4 | G-ch. clamp detection pin | 36 | 1H reverse signal input pin |
| 5 | B-ch. clamp detection pin | 37 | Clock-system GND ( $\mathrm{V}_{\text {SS }}$ ) |
| 6 | R-ch. decoder output pin | 38 | Clamp pulse input pin |
| 7 | G-ch. decoder output pin | 39 | DAC monitor pin |
| 8 | B-ch. decoder output pin | 40 | Clock-system power supply (3.0 V) |
| 9 | R-ch. analog signal input pin | 41 | GND 2 |
| 10 | G-ch. analog signal input pin | 42 | Analog imposing control signal input pin |
| 11 | B-ch. analog signal input pin | 43 | AFC loop filter connecting pin |
| 12 | R-ch. analog/character signal input pin | 44 | VCO frequency adjustment pin |
| 13 | G-ch. analog/character signal input pin | 45 | Synchronous signal input pin |
| 14 | B-ch. analog/character signal input pin | 46 | Serial/ $/{ }^{2} \mathrm{C}$ Bus switching pin |
| 15 | Black level indication control signal input pin | 47 | Serial data shift clock input pin |
| 16 | Character picking up pulse input pin | 48 | Serial data input pin |
| 17 | B-ch. output pin | 49 | Serial data write pulse input pin |
| 18 | B-ch. output DC feedback detection pin | 50 | ACC detection pin |
| 19 | G-ch. output pin | 51 | ACC input pin |
| 20 | $\mathrm{V}_{\mathrm{CC} 2}(7.5 \mathrm{~V})$ | 52 | Horizontal clock detection pin |
| 21 | Drive output reference potential input pin | 53 | Chroma killer detection pin |
| 22 | GND 1 | 54 | APC detection pin |
| 23 | G-ch. output DC feedback detection pin | 55 | VXO input pin |
| 24 | R-ch. output pin | 56 | VXO output pin |
| 25 | R-ch. output DC feedback detection pin | 57 | Y-system clamp detection pin |
| 26 | Common reverse signal output pin | 58 | Chroma trap filter connection pin |
| 27 | Testing pulse input pin | 59 | GND 3 |
| 28 | Testing clock input pin | 60 | Luminance signal input pin |
| 29 | Field identification signal output pin | 61 | $\mathrm{R}-\mathrm{Y}$ output pin |
| 30 | Composite synchronous signal output pin | 62 | B-Y output pin |
| 31 | Vertical synchronous signal output pin | 63 | $\mathrm{R}-\mathrm{Y}$ input pin |
| 32 | Horizontal synchronous signal output pin | 64 | B-Y input pin |

## - Absolute Maximum Ratings

| Parameter | Symbol | Rating | Unit |
| :---: | :---: | :---: | :---: |
| Supply voltage | $\mathrm{V}_{\mathrm{CC} 1}$ | 5.5 | V |
|  | $\mathrm{V}_{\mathrm{CC} 2}$ | 8.5 |  |
| Supply current | $\mathrm{I}_{\mathrm{CC}}$ | - | mA |
| Power dissipation *2 | $\mathrm{P}_{\mathrm{D}}$ | 423 | mW |
| Operating ambient temperature *1 | $\mathrm{T}_{\text {opr }}$ | -30 to +85 | ${ }^{\circ} \mathrm{C}$ |
| Storage temperature *1 | $\mathrm{T}_{\text {stg }}$ | -55 to +150 | ${ }^{\circ} \mathrm{C}$ |

Note) $* 1$ : Except for the operating ambient temperature and storage temperature, all ratings are for $\mathrm{T}_{\mathrm{a}}=25^{\circ} \mathrm{C}$.
*2: The power dissipation shown is the value in free air for $\mathrm{T}_{\text {opr }}=85^{\circ} \mathrm{C}$.

- Recommended Operating Range

| Parameter | Symbol | Range | Unit |
| :---: | :---: | :---: | :---: |
| Supply voltage | $\mathrm{V}_{\mathrm{CC} 1}$ | 4.7 to 5.3 | V |
|  | $\mathrm{~V}_{\mathrm{CC} 2}$ | 7.0 to 8.0 |  |

