LH0062/LH0062C High Speed FET Operational Amplifier

General Description

The LH0062/LH0062C is a precision, high speed FET input operational amplifier with more than an order of magnitude improvement in slew rate and bandwidth over conventional FET IC op amps. In addition it features very closely matched input characteristics, very high input impedance, and ultra low input currents with no compromise in noise, common mode rejection ratio or open loop gain. The device has internal unity gain frequency compensation, thus assuring stability in all normal applications. This considerably simplifies its application, since no external components are necessary for operation. However, unlike most internally compensated amplifiers, external frequency compensation may be added for optimum performance. For inverting applications, feed-forward compensation will boost the slew rate to over 120 V/ μ s and almost double the bandwidth. (See LB-2, LB-14, and LB-17 for discussions of the application of feed-forward techniques). Over-compensation can be used with the amplifier for greater stability when maximum bandwidth is not needed. Further, a single capacitor can be added to reduce the 0.1% settling time to under 1 μ s. In addition it is free of latch-up and may be simply offset nulled with negligible effect on offset drift or CMRR.

The LH0062 is designed for applications requiring wide bandwidth, high slew rate and fast settling time while at the same time demanding the high input impedance and low input currents characteristic of FET inputs. Thus it is particularly suited for such applications as video amplifiers, sample/hold circuits, high speed integrators, and buffers for A/D conversion and multiplex system. The LH0062 is specified for the full military temperature range of -55° to +125°C while the LH0062C is specified to operate over a -25°C to +85°C temperature range.

Features

- High slew rate 70 V/ μ s
- Wide bandwidth 15 MHz
- Settling time (0.1%) 1 μ s
- Low input offset voltage 2 mV
- Low input offset current 1 pA
- Wide supply range $\pm 5V$ to $\pm 20V$
- Internal 6 dB/octave frequency compensation
- Pin compatible with std IC op amps (TO-5 pkg)

Absolute Maximum Ratings

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications. (Note 5)

Supply Voltage	$\pm 20V$
Power Dissipation (see graph)	500 mW
Input Voltage (Note 1)	$\pm 5V$
Differential Input Voltage (Note 2)	$\pm 30V$

Short Circuit Duration	Continuous
Operating Temperature LH0062	-55°C to +125°C
LH0062C	-25°C to +85°C
Storage Temperature Range	-65°C to +150°C
Lead Temperature (Soldering, 10 sec.)	260°C
ESD rating to be determined.	

DC Electrical Characteristics (Note 3)

Parameter	Conditions	Limits						Units	
		LH0062			LH0062C				
		Min	Typ	Max	Min	Typ	Max		
Input Offset Voltage	$R_S \leq 100 k\Omega$, $T_A = 25^\circ C$, $R_S \leq 100 k\Omega$		2	5		10	15	mV	
				7			20	mV

Input Noise Current	BW = 10 Hz to 10 kHz		<0.1			<0.1		pArms	

Note 1: For supply voltages less than $\pm 15\text{V}$, the absolute maximum input voltage is equal to the supply voltage.

Note 2: Inputs are protected from excessive voltages by back-to-back diodes. Input currents should be limited to 1 mA.

Note 3: Unless otherwise specified, these specifications apply for $\pm 5\text{V} \leq V_S \leq \pm 20\text{V}$ and $-55^\circ\text{C} \leq T_A \leq +125^\circ\text{C}$ for the LH0062 and $-25^\circ\text{C} \leq T_A \leq +85^\circ\text{C}$ for the LH0062C. Typical values are given for $T_A = 25^\circ\text{C}$. Power supplies should be bypassed with 0.1 μF ceramic capacitors.

Note 4: Input currents are a strong function of temperature. Due to high speed testing they are specified at a junction temperature $T = 25^\circ\text{C}$, self heating will cause an increase in current in manual tests. 25°C spec is guaranteed by testing at 125°C.

Note 5: Refer to RETS0062X for LH0062D and LH0062H military specifications.
