1.0 Introduction

1.1 Description

The AU9462 is an integrated low cost single chip USB keyboard controller with 2-port hub. It supports the 19 x 8 keyboard matrix. Each key can be individually programmed for standard key code, ACPI or multimedia usage. It also supports combinational key definitions in the standard 19 x 8 key matrix.

Separated ACPI key is a special feature offered by AU9462. There is one pin dedicated for all-in-one ACPI function. Fn key function is designed to enable selection of alternative matrix for small size keyboard application.

The USB descriptors and keyboard matrix can be customized via an optional external 24C08 EEPROM, or directly select the internal ROMs for 8 different model keyboards. This feature makes customization of new projects cost-effective and efficient by adding an optional external EEPROM while still using the same chip for mass production. Alcor also provides utility program to simplify EEPROM contents programming.

The USB downstream ports can be used to connect various USB peripheral devices, such as USB printer, modem, scanner, camera, mouse and joystick to the system without adding external glue logic. Multimedia and shortcut keys can support volume control, CD/DVD Play/Pause, Stop, Eject, Mute and general purpose shortcut keys such as Internet, e-mail and help.

1.2 Features

- Fully compliant with the Universal Serial Bus Specification, version 1.1
- USB keyboard design is compliant with USB Device Class Definition for Human Interface Devices (HID), version 1.1
- Built-in 3.3v voltage regulator allows single +5V operating voltage drawing directly from USB bus
- Integrated USB full speed transceiver
- Support for 19 x 8 standard key matrix. An Fn pin to select alternative matrix. Each matrix location is flexible to be used as standard or any report ID & usage page code.
- Support separate ACPI keys. One pin dedicated for all-in-one ACPI function
- Each key can be individually programmed for standard key code, ACPI or multimedia usage
- Ability to configure the generic LEDs to blink on and off at a rate of 512ms.
- Additional LED1 and LED2.

- An additional LED2 for suspend special usage which will be turned on in suspend or can be defined by vendors
- Fn key toggles or selectable based on a configuration bit
- Extended delay key debounce timing option for any keys defined.
- USB vendor ID, product ID, and keyboard scan code table can be customized via optional external EEPROM.
- Contains 8K byte ROM to support 8 different keyboard models
- Runs at 12 Mhz frequency
- Integrated dual port power switch to eliminate the requirement of external power switch.
- Available in 64 pin LQFP package chips or probed for dies COB module

2.0 Application Block Diagram

The AU9462 is a single chip that integrates USB keyboard, ACPI and multimedia control functionalities. The multimedia function keys are designed to support a full range of hotkeys such as CD/DVD, Play/Pause, Stop, Eject, Mute and general purpose shortcut keys for one key Internet, E-mail, Help and etc.

3.0 Pin Assignment

Table 3-1. Pin Description

Pin	Pin Name	IO Type	Description
1	XTAL_1	Input	12MHz Crystal input
2	XTAL_2	Output	12MHz Crystal output
3	GNDA	Ground	
4	VCCA	Power	Analog power
5	NC		
6	DP2_PWROUT	Power	Port 2 power supply and over-current detection.
7	NC		
8	DP1_PWROUT	Power	Port 1 power supply and over-current detection.
9	NC		
10	VCC5V	Power	5v power supply
11	NC		
12	VCC3V	Power	3v power supply
13	USB_DM	Input/ Output	USB upstream D-
14	USB_DP	Input/ Output	USB upstream D+
15	USB1_DP	Input/ Output	USB downstream Port1 D+
16	USB1_DM	Input/ Output	USB downstream port1 D-
17	NC		
18	GNDIO	GROUND	
19	SCAN_R1	Input/ Output, Pull down	Row Scan line
20	NC		
21	USB2_DP	Input/ Output	USB downstream Port2 D+
22	USB2_DM	Input/ Output	USB downstream Port2 D-
23	NC		
24	SCAN_R2	Input/ Output, Pull down	Row Scan line
25	SCAN_R3	Input/ Output, Pull down	Row Scan line
26	SCAN_R4	Input/ Output, Pull down	Row Scan line
27	SCAN_R5	Input/ Output, Pull down	Row Scan line
28	SCAN_R6	Input/ Output, Pull down	Row Scan line
29	SCAN_R7	Input/ Output, Pull down	Row Scan line
30	SCAN_R8	Input/ Output, Pull down	Row Scan line
31	SCAN_R9	Input/ Output, Pull down	Row Scan line
32	SCAN_R10	Input/ Output, Pull down	Row Scan line
33	SCAN_R11	Input/ Output, Pull down	Row Scan line