Electrical Characteristics at $\mathrm{T}_{\mathrm{a}}=25^{\circ} \mathrm{C}$

| Parameter | Symbol | Conditions | Min | Typ | Max | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| DC |  |  |  |  |  |  |
| $\mathrm{V}_{\mathrm{CC1} 1}$-system current consumption | $\mathrm{I}_{\text {TOTAL1 }}$ | - | 29 | - | 43 | mA |
| $\mathrm{V}_{\mathrm{CC} 2}$-system current consumption | $\mathrm{I}_{\text {TOTAL2 }}$ | - | 6.0 | - | 14.0 | mA |
| Pin 2 voltage | $\mathrm{V}_{2}$ | - | 1.8 | - | 2.2 | V |
| Pin 40 voltage | $\mathrm{V}_{40}$ | - | 2.7 | - | 3.3 | V |
| Chroma system |  |  |  |  |  |  |
| $\mathrm{R}-\mathrm{Y}$ standard gain | $\mathrm{G}_{\mathrm{RY}}$ | $\begin{aligned} & \mathrm{SG} 3\left(\mathrm{Y}_{\mathrm{y}}=-17 \mathrm{~dB}, \mathrm{Y}_{\mathrm{s}}=0 \mathrm{~V}[\mathrm{p}-\mathrm{p}],\right. \\ & \text { NTSC }), \text { ch. } 1=" \mathrm{C} 0 " \end{aligned}$ | 9.5 | - | 14.5 | dB |
| R-Y/G-Y relative gain | $\mathrm{G}_{\text {RYGY }}$ | $\begin{aligned} & \mathrm{SG} 3\left(\mathrm{Y}_{\mathrm{y}}=-17 \mathrm{~dB}, \mathrm{Y}_{\mathrm{s}}=0 \mathrm{~V}[\mathrm{p}-\mathrm{p}],\right. \\ & \text { NTSC }), \text { ch. } 1=" \mathrm{C} 0 " \end{aligned}$ | -8.0 | - | -4.0 | dB |
| B-Y standard gain | $\mathrm{G}_{\mathrm{BY}}$ | $\begin{aligned} & \text { SG3 }\left(\mathrm{Y}_{\mathrm{y}}=-17 \mathrm{~dB}, \mathrm{Y}_{\mathrm{s}}=0 \mathrm{~V}[\mathrm{p}-\mathrm{p}],\right. \\ & \text { NTSC), ch. } 1=\text { "C0" } \end{aligned}$ | 9.5 | - | 14.5 | dB |
| B-Y/G-Y relative gain | $\mathrm{G}_{\text {BYGY }}$ | $\begin{aligned} & \text { SG3 }\left(Y_{y}=-17 \mathrm{~dB}, \mathrm{Y}_{\mathrm{s}}=0 \mathrm{~V}[\mathrm{p}-\mathrm{p}],\right. \\ & \text { NTSC }) \text {, ch. } 1=\text { "C0" } \end{aligned}$ | -20.5 | - | -12.5 | dB |
| High-level APC pull-in | $\mathrm{AP}_{\mathrm{H}}$ | SG5 (4.43 MHz + 520 Hz, PAL) | 500 | - | 540 | Hz |
| Low-level APC pull-in | $\mathrm{AP}_{\mathrm{L}}$ | SG5 (4.43 MHz - 520 Hz, PAL) | $-540$ | - | -500 | Hz |

## Usage Notes

- You are required to study adequately before using it in PAL.
- If the duty of PWM output is set to other than $0 \%$ to $100 \%$, the jitter of the HD out put increases. So, confirm the horizontal jitter amount on the screen of the set you introduce the PWM function into.

## Technical Data

## Serial data control

In addition to its serial control by the conventional three-wire method, the AN2526NFH can be controlled by the $I^{2} \mathrm{C}$ Bus. The transmission method is selected by the voltage to be applied to Pin 46.

Three-wire control mode: Pin 46 Low-level (connect to GND)
$I^{2} \mathrm{C}$ Bus mode: $\mathrm{Pin} 46=$ High-level ( Pin 41 : connect to $\mathrm{V}_{\mathrm{DD}}$ )
It is recommended that the serial data is transferred during a vertical blanking period.

## 1. Three-wire control mode

A serial data is of three-line system transmitting three kinds of signals of data, shift clock and load pulse independently. The data to be transmitted is made up by 12 bits in total of address ( 4 bits) and data ( 8 bits). The DAC is composed of four blocks of serial-parallel conversion, address decoder, data latch and ladder resistors, enabling to control 16 channels in total. Further, the mode setting such as the input signal switching is done by a serial data to reduce the pin count.

- Vertical sync. output timing adjusting range

The pin 31 timing is synchronous with the pin 35 input timing.
The above timing chart is just for your reference.

