### NC7SV38 TinyLogic® ULP-A 2-Input NAND Gate (Open Drain Output)

### **General Description**

The NC7SV38 is a single 2-Input NAND Gate with open drain output stage from Fairchild's Ultra Low Power-A (ULP-A) series of TinyLogic®. ULP-A is ideal for applications that require extreme high speed, high drive and low power. This product is designed for a wide low voltage operating range (0.9V to 3.6V  $V_{\rm CC}$ ) and applications that require more drive and speed than the TinyLogic ULP series, but still offer best in class low power operation.

The NC7SV38 is uniquely designed for optimized power and speed, and is fabricated with an advanced CMOS technology to achieve high-speed operation while maintaining low CMOS power dissipation.

### Battery Life vs. V<sub>CC</sub> Supply Voltage

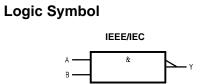

TinyLogic ULP and ULP-A with up to 50% less power consumption can extend your battery life significantly. Battery Life =  $(V_{battery}^* + b_{battery}^*)/(P_{device})/24hrs/day$ 

Where,  $P_{device} = (I_{CC} * V_{CC}) + (C_{PD} + C_L) * V_{CC}^2 * f$ 

Assumes ideal 3.6V Lithium Ion battery with current rating of 900mAH and derated 90% and device frequency at 10MHz, with C<sub>L</sub> = 15 pF load

Note 1: Absolute Maximum Ratings: are those values beyond which the safety of the device cannot be guaranteed. The device should not be oper-ated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 2:  $\mathrm{I}_{\mathrm{O}}$  Absolute Maximum Rating must be observed.

Note 3: Unused inputs must be held HIGH or LOW. They may not float.
