

CT2 Front End IC

Description

U7001BG is a monolithic GaAs transmit/ receive front end with power amplifier, low noise amplifier and antenna switch. It is specially designed for operation in CT2 band and suitable for a frequency range of 839 MHz to 952 MHz with external matching.

Electrostatic sensitive device.

Observe precautions for handling.

Features

- Low supply voltage 3.6 V typical (min. 2.7 V)
- High power added efficiency (typ. 40%)
- Low power consumption in receive mode
- Power down control pin for low noise amplifier
- Gain control of power amplifier
- Low noise amplifier
- Optional high output power 50 mW @ 5 V supply voltage
- SSO20 plastic package

Benefits

- Extended talk time due to low power consumption and high PAE
- Few external components and very small package save space

Ozone Depleting Substances Policy Statement

It is the policy of **TEMIC TELEFUNKEN microelectronic GmbH** to

1. Meet all present and future national and international statutory requirements.
2. Regularly and continuously improve the performance of our products, processes, distribution and operating systems with respect to their impact on the health and safety of our employees and the public, as well as their impact on the environment.

It is particular concern to control or eliminate releases of those substances into the atmosphere which are known as ozone depleting substances (ODSs).

The Montreal Protocol (1987) and its London Amendments (1990) intend to severely restrict the use of ODSs and forbid their use within the next ten years. Various national and international initiatives are pressing for an earlier ban on these substances.

TEMIC TELEFUNKEN microelectronic GmbH semiconductor division has been able to use its policy of continuous improvements to eliminate the use of ODSs listed in the following documents.

1. Annex A, B and list of transitional substances of the Montreal Protocol and the London Amendments respectively
2. Class I and II ozone depleting substances in the Clean Air Act Amendments of 1990 by the Environmental Protection Agency (EPA) in the USA
3. Council Decision 88/540/EEC and 91/690/EEC Annex A, B and C (transitional substances) respectively.

TEMIC can certify that our semiconductors are not manufactured with ozone depleting substances and do not contain such substances.

We reserve the right to make changes to improve technical design and may do so without further notice.

Parameters can vary in different applications. All operating parameters must be validated for each customer application by the customer. Should the buyer use TEMIC products for any unintended or unauthorized application, the buyer shall indemnify TEMIC against all claims, costs, damages, and expenses, arising out of, directly or indirectly, any claim of personal damage, injury or death associated with such unintended or unauthorized use.
