TOSHIBA MOS DIGITAL INTEGRATED CIRCUIT SILICON GATE CMOS

524.288-WORD BY 8-BIT FULL CMOS STATIC RAM

DESCRIPTION

The TC55V040AFT is a 4,194,304-bit static random access memory (SRAM) organized as 524,288 words by 8 bits. Fabricated using Toshiba's CMOS Silicon gate process technology, this device operates from a single 2.3 to 3.6 V power supply. Advanced circuit technology provides both high speed and low power at an operating current of 3 mA/MHz and a minimum cycle time of 55 ns. It is automatically placed in low-power mode at 0.5 μ A standby current (at VDD = 3 V, Ta = 25°C, maximum) when chip enable (CE1) is asserted high or (CE2) is asserted low. There are three control inputs. CE1 and CE2 are used to select the device and for data retention control, and output enable (OE) provides fast memory access. This device is well suited to various microprocessor system applications where high speed, low power and battery backup are required. And, with a guaranteed operating extreme temperature range of -40° to 85°C, the TC55V040AFT can be used in environments exhibiting extreme temperature conditions. The TC55V040AFT is available in normal and reverse pinout plastic 40-pin thin-small-outline package (TSOP).

FEATURES

- Low-power dissipation
 Operating: 10.8 mW/MHz (typical)
- Single power supply voltage of 2.3 to 3.6 V
- Power down features using CE1 and CE2
- Data retention supply voltage of 1.5 to 3.6 V
- Direct TTL compatibility for all inputs and outputs
- Wide operating temperature range of –40° to 85°C
- Standby Current (maximum):

3.6 V	7 μΑ
3.0 V	5 μΑ

Access Times (maximum):

	TC55V0)40AFT
	-55	-70
Access Time	55 ns	70 ns
CE1 Access Time	55 ns	70 ns
CE2 Access Time	55 ns	70 ns
OE Access Time	30 ns	35 ns

Package:

TSOP 40-P-1014-0.50 (AFT) (Weight: 0.32 g typ)

PIN ASSIGNMENT (TOP VIEW)

40 PIN TSOP

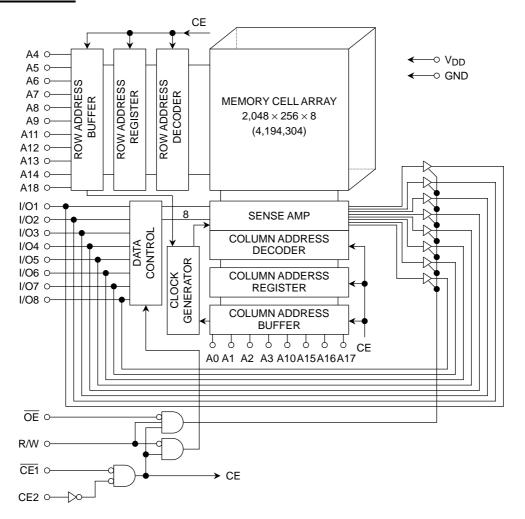

PIN NAMES

A0~A18	Address Inputs
CE1, CE2	Chip Enable

TIMING DIAGRAMS

READ CYCLE (See Note 1)

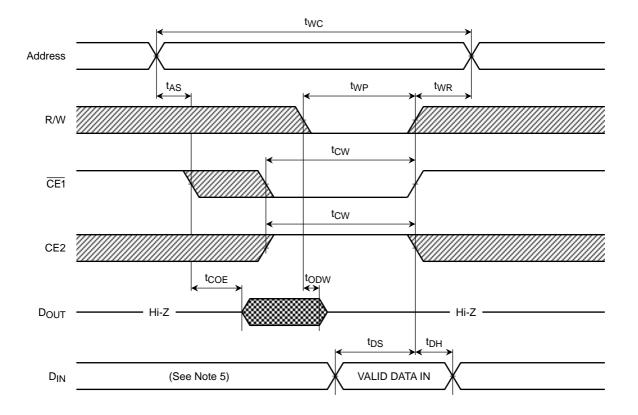

WRITE CYCLE 1 (R/W CONTROLLED) (See Note 4)