## Technical Data (continued)

## 1. Three-wire control mode (continued)

4) Mode setup channel bit-map. (continued)

- Horizontal PLL start position adjustment range

- ch.1: Horizontal sync. output position adjustment

The delay time of pin 30 output to video signal is likely to vary according to an external constant connected to pin 45. For an external constant, you are required to evaluate adequately the characteristics in weak electric field. Though the horizontal sync signal output adjustment range is designed by referring to the center of pin 30 output pulse, there would be some error according to VCO free-run frequency.

2. $\mathrm{I}^{2} \mathrm{C}$ control mode

A serial data is capable of transferring 9-bit unit of 8-bit transfer data and 1-bit answering data using two kinds of signal lines of data and shift clock.

When a slave address after setting a start condition matches the address on the IC side, you can receive the data to be transmitted from then. Once the stop condition is set up, the next transmitting data will be ignored until the start condition is set up.

There are two kinds of transfer mode: an auto-increment mode which does not transmit sub-address, and data upgrade mode which transmits sub-address + data by 2 bites.

The typical models of transmitting sequence are shown below:

1) Start condition

When the S data changes from high-level to low-level at SCLK = high-level, a data receiving mode becomes available.
2) Slave address transfer

The slave address of the AN2526NFH is 88 h at pin $49=$ high-level and 8 Ah at pin $49=$ low-level.

3) Sub address transfer

When a data transfer mode bit is 0 , all the serial data columns transferred until a stop condition is set is regarded as the data block.

Technical Data (continued)
2. $I^{2} \mathrm{C}$ control mode (continued)
4) Data transfer

At auto increment mode: Data transfer At data update mode: Sub address transfer
5) Stop condition

When S-data changes from low-level to high-level at SCLK = high-level, data reception is halted.
6) Pulse timing

Timing chart expanded diagram

| Parameter | Symbol | Min | Typ | Max | Unit |
| :--- | :---: | :---: | :---: | :---: | :---: |

New Package Dimensions (Unit: mm)

- QFP064-P-1010A (Lead-free package)

(1) An export permit needs to be obtained from the competent authorities of the Japanese Government if any of the products or technologies described in this material and controlled under the "Foreign Exchange and Foreign Trade Law" is to be exported or taken out of Japan.
(2) The technical information described in this material is limited to showing representative characteristics and applied circuit examples of the products. It does not constitute the warranting of industrial property, the granting of relative rights, or the granting of any license.
(3) The products described in this material are intended to be used for standard applications or general electronic equipment (such as office equipment, communications equipment, measuring instruments and household appliances).
Consult our sales staff in advance for information on the following applications:
- Special applications (such as for airplanes, aerospace, automobiles, traffic control equipment, combustion equipment, life support systems and safety devices) in which exceptional quality and reliability are required, or if the failure or malfunction of the products may directly jeopardize life or harm the human body.
- Any applications other than the standard applications intended.
(4) The products and product specifications described in this material are subject to change without notice for reasons of modification and/or improvement. At the final stage of your design, purchasing, or use of the products, therefore, ask for the most up-to-date Product Standards in advance to make sure that the latest specifications satisfy your requirements.
(5) When designing your equipment, comply with the guaranteed values, in particular those of maximum rating, the range of operating power supply voltage and heat radiation characteristics. Otherwise, we will not be liable for any defect which may arise later in your equipment.
Even when the products are used within the guaranteed values, redundant design is recommended, so that such equipment may not violate relevant laws or regulations because of the function of our products.
(6) When using products for which dry packing is required, observe the conditions (including shelf life and after-unpacking standby time) agreed upon when specification sheets are individually exchanged.
(7) No part of this material may be reprinted or reproduced by any means without written permission from our company.

## Please read the following notes before using the datasheets

A. These materials are intended as a reference to assist customers with the selection of Panasonic semiconductor products best suited to their applications.
Due to modification or other reasons, any information contained in this material, such as available product types, technical data, and so on, is subject to change without notice.
Customers are advised to contact our semiconductor sales office and obtain the latest information before starting precise technical research and/or purchasing activities.
B. Panasonic is endeavoring to continually improve the quality and reliability of these materials but there is always the possibility that further rectifications will be required in the future. Therefore, Panasonic will not assume any liability for any damages arising from any errors etc. that may appear in this material.
C. These materials are solely intended for a customer's individual use.

Therefore, without the prior written approval of Panasonic, any other use such as reproducing, selling, or distributing this material to a third party, via the Internet or in any other way, is prohibited.