34	SCAN_R12	Input/ Output, Pull down	Row Scan line
35	SCAN_R13	Input/ Output, Pull down	Row Scan line
36	SCAN_R14	Input/ Output, Pull down	Row Scan line
37	SCAN_R15	Input/ Output, Pull down	Row Scan line
38	SCAN_R16	Input/ Output, Pull down	Row Scan line
39	SCAN_R17	Input/ Output, Pull down	Row Scan line
40	SCAN_R18	Input/ Output, Pull down	Row Scan line
41	SCAN_R19	Input/ Output, Pull down	Row Scan line
42	SCAN_C1	INPUT,PULL UP	Column Scan line
43	SCAN_C2	Input, Pull up	Column Scan line
44	SCAN_C3	Input, Pull up	Column Scan line
45	SCAN_C4	Input, Pull up	Column Scan line
46	SCAN_C5	Input, Pull up	Column Scan line
47	SCAN_C6	Input, Pull up	Column Scan line
48	SCAN_C7	Input, Pull up	Column Scan line
49	SCAN_C8	Input, Pull up	Column Scan line
50	VCKK	Power	Core power
51	GNDK	Ground	
52	BIN	Input	Rotary encoder input 'B'
53	EEPENABLE	Input	Enable EEPROM function, =0 use internal ROM =1 use external EEPROM
54	AIN	Input	Rotary encoder input 'A'
55	ACPIKEYN	Input/ Pull up	Sleep, Shutdown, Wake up -(low active)
56	FNKEYN	Input/ Pull up	Selective alternative keyboard -(low active)
57	E2P_CLK	Input	EEPROM CLK/SEL2
58	E2P_DATA	Input	EEPROM data/SEL/
59	ROMSEL3	Input	ROMSEL3
60	SCROLL_LOCK	Output	Scroll_lock LED output-low active-open drain
61	CAPS_LOCK	Output	Cap lock LED – low active
62	NUM_LOCK	Output	Num lock LED – low active
63	LED1	Output	Additional LED 1 –low active
64	LED2	Output	Additional LED 2 – low active

5.0 Electrical Characteristics

5.1 Recommended Operating Conditions

SYMBOL	PARAMETER	MIN	TYP	MAX	UNITS
V _{CC}	Power Supply	4.75	5	5.25	V
V _{IN}	Input Voltage	0		3.3V	V
T _{OPR}	Operating Temperature	0		85	°C
T _{STG}	Storage Temperature	-40		125	°C

5.2 General DC Characteristics

SYMBOL	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
I _{IL}	Input low current	no pull-up or pull-down	-1		1	μA
I _{IH}	Input high current	no pull-up or pull-down	-1		1	μA
I _{OZ}	Tri-state leakage current		-10		10	μA
C _{IN}	Input capacitance			5		pF
C _{OUT}	Output capacitance			5		pF
C _{BID}	Bi-directional buffer capacitance			5		pF

5.3 DC Electrical Characteristics for 3.3 volts operation

SYMBOL	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
V _{IL}	Input Low Voltage	CMOS			0.9	V
V _{IH}	Input Hight Voltage	CMOS	2.3			V
V _{OL}	Output low voltage	I _{OL} =4mA, 16mA			0.4	V
V _{OH}	Output high voltage	I _{OH} =4mA,16mA	2.4			V

5.4 Crystal Oscillator Circuit Setup for Characterization

The following setup was used to measure the open loop voltage gain for crystal oscillator circuits. The feedback resistor serves to bias the circuit at its quiescent operating point and the AC coupling capacitor, C_s , is much larger than C_1 and C_2 .

5.5 ESD Test Results

Test Description : ESD Testing was performed on a Zapmaster system using the Human-Body –Model (HBM) and Machine-Model (MM), according to MIL_STD 883 and EIAJ IC_121 respectively.

- Human-Body-Model stress devices by sudden application of a high voltage supplied by a 100 PF capacitor through 1.5 Kohm resistance.
- Machine-Model stresses devices by sudden application of a high voltage supplied by a 200 PF capacitor through very low (0 ohm) resistance

Test circuit & condition

- Zap Interval : 1 second
- Number of Zaps : 3 positive and 3 negative at room temperature
- Criteria : I-V Curve Tracing

Model	Model	S/S	TARGET	Results
HBM	Vdd, Vss, I/C	15	4000V	Pass
MM	Vdd, Vss, I/C	15	200V	Pass

5.6 Latch-Up Test Results

Test Description: Latch-Up testing was performed at room ambient using an IMCS-4600 system which applies a stepped voltage to one pin per device with all other pins open except Vdd and Vss which were biased to 5 Volts and ground respectively.

Testing was started at 5.0 V (Positive) or 0 V(Negative), and the DUT was biased for 0.5 seconds.

If neither the PUT current supply nor the device current supply reached the predefined limit (DUT=0 mA , Icc=100 mA), then the voltage was increased by 0.1 Volts and the pin was tested again.

This procedure was recommended by the JEDEC JC-40.2 CMOS Logic standardization committee.

Notes:

1. DUT: Device Under Test.
2. PUT: Pin Under Test.

Test Circuit : Positive Input/ output Overvoltage /Overcurrent

Test Circuit : Negative Input/ Output Overvoltage /Overcurrent

Supply Voltage test

Latch-Up Data

Model	Model	Voltage (v)/ Current (mA)	S/S	Results
Voltage	+	11.0	5	Pass
	-	11.0		
Current	+	200	5	
	-	200		
Vdd-Vxx		9.0	5	Pass

6.0 Mechanical Information

Following diagrams show the dimensions of the AU9462 64-pin LQFP. Measurements are in inches.

body size		lead	A1	A2	L1	b	c	e
D1	E1	count						
10	10	64	0.1	1.4	1	0.2	0.127	0.5

A1		stand-off
A2		body thickness
L1		lead length
b		lead width
c		lead thickness
e		lead pitch
