

TENTATIVE TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

T 6 B 6 6 A

ROW DRIVER LSI FOR DOT MATRIX LCD

The TOSHIBA T6B66A is a row (common) driver LSI for a small- or medium-scale dot matrix LCD.

The T6B66A generates timing signals for the display using an on-chip oscillator and also controls the T6B65A column (segment) LCD driver.

Four duty options are available: 1/17, 1/33, 1/49 and 1/65.

It has 65 low-impedance row-driver outputs.

It has internal resistors to divide the bias voltage, a power supply Op-Amp DC-DC converter and a contrast control circuit.

It is easy to construct a low-power LCD system consisting of a T6B66A and a T6B65A column (segment) LCD driver.

Weight : 1.6g (typ.)

FEATURES

- Timing signal for LCD generated
- 65 low-impedance LCD driver outputs
- On-chip oscillator with external resistor and internal capacitor
- Duty : 1/17, 1/33, 1/49, 1/65
- Low power consumption
- Logic power supply : 2.7 to 5.5V
- LCD power supply : $V_{DD} - 4.0$ to $V_{DD} - 16.0V$
- CMOS Si-Gate process
- 100-pin flat plastic package

961001EBA2

- TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.
- The products described in this document are subject to foreign exchange and foreign trade control laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.

BLOCK DIAGRAM

(*) When external clock operation is used, the clock should be input to OSC1.

PIN ASSIGNMENT

PIN FUNCTIONS

PIN NAME	PIN No.	I/O	FUNCTIONS				
COM1 to COM65	8 to 72	Output	Row driver outputs				
C _L	99	Output	Shift clock pulse				
PM	100	Output	Pre-Frame signal				
/ φ	3	Output	Clock signal				
/ LE	89	Input	Latch Enable signal				
/ WR	88	Input	Write Enable signal				
DB0 to DB5	92 to 97	Input	Data bus				
DS1, DS2	4, 5	Input	Display duty select				
			DISPLAY DUTY	1 / 17	1 / 33	1 / 49	1 / 65
			DS1	0	1	0	1
			DS2	0	0	1	1
FS1, FS2	6, 7	Input	Frequency select				
			FS1	FS2	f _{OSC} (kHz)	f _{PM} (Hz)	f _{/φ} (kHz)
			0	0	26.88	35	13.44
			1	0	53.76	35	26.88
			0	1	215.0	35	107.5
1	1	430.1	35	215.0			
/ STB	87	Input	Standby pin : when / STB = L, all clocks stop.				
/ RST	91	Input	Reset signal pin : When / RST = L, registers are cleared.				
OSC1, OSC2	1, 2	Input	When using the internal clock oscillator, connect a resistor or ceramic oscillator between OSC1 and OSC2. When using an external clock, connect the clock to OSC1 and leave OSC2 open.				
V _{OUT1}	82	Output	DC-DC output pin				
V _{OUT2}	79	Output	DC-DC output pin				
C _n A to C _n B	83 to 86	—	Connect using a capacitor for DC-DC converter (n = 1 to 3)				
V _{DD} , V _{SS}	90, 98	—	Power supply				
V _{LC1} to V _{LC5}	73 to 77	—	Power supply for LCD drive				
V _{EE}	78	—	Power supply for LCD drive				

FUNCTION OF EACH BLOCK

● Oscillator

The T6B66A has an on-chip oscillator with one external resistor.

R_f	f_{osc}	FS1	FS2
51k Ω	430kHz	H	H
110k Ω	215kHz	L	H
460k Ω	54kHz	H	L
1100k Ω	27kHz	L	L

(Note) The resistance values are typical values.
The oscillation frequency depends on how the device is mounted. It is necessary to adjust the oscillation frequency to a target value.

Relationship between oscillation frequency and R_f

● Timing generation circuit

This circuit divides the signals from the oscillator and generates display timing signals (CL, PM) and the operating clock (ϕ) signal.