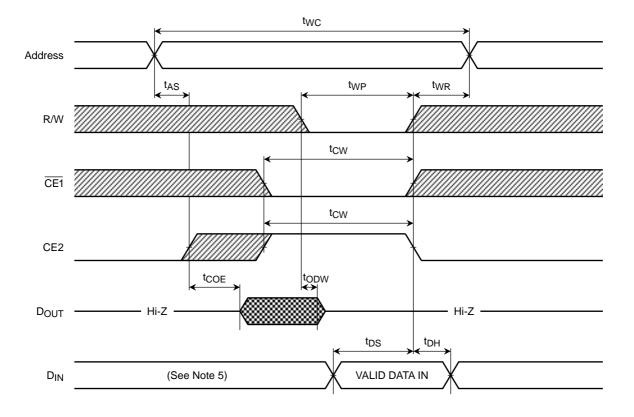

WRITE CYCLE 2 (CE1 CONTROLLED) (See Note 4)

WRITE CYCLE 3 (CE2 CONTROLLED) (See Note 4)

Note:

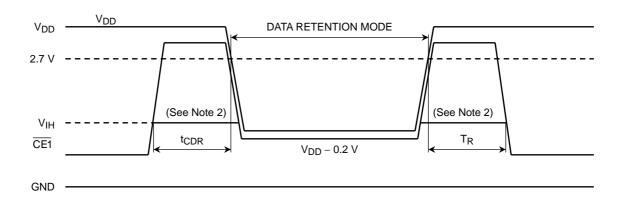

- (1) R/W remains HIGH for the read cycle.
- (2) If $\overline{CE1}$ goes LOW(or CE2 goes HIGH) coincident with or after R/W goes LOW, the outputs will remain at high impedance.
- (3) If $\overline{CE1}$ goes HIGH(or CE2 goes LOW) coincident with or before R/W goes HIGH, the outputs will remain at high impedance.
- (4) If \overline{OE} is HIGH during the write cycle, the outputs will remain at high impedance.
- (5) Because I/O signals may be in the output state at this time, input signals of reverse polarity must not be applied.

DATA RETENTION CHARACTERISTICS (Ta = -40° to 85°C)

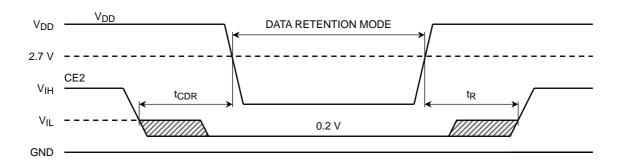

SYMBOL	PARAMETER			MIN	TYP	MAX	UNIT
V_{DH}	Data Retention Supply Voltage			1.5		3.6	V
	Standby Current	VDH = 3.0 V	Ta = -40~40°C	_	_	1	μΑ
I _{DDS2}			Ta = -40~85°C	_	_	5	
		V _{DH} = 3.6 V	Ta = -40~85°C	_	_	7	
t _{CDR}	Chip Deselect to Data Retention Mode Time			0	_	_	ns
t _R	Recovery Time			t _{RC} (See Note)	_	_	ns

Note: Read cycle time

CE1 CONTROLLED DATA RETENTION MODE (See Note 1)

CE2 CONTROLLED DATA RETENTION MODE (See Note 3)

Note:

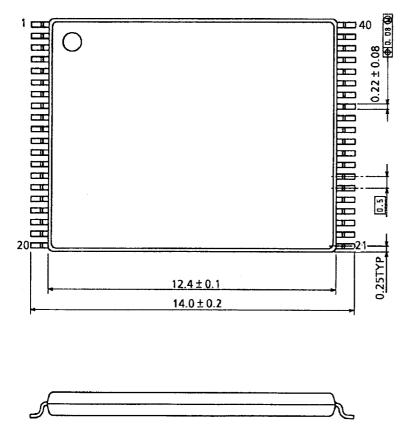

- (1) In $\overline{CE1}$ controlled data retention mode, minimum standby current mode is entered when $CE2 \le 0.2~V$ or $CE2 \ge V_{DD} 0.2~V$.
- (2) When $\overline{CE1}$ is operating at the V_{IH} level (2.2V), the operating current is given by I_{DDS1} during the transition of V_{DD} from 3.6 to 2.4V.
- (3) In CE2 controlled data retention mode, minimum standby current mode is entered when CE2 \leq 0.2 V.

RESTRICTIONS ON PRODUCT USE

030619EBA

- The information contained herein is subject to change without notice.
- The information contained herein is presented only as a guide for the applications of our products. No
 responsibility is assumed by TOSHIBA for any infringements of patents or other rights of the third parties which
 may result from its use. No license is granted by implication or otherwise under any patent or patent rights of
 TOSHIBA or others.
- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
 In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- TOSHIBA products should not be embedded to the downstream products which are prohibited to be produced and sold, under any law and regulations.
