## Octal D Flip-Flop with Clock Enable

The MC74AC377/74ACT377 has eight edge-triggered, D-type flip-flops with individual D inputs and Q outputs. The common buffered Clock (CP) input loads all flip-flops simultaneously, when the Clock Enable (CE) is LOW. The register is fully edge-triggered. The state of each D input, one setup time before the LOW-to-HIGH clock transition, is transferred to the corresponding flip-flop's Q output. The CE input must be stable only one setup time prior to the LOW-to-HIGH clock transition for predictable operation.

- Ideal for Addressable Register Applications
- Clock Enable for Address and Data Synchronization Applications
- Eight Edge-Triggered D Flip-Flops
- Buffered Common Clock
- Outputs Source/Sink 24 mA
- See MC74AC273 for Master Reset Version
- See MC74AC373 for Transparent Latch Version
- See MC74AC374 for 3-State Version
- ACT377 Has TTL Compatible Inputs
- MSL = 1 for all Surface Mount
- Chip Complexity: 292 FETS or 73 Gates

## PIN NAMES

| PIN                            | FUNCTION                  |
|--------------------------------|---------------------------|
| D <sub>0</sub> –D <sub>7</sub> | Data Inputs               |
| $\overline{\text{CE}}$         | Clock Enable (Active LOW) |
| Q <sub>0</sub> –Q <sub>7</sub> | Data Outputs              |
| CP                             | Clock Pulse Input         |

## MODE SELECT-FUNCTION TABLE

| Operating Mode    | Inputs     |                        |                | Outputs        |
|-------------------|------------|------------------------|----------------|----------------|
|                   | CP         | $\overline{\text{CE}}$ | D <sub>n</sub> | Q <sub>n</sub> |
| Load '1'          | $\uparrow$ | L                      | H              | H              |
| Load '0'          | $\uparrow$ | L                      | L              | L              |
| Hold (Do Nothing) | $\uparrow$ | H                      | X              | No Change      |
|                   | X          | H                      | X              | No Change      |

H = HIGH Voltage Level

L = LOW Voltage Level

X = Immaterial

$\uparrow$  = LOW-to-HIGH Clock Transition
