- Members of the Texas Instruments Widebus ${ }^{\text {TM }}$ Family
- State-of-the-Art Advanced BiCMOS

Technology (ABT) Design for 3.3-V Operation and Low Static-Power Dissipation

- Support Mixed-Mode Signal Operation (5-V Input and Output Voltages With $3.3-\mathrm{V} \mathrm{V}_{\mathrm{Cc}}$ )
- Support Unregulated Battery Operation Down to 2.7 V
- Typical VOLP (Output Ground Bounce) $<0.8 \mathrm{~V}$ at $\mathrm{V}_{\mathrm{CC}}=3.3 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$
- $l_{\text {off }}$ and Power-Up 3-State Support Hot Insertion
- Bus Hold on Data Inputs Eliminates the Need for External Pullup/Pulldown Resistors
- Distributed $\mathrm{V}_{\mathrm{Cc}}$ and GND Pins Minimize High-Speed Switching Noise
- Flow-Through Architecture Optimizes PCB Layout
- Latch-Up Performance Exceeds 500 mA Per JESD 17
- ESD Protection Exceeds JESD 22
- 2000-V Human-Body Model (A114-A)
- 200-V Machine Model (A115-A)

## description/ordering information

The 'LVTH16374 devices are 16-bit edge-triggered D-type flip-flops with 3-state outputs designed for low-voltage $(3.3-\mathrm{V}) \mathrm{V}_{\mathrm{CC}}$ operation, but with the capability to provide a TTL interface to a $5-\mathrm{V}$ system environment. These devices are particularly suitable for implementing buffer registers, I/O ports, bidirectional bus drivers, and working registers.

ORDERING INFORMATION

## 3.3-V ABT 16-BIT EDGE-TRIGGERED D-TYPE FLIP-FLOPS

## description/ordering information (continued)

These devices can be used as two 8-bit flip-flops or one 16-bit flip-flop. On the positive transition of the clock (CLK), the Q outputs of the flip-flop take on the logic levels set up at the data (D) inputs.
A buffered output-enable ( $\overline{\mathrm{OE}})$ input can be used to place the eight outputs in either a normal logic state (high or low logic levels) or a high-impedance state. In the high-impedance state, the outputs neither load nor drive the bus lines significantly. The high-impedance state and the increased drive provide the capability to drive bus lines without need for interface or pullup components.
$\overline{\mathrm{OE}}$ does not affect internal operations of the flip-flop. Old data can be retained or new data can be entered while the outputs are in the high-impedance state.

Active bus-hold circuitry holds unused or undriven inputs at a valid logic state. Use of pullup or pulldown resistors with the bus-hold circuitry is not recommended.

When $\mathrm{V}_{\mathrm{CC}}$ is between 0 and 1.5 V , the devices are in the high-impedance state during power up or power down. However, to ensure the high-impedance state above 1.5 V , $\overline{\mathrm{OE}}$ should be tied to $\mathrm{V}_{\mathrm{CC}}$ through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.
These devices are fully specified for hot-insertion applications using $I_{\text {off }}$ and power-up 3 -state. The $I_{\text {off }}$ circuitry disables the outputs, preventing damaging current backflow through the devices when they are powered down. The power-up 3-state circuitry places the outputs in the high-impedance state during power up and power down, which prevents driver conflict.

## absolute maximum ratings over operating free-air temperature range (unless otherwise noted) $\dagger$

$\qquad$
Supply voltage range, $\mathrm{V}_{\mathrm{CC}}$
-0.5 V to 4.6 V
Input voltage range, $\mathrm{V}_{\mathrm{I}}$ (see Note 1) -0.5 V to 7 V
Voltage range applied to any output in the high-impedance
or power-off state, $\mathrm{V}_{\mathrm{O}}$ (see Note 1)
-0.5 V to 7 V
Voltage range applied to any output in the high state, $\mathrm{V}_{\mathrm{O}}$ (see Note 1) $\ldots . . . . . . .$.
Current into any output in the low state, $\mathrm{I}_{\mathrm{O}}:$ SN54LVTH16374 ....................................... 96 mA
SN74LVTH16374 .......................................... 128 mA
Current into any output in the high state, $\mathrm{I}_{\mathrm{O}}$ (see Note 2): SN54LVTH16374 ....................... 48 mA
SN74LVTH16374 ........................ 64 mA

Package thermal impedance, $\theta_{\mathrm{JA}}$ (see Note 3): DGG package ................................... $70^{\circ} \mathrm{C} / \mathrm{W}$
DL package ........................................... 63²ㅇ/W
GQL/ZQL package .................................. $42^{\circ} \mathrm{C} / \mathrm{W}$
Storage temperature range, $T_{\text {stg }}$
$-65^{\circ} \mathrm{C}$ to $150^{\circ} \mathrm{C}$
$\dagger$ Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
NOTES: 1. The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
2. This current flows only when the output is in the high state and $V_{O}>V_{C C}$.
3. The package thermal impedance is calculated in accordance with JESD 51-7.
recommended operating conditions (see Note 4)

NOTE 4: All unused control inputs of the device must be held at $\mathrm{V}_{\mathrm{C}}$ or GND to ensure proper device operation. Refer to the TI application report, Implications of Slow or Floating CMOS Inputs, literature number SCBA004.

## PARAMETER MEASUREMENT INFORMATION

| TEST | S1 |
| :---: | :---: |
| tPLH/tPHL | Open |
| tPLZ/tPZL | 6 V |
| tPHZ/tPZH | GND |

NOTES: A. $C_{L}$ includes probe and jig capacitance.
B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
C. All input pulses are supplied by generators having the following characteristics: $\mathrm{PRR} \leq 10 \mathrm{MHz}, \mathrm{Z}_{\mathrm{O}}=50 \Omega, \mathrm{t}_{\mathrm{r}} \leq 2.5 \mathrm{~ns}, \mathrm{t}_{\mathrm{f}} \leq 2.5 \mathrm{~ns}$.
D. The outputs are measured one at a time with one transition per measurement.

${ }^{(1)}$ The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but Tl does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.
${ }^{(2)}$ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS) or Green (RoHS \& no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The $\mathrm{Pb}-\mathrm{Free} / \mathrm{Green}$ conversion plan has not been defined.
Pb -Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed $0.1 \%$ by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb -Free products are suitable for use in specified lead-free processes.
Green (RoHS \& no $\mathbf{S b} / \mathrm{Br}$ ): TI defines "Green" to mean Pb -Free (RoHS compatible), and free of Bromine ( Br ) and Antimony ( Sb ) based flame retardants ( Br or Sb do not exceed $0.1 \%$ by weight in homogeneous material)
${ }^{(3)}$ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to Tl's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with Tl's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI .

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. Tl is not responsible or liable for such altered documentation.

Resale of Tl products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. Tl is not responsible or liable for any such statements.

[^0]:    * On products compliant to MIL-PRF-38535, this parameter is not production tested.
    $\dagger$ All typical values are at $\mathrm{V}_{\mathrm{CC}}=3.3 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$.
    $\ddagger$ This is the bus-hold maximum dynamic current. It is the minimum overdrive current required to switch the input from one state to another.
    § This is the increase in supply current for each input that is at the specified TTL voltage level, rather than VCC or GND.
