

SLOS385 - SEPTEMBER 2001

# LOW-NOISE, HIGH-SPEED CURRENT FEEDBACK AMPLIFIERS

# **FEATURES**

- Low Noise
  - 2.9 pA/√Hz Noninverting Current Noise
  - 10.8 pA/√Hz Inverting Current Noise
  - 2.2 nV/√Hz Voltage Noise
- Wide Supply Voltage Range ±5 V to ±15 V
- Wide Output Swing
  - 25 V<sub>PP</sub> Output Voltage, R<sub>L</sub> = 100  $\Omega$ , ±15-V Supply
- High Output Current, 150 mA (Min)
- High Speed
  - 110 MHz (-3 dB, G=1, ±15 V)
  - 1550 V/ $\mu$ s Slew Rate (G = 2,  $\pm$ 15 V)
- Low Distortion. G = 2
  - 78 dBc (1 MHz, 2 V<sub>PP</sub>, 100-Ω load)
- Low Power Shutdown (THS3115)
  - 300-μA Shutdown Quiescent Current Per Channel
- Thermal Shutdown and Short Circuit Protection
- Standard SOIC, SOIC PowerPAD™, and TSSOP PowerPAD™ Package
- Evaluation Module Available

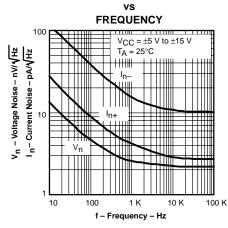

#### **APPLICATIONS**

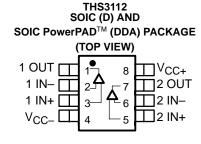

- Communication Equipment
- Video Distribution
- Motor Drivers
- Piezo Drivers

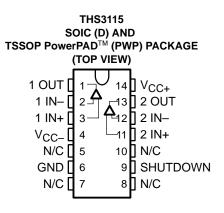

### **DESCRIPTION**

The THS3112/5 are low-noise, high-speed current feedback amplifiers, ideal for any application requiring high output current. The low noninverting current noise of 2.9 pA/ $\sqrt{\text{Hz}}$  and the low inverting current noise of 10.8 pA/ $\sqrt{\text{Hz}}$  increase signal to noise ratios for enhanced signal resolution. The THS3112/5 can operate from  $\pm$ 5-V to  $\pm$ 15-V supply voltages, while drawing as little as 4.5 mA of supply current per channel. It offers low -78-dBc total harmonic distortion driving 2 V<sub>PP</sub> into a 100- $\Omega$  load. The THS3115 features a low power shutdown mode, consuming only 300- $\mu$ A shutdown quiescent current per channel. The THS3112/5 is packaged in a standard SOIC, SOIC PowerPAD<sup>TM</sup>, and TSSOP PowerPAD packages.

#### **VOLTAGE NOISE AND CURRENT NOISE**

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PowerPAD is a trademark of Texas Instruments.

#### **AVAILABLE OPTIONS**

		PACKAGED DE	VICE	_	EVALUATION.
TA	SOIC-8 SOIC-8 PowerPAD SOIC-14 (D) (DDA) (D)		TSSOP-14 (PWP)	MODULES	
0°C to 70°C	THS3112CD	THS3112CDDA	THS3115CD	THS3115CPWP	THS3112EVM
-40°C to 85°C	THS3112ID	THS3112IDDA	THS3115ID	THS3115IPWP	THS3115EVM

# absolute maximum ratings over operating free-air temperature (unless otherwise noted)†

Supply voltage, V <sub>CC+</sub> to V <sub>CC-</sub>	33 V
Input voltage	
Output current (see Note 1)	
Differential input voltage	
Maximum junction temperature	150°C
Total power dissipation at (or below) 25°C free-air temperature	See Dissipation Ratings Table
Operating free-air temperature, T <sub>A</sub> : Commercial	0°C to 70°C
Industrial	40°C to 85°C
Storage temperature, T <sub>stq</sub> : Commercial	–65°C to 125°C
Industrial	
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	300°C

<sup>†</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: The THS3112 and THS3115 may incorporate a PowerPAD™ on the underside of the chip. This acts as a heatsink and must be connected to a thermally dissipating plane for proper power dissipation. Failure to do so may result in exceeding the maximum junction temperature which could permanently damage the device. See TI Technical Brief SLMA002 for more information about utilizing the PowerPAD™ thermally enhanced package.

#### **DISSIPATION RATING TABLE**

PACKAGE	$AL^{\theta}$	T <sub>A</sub> = 25°C POWER RATING
D-8	95°C/W <sup>‡</sup>	1.32 W
DDA	67°C/W	1.87 W
D-14	66.6°C/W <sup>‡</sup>	1.88 W
PWP	37.5°C/W	3.3 W

<sup>‡</sup> This data was taken using the JEDEC proposed high-K test PCB. For the JEDEC low-K test PCB, the  $\theta$ JA is168°C/W for the D-8 package and 122.3°C/W for the D-14 package.