● Shift register

65-bit shift register

● DC-DC converter (tripler and quadrupler)

The T6B66A has an on-chip DC-DC tripler and quadrupler. When $/STB = L$, V_{OUT1} and $V_{OUT2} = V_{DD}$. A 2.2 to 10 μ F capacitor is recommended for this DC-DC Converter.

Quadrupler mode

Tripler mode

When not using the DC-DC converter, leave the CnA, CnB and V_{OUTn} pins open and connect an external V_{EE} supply.

- Row driver circuit and LCD voltage generation circuit

The row driver circuit consists of 65 driver circuits. The combination of the data from the shift register and the Frame signal selects one of the four LCD levels. Details of the voltage generation circuit and the row driver circuit are shown in the diagram as below.

- Resistor ladder, contrast control circuit

The T6B66A has an on-chip resistor with an op-amp, bias selector and a contrast control circuit. The contrast control circuit allows 32 levels of contrast adjustment by software. The bias selector uses software to select the bias : 1/5, 1/7, 1/8 or 1/9.

Details of the resistor ladder and the contrast control circuit are shown in the diagram below.

COMMAND DETAILS

CODE						FUNCTION
DB5	DB4	DB3	DB2	DB1	DB0	
1	CONTRAST (0 to 31)					Set Contrast
0	1	1	*	*	*	Test Mode Select
0	1	0	1	1/0	1/0	Op-Amp Control OP1
0	1	0	0	*	1/0	Op-Amp ON/OFF
0	0	0	1	R ₁	R ₂	Bias Control
0	0	0	0	1	1/0	Display ON/OFF

* : INVALID

- Set contrast

DB5	DB4	DB3	DB2	DB1	DB0
1	D	D	D	D	D

Range : 20H to 3FH

This command sets the contrast for the LCD. The T6B66A has 32 levels of contrast.
(20H (bright)← →3FH (dark))

- Test mode select

DB5	DB4	DB3	DB2	DB1	DB0
0	1	1	*	*	*

* : INVALID

This command selects the test mode. Do not use this command.

- Op-Amp control 1 (OP1)

DB5	DB4	DB3	DB2	DB1	DB0
0	1	0	1	1/0	1/0

Range : 14H to 17H

This command sets the power supply level for the op-amp.

This command selects one of four levels. The command 14H selects the lowest level and 17H the maximum level.

(Notes) When L is input to /RST, the power supply level is the minimum level.

- Op-amp ON / OFF

DB5	DB4	DB3	DB2	DB1	DB0
0	1	0	0	*	1/0

Op-amp ON (0) / OFF (1)

* : INVALID

Range : 10H to 11H

This command sets the op-amp ON/OFF.

When using an external op-amp, the command 11H is used.

- Bias control

DB5	DB4	DB3	DB2	DB1	DB0
0	0	0	1	1/0	1/0

SET UP	BIAS
04H	1 / 5
05H	1 / 7
06H	1 / 8
07H	1 / 9

Range : 04H to 07H

This command sets the bias for the LCD power supply.

- Display ON / OFF

DB5	DB4	DB3	DB2	DB1	DB0
0	0	0	0	1	1/0

Display ON (1) / OFF (0)

Range : 02H to 03H

This command controls the display ON/OFF setting.

When the display is OFF, all the common output waveforms return to the V_{DD} level.

(Note) When L is input to /RST, Display is set to OFF.

ABSOLUTE MAXIMUM RATINGS

(Ta = 25°C)

ITEM	SYMBOL	RATING	UNIT
Supply Voltage (1)	V_{DD} (Note 1)	-0.3 to 7.0	V
Supply Voltage (2)	$V_{EE1, 2}$ (Note 3)	$V_{DD} - 18.0$ to $V_{DD} + 0.3$	V
Input Voltage	V_{in} (Note 1, 2)	-0.3 to $V_{DD} + 0.3$	V
Operating Temperature	T_{opr}	-20 to 75	°C
Storage Temperature	T_{stg}	-55 to 125	°C

(Note 1) Referenced to V_{SS}

(Note 2) Applies to data bus and I/O pins

(Note 3) Ensure that the following condition is always maintained.

$$V_{DD} \geq V_{EE1}, V_{EE2}$$
