Dual Bridge Drivers

Description

The HA13421A and HA13421AMP monolithic power ICs are dual bridge drivers. The maximum driving current and voltage are 0.33 A \times 12 V per bridge. Therefore, the best use for these parts is in a two-phase bipolar stepping motor driving the head actuator of a 3, to 5.25-inch FDD (Floppy Disk Drive).

Features

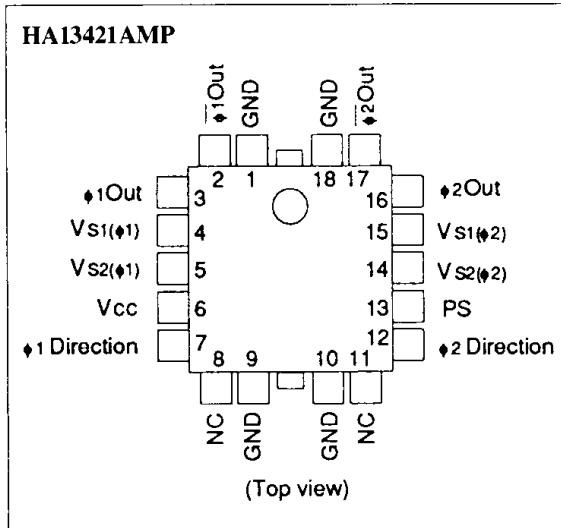

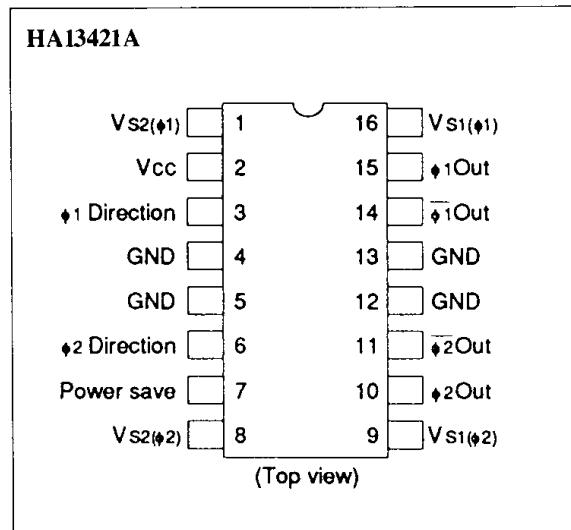

- 330 mA output current capability
- Dual bridge included
- Power save
- Single input direction control
- Low output saturation voltage
- Low supply current
- Low input current
- Compatible with TTL, LSTTL, and 5 V CMOS
- Thermal shutdown

Table 2 Absolute Maximum Ratings ($T_a = 25^\circ\text{C}$)

Seeking supply voltage	Vs1	15	15	V	1
Holding supply voltage	Vs2	7	7	V	1
Input voltage	V _I	0 to Vcc	0 to Vcc	V	
Peak seeking current	I _o (peak)	500	500	mA	2
Seeking current (DC)	I _{os}	330	330	mA	
Holding current (DC)	I _{oh}	200	200	mA	
Power dissipation	P _T	2.0	1.0	W	3
Junction temperature	T _j	150	150	°C	
Operating junction temperature range	T _{jop}	-20 to +125	-20 to +125	°C	
Storage temperature range	T _{stg}	-55 to +125	-55 to +125	°C	

The absolute maximum ratings are limiting values, to be applied individually, beyond which the device may be permanently damaged. Functional operation under any of these conditions is not guaranteed. Exposing a circuit to its absolute maximum rating for extended periods of time may affect the device's reliability.
