

PWM/PFM Dual-mode Step-Down Switching Regulator

■ Features

- Low current consumption:
In operation: 100μA max.
Power off: 2μA max.
- Input voltage: 2.5V to 7V.
Adjustable version ($\pm 2.5\%$)
- PWM/PFM dual Mode
- Oscillation frequency: 300KHz (Typ.)
- With a power-off function.
- Built-in internal SW P-channel MOS
- SOP-8L/TSSOP-8L Package.

■ Applications

- On-board power supplies of battery devices for portable telephones, electronic notebooks, PDA, and other hand-held sets.
- Power supplies for audio equipment, including portable CD players and headphone stereo equipment.
- Fixed voltage power supply for cameras, video equipment and communications equipment.
- Power supplies for microcomputers.
- Conversion from four Ni-H or Ni-Cd cells or two lithium-ion cells to 3.3V/3V.
- Conversion of AC adapter input to 5V/3V.

■ Pin Assignments

■ General Description

AP1605 consists of CMOS step-down switching regulator with PWM/PFM dual mode control. These devices include a reference voltage source, oscillation circuit, error amplifier, internal PMOS and etc.

AP1605 provides low-ripple power, high efficiency, and excellent transient characteristics. The PWM/PFM control circuit is able to vary the duty ratio linearly 0%~0.25% (PFM) and 25%~100% (PWM).

With the addition of an internal P-channel Power MOS, a coil, capacitors, and a diode connected externally, these ICs can function as step-down switching regulators. They serve as ideal power supply units for portable devices when coupled with the SOP-8L mini-package, providing such outstanding features as low current consumption. Since this converter can accommodate an input voltage of up to 7V, it is also ideal when operating via an AC adapter.

■ Pin Descriptions

Pin Name	Pin No.		Description
	SOP	TSSOP	
FB	1	4	Feedback pin
CE	2	2、3	Chip Enable: H: Enable L: Disable
Vcc	3	5	IC signal power supply pin, add a 10Ω resistor to PVcc and a 0.1μF capacitor to GND.
PVcc	4	6、7	IC power supply pin
SW	5、6	8	Switch Pin. Connect external inductor/diode here. Minimize trace area at this pin to reduce EMI.
Vss	7、8	1	GND Pin

■ Absolute Maximum Ratings

Symbol	Parameter		Rating	Unit
V_{CC}^{*1}	V _{CC} Pin Voltage		$V_{SS} - 0.3$ to $V_{SS} + 8$	V
PV _{CC}	PV _{CC} Pin Voltage		$V_{SS} - 0.3$ to $V_{SS} + 8$	V
FB	FB Pin Voltage		$V_{SS} - 0.3$ to $V_{SS} + 8$	V
V _{CE}	ON/OFF Pin Voltage		$V_{SS} - 0.3$ to $V_{SS} + 8$	V
V _{SW}	Switch Pin Voltage		$V_{SS} - 0.3$ to $V_{IN} + 0.3$	V
P _D	Power Dissipation	SOP-8L	1200	mW
		TSSOP-8L	700	
T _{OPR}	Operating Temperature Range		-20 to +85	°C
T _{STG}	Storage Temperature Range		-20 to +125	°C

Caution: The absolute maximum ratings are rated values exceeding which the product could suffer physical damage. These values must therefore not be exceeded under any conditions.

■ Function Description

PWM/PFM Control (AP1605 Series)

The AP1605 consists of DC/DC converters that employ a PWM/PFM auto-switch system.

In converters of the AP1605, the PFM mode varies in a range of duty cycle from 0% to 25%, and the PWM mode varies in a range of duty cycle from 25% to 100% according to the load current, and yet ripple voltage produced by the switching can easily be removed through a filter because the switching frequency remains constant. Therefore, these converters provide a low-ripple power over broad ranges of input voltage and load current.
