

LOW Noise150mA CMOS High Performance LDO Regulator

The KIC3211Series Low Dropout Linear Regulator is ideally suited for portable applications. It offers 1% initial accuracy, extremely-low dropout voltage(220mV at 150mA, 3.0V Output Type) and low ground current (typically 75uA). Designed specifically for handheld and battery-powered devices, the KIC3211series provides a TTL-logic-compatible ON/OFF control pin. When disabled, power consumption drops nearly to zero.

The KIC3211Series also works with low-ESR ceramic capacitors, reducing the amount of board space necessary for power applications, critical in handheld wireless devices.

The Line transient response and load transient response of the KIC3211Series are very excellent, thus ICs are very suitable for the power supply for hand-held communication equipment.

Applications

- Cellular phones,Smart Phones, PDA
- Battery-powered equipment
- Laptop, notebook and palmtop computers
- Consumer/personal electronics

Features

- Input voltage range -----1.7V to 6.0V
- High output accuracy-----1.0% accuracy
- Low dropout-----220mV@150mA 3.0V, Output type
- Stability with ceramic output capacitors
- High Ripple Rejection-----Typ. 70dB(f=1kHz3.0V Output type)
Typ. 60dB(f=10kHz3.0V Output type)
- Low ground Current-----Typ.75 μ A
- Quiescent Current-----Typ. 0.1 μ A
- Excellent Line regulation-----Typ. 0.02%/V
- Built-in Fold Back Protection Circuit-----Typ. 50mA@Short mode
- Stability with ceramic output capacitors-----Cin=Cout=1.0 μ F
- TTL-Logic-compatible ON/OFF control input

SELECTION GUIDE

The output voltage, package type for the ICs can be selected at the user's request.

The selection can be made with designating the part number as shown below;

KIC3211XXXXA ← Part Number
 a b

Code	Contents
a	Dessignation of Package Type: SN : SON1612-6
b	Setting Output Voltage (VOUT) : Stepwise setting with a step of 0.1V in the range of 1.2V to 4.0V is possible.

Note 1) Dropout Voltage is defined as the input-to-output differential at which the output voltage drops 2% below its nominal value measured at 1V differential. For outputs below 2.5V, dropout voltage is the input-to-output voltage differential with the minimum input voltage 2.6V

Note 2) Ground pin current is the regulator quiescent current. The total current drawn from the supply is the sum of the load current plus the ground pin current.
